Re: Phase I Environmental Site Assessment
American Museum of Natural History
Portions of the American Museum of Natural History and Theodore Roosevelt Park
New York, New York
AKRF Project Number: 12166

Dear Ms. Golden:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Phase I Site. This report includes the findings of a reconnaissance of the Phase I Site, and an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13, unless noted otherwise in Section 8.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

A handwritten signature in black ink, appearing to read 'M. Godick'.

Marc S. Godick, LEP
Senior Vice President

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by the American Museum of Natural History (the Museum) to perform a Phase I Environmental Site Assessment of portions of the Museum comprising Sections 1, 7A, 8, 11, 11A, 11B, 15, 15A, 16, and 17, Weston Pavilion, the exterior yard and service yard, the former shooting range, and an approximately 76,000-square foot (SF) portion of Theodore Roosevelt Park, collectively referred to as the Phase I Site. The Phase I Site, along with the remainder of the Museum grounds and sections, is located at 200 Central Park West (also identified as Manhattan Tax Block 1130, part of Lot 1) and is located on New York City-owned mapped parkland under the jurisdiction of the New York City Department of Parks and Recreation (NYC Parks), as shown on Figure 1. The Phase I Site boundary is shown on Figure 2.

Uses within the Museum portions of the Phase I Site include public exhibition spaces and non-public spaces for the American Museum of Natural History. Non-public spaces include interior and exterior chemical storage spaces, aboveground storage tank (AST) rooms, outdoor underground storage tank (UST) areas, specimen storage areas, garages, offices, research spaces, libraries, educational-use spaces, and non-chemical storage areas. This Phase I Environmental Site Assessment was prepared to support the proposed construction of the Gilder Center, and related renovation and demolition, at the Museum, collectively referred to as the Project.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term “Recognized Environmental Condition” or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Phase I Site: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Historically, the Phase I Site was Museum-leased since approximately 1874. Historic Sanborn maps indicate that in 1902 the Phase I Site was primarily vacant with the exception of Section 1 located in the southeastern portion of the Phase I Site. Various additions were identified on Sanborn maps between 1912 and 2000, with Section 16 identified most recently on the 2007 Sanborn map. Throughout their history, the Phase I Site buildings were primarily used for exhibitions, research, maintenance, and educational purposes associated with the Museum. Sections 15 and 15A were identified as a storage structure and auto house on Sanborn maps dated 1951 through 1989. Though Sanborn maps indicate that Sections 15 and 15A were then used as a Power House and Boiler House through 1989, prior reports indicate that Sections 15 and 15A were converted to a garage in approximately 1933, and into the current Ichthyology Department space in approximately 1965. Section 17 historically housed a coal-fired electric power plant until the 1960s, when the Museum converted to alternating current.

Throughout its history, the Phase I Site was bounded to the north by West 81st Street, followed by residential areas; to the east by portions of the Museum outside of the Phase I Site boundary; to the south by West 77th Street, followed by residential and institutional uses; and to the west by Columbus Avenue, followed by multi-story residential and commercial buildings. Central Park and other portions of the Museum and Theodore Roosevelt Park were located east of the Phase I Site.

As part of the environmental review process for the proposed project, this Phase I ESA report and a Subsurface Investigation (Phase II) Work Plan would be submitted to the New York City Department of

Environmental Protection (DEP) for review and approval to evaluate any RECs identified as part of this assessment, as described below:

Recognized Environmental Conditions (RECs)

- Historic chemical storage and use at the Phase I Site that might represent RECs included:

Section 16 – One 1,080-gallon diesel fuel oil AST located within an epoxy-coated room with secondary containment berm;

Section 17 - One empty 250-gallon parts washer tank formerly containing trichloroethylene (TCE), and a 500-gallon double-wall AST day tank located on the first floor (associated with the AST located in Section 16); and

Exterior yard - Drums (up to 55 gallons) of ethanol, isopropanol, research space waste, and diesel in chemical storage sheds. Chemical storage sheds included secondary containment systems, and are regularly inspected to prevent spillage. Floor drains noted in the exterior yard and other areas throughout the Phase I Site were reported to be connected to the municipal sewer system but were in good condition with no evidence of releases or spills. Spill prevention kits were also identified in the drum storage area.

Regulatory databases identified the Museum as a small quantity generator (SQG) of hazardous waste from 2005 to 2016, and historical large quantity generator (LQG) of hazardous waste from 1984 to 2005. Chemical waste was disposed of by Clean Harbors, a permitted chemical waste hauler.

Although chemical storage areas are FDNY-permitted, with no evidence of a release noted on or concerning the Phase I Site, the locations of historical on-site use of chemicals (including chlorinated solvents) for specimen preservation and diesel fuel for Phase I Site operations and maintenance will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

- The Museum is registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database with four ASTs and two USTs, with three ASTs and one UST located at the Phase I Site.

Although on-site storage tank controls, including secondary containment in the form of curbs or double-wall construction, interstitial alarms, high level alarms and BMS management were noted with no evidence of a release noted on or concerning the Phase I Site, the locations of historical on-site storage of fuel oil in USTs and ASTs will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

- The historical uses of Section 17 (the Power House) included use as a coal-fired electric power plant and of Section 15 included use as an auto house and power house. During the reconnaissance, no evidence of coal storage or residue was observed and there is, therefore, no present information indicating that the Project is expected to be complicated by the former presence of the power house and auto house uses. These areas will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

De Minimis Conditions

- Arsenic-preserved hide storage was noted in dedicated areas on the fifth floor of Section 1, and on the third floor of Section 7A. Arsenic-preservation was a common preservation technique for natural

history collections used between approximately 1930 and 1990. Preserved hides were stored in designated cabinets.

- The chemical storage area in Section 8 was noted on the fifth floor in an FDNY-permitted room with a secondary containment berm. Chemicals stored included 1 liter to 5 gallons in volume, of 1-butanol, ethyl alcohol, toluene, and other specimen preservation-related solvents, with no record of historic release.
- Chemical storage was noted in Section 11B on the lower level and fourth floors and included nitrate film negatives and acetate film roll storage.
- Chemical storage noted in Section 15 in the Ichthyology collections included approximately 300,000 small jars (up to five gallons) of specimens preserved in ethanol or isopropanol, large containers and drums (up to 55 gallons) of ethanol used for specimen preservation, and other containers (generally 15 gallons or less) of organic solvents, and solvent wastes.
- Additional chemical storage noted in Section 17 included small containers (up to one gallon) of polyester resins, spray paints, and acids in the exhibition production shop on the fifth floor.
- Additional chemical storage noted in the exterior yard included 55-gallon drums of food oil waste, and liquid nitrogen in a 3,000-gallon AST.
- A proposed 30,000-gallon UST was shown on 1962 engineering plans for Section 17 (the Power House). However, no documentation of the UST installation was found. Museum representatives do not believe the tank was installed, and the Museum was reported to have converted from coal to Consolidated Edison steam as a heating source around the time the plans were prepared; thus, it appears the proposed UST was never installed.
- One closed-in-place 1,080-gallon double-wall UST with interstitial monitoring and high-level alarm was identified in the Exterior Yard. This UST was associated with the former 50-gallon day tank AST identified in Section 1.
- The following petroleum storage tanks were located in Museum areas outside of the Phase I Site boundary: one in-service 6,000-gallon double-wall fiberglass reinforced plastic UST containing and one in-service 200-gallon double-wall AST, both containing diesel fuel and supplying an emergency generator. These tanks were located in a courtyard in the southwestern portion of the Museum, outside of the Phase I Site boundary. No odors, staining, or spills were noted in the vicinity of the AST and no related historic spills were documented.
- Based on the age of the Museum sections and prior subsurface investigations which identified historic fill in the northern portion of Theodore Roosevelt Park, historic fill materials may also be present beneath the Phase I Site.

Other Considerations (outside scope of ASTM Standard E1527-13)

The following items were identified as part of the Phase I ESA and are considered outside of the ASTM Standard E-1527-13. Provided that the Museum continues to manage these items in accordance with applicable regulatory requirements, the following are not considered significant concerns.

- Based on the age of the Museum sections, asbestos-containing materials (ACM) may be present. Suspect ACM observed during the reconnaissance included: window glazing and caulking, drywall, plaster, vinyl floor tiles and associated mastic, ceramic tile mastic, suspended ceiling tiles, ventilation duct and thermal pipe insulation, and spray-on fireproofing, generally noted to be in good condition with the exception of surfaces within the former shooting range and some stairway walls within

Section 1. Museum representatives stated that the Phase I Site buildings had been surveyed for asbestos and an asbestos management plan was in place. Various abatement activities have been conducted as part of renovations and expansions, and reassessments are conducted prior to any construction activities.

- Based on the age of the Museum sections, lead-based paint may be present in any areas which were not recently renovated. Painted surfaces were generally noted to be in good condition with the exception of surfaces within the below-grade former shooting range and some stairway walls within Section 1.
- Based on the age of the Museum sections, any window caulking, electrical equipment, hydraulic equipment, or fluorescent lighting fixtures installed prior to 1979 may contain PCBs. Any fluorescent bulbs and switches may also contain mercury. No obvious leaks or odors were observed in connection with observed equipment or lighting fixtures in viewed accessible areas.

Potential for Vapor Migration

Due to the use and storage of chemicals on the Phase I Site, a potential for subsurface vapor intrusion may exist. Following any future subsurface testing, potential vapor mitigation of existing or future buildings would be assessed.

Conclusions

Although chemical storage areas are maintained as required, the Museum employs protective measures against releases, and there has been no evidence of a release noted on or concerning the Phase I Site, the locations of historical on-site storage of chemicals and fuel oil, as well as the location of the historical use of Section 17 (the Power House) as a coal-fired electric power plant and Section 15 as an auto house and power house, will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

Prior to commencing development activities involving significant subsurface disturbance, a Phase II subsurface investigation, including soil, groundwater and soil vapor sampling and an inspection of the drain in the chemical storage yard, would be conducted to assess subsurface conditions at the Phase I Site.

During any subsurface disturbance, surplus excavated soil and debris would be handled and disposed of in accordance with applicable regulatory requirements. Evidence of a spill (if any) located or found during future investigation or disturbance would be reported to NYSDEC and addressed in accordance with applicable requirements. If subsurface investigation findings indicate that potential vapor intrusion concerns exist, the potential inclusion of vapor mitigation measures, including vapor barriers and sub-slab venting systems, would be evaluated.

If the conclusions of the Phase II investigation indicate any condition that would require a Remedial Action Plan (RAP) and associated Construction Health and Safety Plan (CHASP), then prior to the start of the proposed development work, a RAP and CHASP would be prepared and submitted to the NYCDEP for review and approval, which would summarize all environmental mitigation measures designed to protect against the potential for human or environmental exposure to known or unexpectedly encountered hazardous materials during and following construction of the proposed development. The RAP and CHASP would be implemented throughout the duration of project construction.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by the American Museum of Natural History (the Museum) to perform a Phase I Environmental Site Assessment of portions of the Museum comprising Sections 1, 7A, 8, 11, 11A, 11B, 15, 15A, 16, and 17, Weston Pavilion, the exterior yard and service yard, former shooting range, and an approximately 76,000-square foot (SF) portion of Theodore Roosevelt Park, collectively referred to as the Phase I Site. The Phase I Site, along with the remainder of the Museum grounds and sections, is located at 200 Central Park West (also identified as Manhattan Tax Block 1130, part of Lot 1) and is located on New York City-owned mapped parkland under the jurisdiction of the New York City Department of Parks and Recreation (NYC Parks), as shown on Figure 1. The Phase I Site boundary is shown on Figure 2.

Uses within the Museum portions of the Phase I Site include public exhibition spaces and non-public spaces for the American Museum of Natural History. Non-public spaces include interior and exterior chemical storage spaces, aboveground storage tank (AST) rooms, outdoor underground storage tank (UST) areas, specimen storage areas, garages, offices, research spaces, libraries, educational-use spaces, and non-chemical storage areas. This Phase I Environmental Site Assessment was prepared to support the proposed construction of the Gilder Center, and related renovation and demolition, at the Museum, collectively referred to as the Project.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I ESA Practice*). Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Phase I Site (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Phase I Site.
- The reconnaissance of the Phase I Site included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps for the Phase I Site and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Phase I Site and other Phase I Site within the ASTM-defined radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the Phase I Site and other properties within predetermined radii: petroleum and hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Disposal Site Draft Study; Hazardous Waste Treatment, Storage or Disposal Facilities; Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP); and Historic Utility Sites.
- Local agency reviews including NYC Fire Department records (obtained as part of the database search), online Buildings and Finance Departments records, and Environmental Quality Review (CEQR) E Designation Sites were conducted for the Phase I Site only.

2.0 PHYSICAL SITE DESCRIPTION

On June 3, 2016, AKRF conducted a reconnaissance of the Phase I Site accompanied by the Museum's Senior Director of Human Resources and Environmental, Health and Safety, who answered pertinent questions. Additional inspections were conducted on July 17, 2015 with the Senior Director of Human Resources and Environmental, Health and Safety, on March 18, 2016 with a member of the Museum's Facilities Operations Department, and on October 25, 2016 with the Senior Director of Human Resources and Environmental, Health and Safety. Neighboring properties were also viewed, but only from public rights-of-way. On June 3, 2016, the weather was cloudy and approximately 80 °F, the visibility was good, and the premises were generally adequately illuminated. Photographs from the reconnaissance are included as Appendix A. The Phase I Site boundary is indicated on Figure 2.

2.1 General Site Conditions

The Phase I Site consisted of portions of Museum Sections 1, 7A, 8, 11, 11A, 11B, 15, 15A, 16, 17, Weston Pavilion, the exterior yard and additional service yard, the former shooting range, and an approximately 200,000-SF portion of Theodore Roosevelt Park. The Phase I Site primarily comprised public exhibition spaces and non-public spaces for the American Museum of Natural History. Non-public spaces included interior and exterior chemical storage spaces, research space with a former parts washer, AST rooms, outdoor UST areas, specimen storage areas, garages, offices, educational-use spaces, libraries, and non-chemical storage areas.

Museum construction comprised brick and CMU block construction, with finishing materials including stone, concrete, sheetrock, plaster, paint, 12- by 12-inch floor tiles, suspended ceiling tiles, carpeting, and exposed spray fireproofing and piping insulation. The finishing materials in the inspected areas were generally observed to be in good condition.

Building materials were in good condition with isolated areas containing peeling paint or water damage. Phase I Site buildings were illuminated by fluorescent and incandescent lights, served by electrical and hydraulic elevators, and heated by steam provided by Consolidated Edison (Con Ed). A description of the Phase I Site Sections and any areas with significant chemical storage or would otherwise be likely to impact the findings and recommendations presented within this report are discussed in further detail below.

Section 1

Section 1 comprised a five-story (plus lower level) structure primarily used as Museum exhibition and research spaces. A generator room was noted on the lower level. According to the Senior Director of Human Resources, a former 50-gallon AST day tank was located in the generator room until September 2016, when it was emptied and removed. Arsenic-preserved animal hides

were noted in a dedicated area on the fifth floor. Arsenic-preservation was a common preservation technique used between approximately 1930 and 1990. The development plan for Section 1 comprises selective demolition of the structure.

Section 7A

Section 7A comprised a three-story (plus lower level) structure used as Museum research and exhibition spaces. Arsenic-preserved animal hides were noted in a dedicated area on the third floor. The development plan for Section 7A comprises selective demolition of the structure.

Section 8

Section 8 comprised a five-story (plus lower level) structure primarily used as Museum exhibition and research spaces. A chemical storage closet, containing 1 liter to 5-gallon containers of 1-butanol, ethyl alcohol, toluene, and other specimen preservation-related solvents, and an emergency shower and eye wash station, were located in a fifth floor storage room, fitted with a secondary containment curb. According to Museum personnel, the storage room is permitted by the New York City Fire Department (FDNY), and no spills were reported within the space. The development plan for Section 8 comprises selective demolition on all floors except the fourth and fifth floors.

Former Shooting Range – North-adjacent to Section 8

The former shooting range space comprised an approximately 1,200-SF L-shaped, brick and mortar constructed space, located north-adjacent to Section 8 and extending underneath the western landscaped portion of Theodore Roosevelt Park. The former shooting range was predominantly vacant with some storage of miscellaneous unused items such as shelving and small wooden furniture.

Utilities located in the space included overhead and wall-mounted mechanical piping with paint and insulation, and overhead light fixtures, most of which appeared unused and in poor condition. Based on feedback from the Senior Director of Human Resources and Environmental, Health and Safety, the space was used as a shooting range in approximately 1940 and subsequently used as a storage space for rock specimens, some of which were identified as naturally radioactive, until the 2000s, when the contents of the space were relocated to portions of the Museum outside the Phase I Site boundary. Based upon licensing and storage procedures, residual radiation from previous specimen storage is not anticipated to be a concern.

Section 11

Section 11 comprised a five-story (plus lower level) structure primarily used as Museum exhibition spaces, and library and research spaces with no significant chemical storage areas. The development plan for Section 11 comprises selective demolition on floors two, three, and four.

Section 11A

Section 11A comprised a two-story (plus lower level) structure primarily used as office and educational spaces with some cleaning chemical storage noted on the first floor and no other significant chemical storage areas. The development plan for Section 11A comprises selective demolition on both floors.

Section 11B

Section 11B comprised a four-story (plus lower level) structure primarily used as Museum rare books library and exhibition spaces, with some nitrate film negatives and acetate film roll storage on the lower level and fourth floor, respectively. Neither of the film storage areas comprise

significant chemical storage, and no other significant chemical storage areas were present in Section 11B. The development plan for Section 11B comprises selective demolition on floors two and four.

Section 15 Ichthyology Building

Section 15 comprised a three-story (plus lower level) structure used as Ichthyology Department specimen rooms, mechanical rooms, and Department of Gems and Minerals storage in the lower level, two Ichthyology research spaces on the first floor, and Ichthyology Department offices and specimen rooms on the second and third floors. The development plan for Section 15 comprises selective demolition of the structure.

Chemical storage in the Section 15 included: approximately 300,000 small jars (up to five gallons) of specimens preserved in ethanol or isopropanol; large containers and drums (up to 55 gallons) of ethanol used for specimen preservation; and small containers (generally 15 gallons or less) of rotenone (a piscicide stored on-site designated for off-site use only), organic solvents, and solvent wastes. All containers were noted to be clearly labeled and neatly stored, with no evidence of a release and no records of releases according to Museum representatives. According to the Senior Director of Human Resources and Environmental, Health and Safety, all chemical storage areas within Section 15 are FDNY-permitted spaces, and all Section 15 chemicals will be moved to a location outside of the Phase I Site boundary prior to development.

Section 15A

Section 15A comprised a one story structure primarily used as Museum storage and mechanical spaces with no significant chemical storage areas. The development plan for Section 15A comprises selective demolition of the structure.

Section 16

Section 16 comprised a three-story structure primarily used as a parking garage and outdoor recreation space. The development plan for Section 16 includes limited alteration of the structure.

A 1,080-gallon diesel AST was noted in a dedicated room in Section 16, adjacent to the parking garage space. The AST room was finished with an epoxy coating, creating a secondary containment space around the tank. A small cleanout cover was noted in the southeastern corner of the tank room. According to the Senior Director of Human Resources and Environmental, Health and Safety, the AST is equipped with an overfill alarm connected to the Museum's Building Management System (BMS) as well as to a monitoring panel located in Section 17.

Section 17 Former Power House

Section 17 comprised a five-story (plus lower level) structure used as mechanical rooms in the lower level, science research spaces on the first floor, storage and event space and offices on the second and third floors, and an exhibition production shop and Exhibition Department offices on the fifth floor. The development plan for Section 17 comprises selective demolition of the structure.

A 500-gallon double-wall day tank associated with the 1,080-gallon AST, located in Section 16, was identified in a tank room on the first floor. According to the Senior Director of Human Resources and Environmental, Health and Safety, the 500-gallon day tank is connected to the BMS, and conveyance piping from the 1,080-gallon AST to the 500-gallon day tank comprises double-wall piping, pitched towards the 1,080-gallon tank.

Chemical storage in Section 17 included an empty 250-gallon parts washer tank formerly containing trichloroethylene (TCE), used for degreasing within a research space and parts washer room area. According to the Senior Director of Human Resources and Environmental, Health and Safety, the parts washer tank formerly containing TCE was permitted for air discharges and is located in a FDNY-permitted research space with no record of spills or releases. The tank was emptied in October 2016, and TCE was handled on-site and disposed of off-site in accordance with all local, state, and federal requirements. Additional chemical storage in Section 17 included small containers (generally five gallons or less) of formalin and organic solvents used for conservation of specimens. The exhibition production shop contained some chemical storage, including small containers (up to one gallon) of polyester resins, spray paints, and acids. All containers were noted to be clearly labeled and neatly stored, with no evidence of a release or records of releases according to Museum personnel.

According to the Senior Director of Human Resources and Environmental, Health and Safety, the parts washer was installed in 1999 and has not been used since 2008. During the inspection, the parts washer was observed to be in good condition with no indication of damage or breaches that may have resulted in leaks. Minimal oil-like staining was noted in a secondary containment area underneath the parts washer that housed washer-related motors and pumps. A floor drain was noted, reported to be connected to the combined sewer, in the center of the parts washer room, with no indications of recent releases.

Weston Pavilion

Weston Pavilion comprised a two-story structure, primarily used as Museum lobby and ticket sales space with no significant chemical storage areas. The development plan for Weston Pavilion comprises selective demolition of the structure.

Exterior Yard with Chemical Storage Yard and Additional Service Yard

An exterior yard with a fence-enclosed chemical storage yard was noted in an approximately 1,000-SF area in the center of the Phase I Site (adjacent to Sections 7A, 15, and 16). The chemical storage yard, located in the northeastern portion of the exterior yard, contained three chemical storage sheds, and an empty drum storage area with an emergency shower, eye wash station, spill kit, and fire extinguisher. The chemical storage sheds comprised modified, elevated shipping containers, which provide covered, secondary containment. Chemicals stored in the sheds included 55-gallon drums of ethanol, gasoline, isopropanol, and diesel, and 55-gallon drums and one-gallon containers of various chemicals from the Museum research spaces. According to the Senior Director of Human Resources and Environmental, Health and Safety, all three sheds are FDNY-permitted with no records of historic releases. The sheds will be relocated outside of the Phase I Site boundary prior to development work.

Two 55-gallon drums of yellow grease (used cooking oil) were noted in the exterior yard outside of the chemical storage area, elevated above the ground on a containment pallet with a protective cover.

A 3,000-gallon liquid nitrogen tank, protected by bollards, was noted on the southern end of the exterior yard. According to the Senior Director of Human Resources and Environmental, Health and Safety, the liquid nitrogen tank is FDNY-permitted with no records of historic releases. The tank will be relocated outside of the Phase I Site boundary prior to development work.

Utilities noted in the area comprised a minimum of three chemical storage yard drains, two exterior yard trench drains, three sewer-related manhole covers, additional manways in the exterior yard, and two approximately 2-foot diameter steam heating pipes extending from the

subgrade into the south-adjacent Section 15. The subgrade portions of the steam heating pipes were noted extending north-south underneath a portion of the concrete pavement, visible through a cracked area in the pavement. Yard drains were not fitted with secondary containment, but the spill kit contained drain covers and booms for deployment in the event of a release. No evidence of a release was observed in the sheds or the surrounding service yard.

A second lower-level service yard was located south-adjacent to Section 15A, and was connected to the exterior yard by a passageway. This additional service yard contained a concrete pad with an access port at the location of a closed-in-place 1,080-gallon diesel UST for an emergency generator. This UST was registered with the New York State Department of Environmental Conservation (NYSDEC) as closed in-place, which was confirmed by Museum representatives. No closure documents or further evidence regarding the UST were obtained during the preparation of this report. However, the Senior Director of Human Resources and Environmental, Health and Safety confirmed that the tank was a double-wall tank with interstitial and high-level alarm monitoring installed in 1989, and was closed in place in 2010 by filling with concrete. An associated 50-gallon day tank historically supplied by the UST was formerly located in a generator room in Section 1. The 50-gallon AST was registered with NYSDEC as being in-service, but was emptied and removed in September 2016.

Theodore Roosevelt Park

Outdoor portions of the Phase I Site included landscaped areas and stone tile-paved sidewalks, which comprised portions of the approximately 200,000-SF portion of Theodore Roosevelt Park. The Project includes an approximately 1,500 SF work area north of Section 18, as shown on Figure 2, to relocate the New York Times Capsule sculpture from its current location (south-adjacent to Section 16) to the outdoor area north-adjacent to Section 18. The proposed plan for the sculpture relocation comprises extending the terrace on the east side of the entrance pathway to Section 18 to create a level platform for sculpture. Some minimal landscaping would be involved during the relocation of the sculpture.

All paving and landscaping in the portions of Theodore Roosevelt Park within the Phase I Site boundary were observed to be in good condition, with no odors, staining, or stressed vegetation noted.

Chemical waste was disposed of by Clean Harbors, a permitted chemical waste hauler. Universal waste was stored in the northern portion of the exterior yard, and was disposed of by Action Carting, a private hauler.

2.2 Topography and Hydrogeology

The surface topography slopes slightly down to the south-southwest towards the Hudson River. Based on the U.S. Geological Survey (USGS) Central Park Quadrangle map, the Phase I Site is approximately 85 to 90 feet above the North American Vertical Datum (NAVD) of 1988, an approximation of mean sea level. Based on USGS mapping, depth to bedrock in the vicinity of the Phase I Site is anticipated to be highly variable (approximately 5 to 35 feet below grade). The Final Environmental Impact Statement (FEIS) for the Planetarium and Northside Project, prepared by AKRF in September 1996 stated that a subsurface investigation was conducted in the northern and western portions of Theodore Roosevelt Park to determine whether hazardous materials at the Museum could pose a problem for proposed construction activities.

The investigation identified no significant evidence of subsurface contamination. The investigation results identified the presence of fill material throughout the investigation area;

however, the depth of the fill layer was not specified. Similarly, fill materials may be present beneath the Phase I Site.

The 1996 FEIS also stated that groundwater was encountered between approximately 20 to 30 feet below grade; however, shallower groundwater perched on bedrock may be present. Groundwater is anticipated to flow in a southwesterly direction toward the Hudson River (approximately 3,200 feet west of the Phase I Site). Actual water table depth and groundwater flow direction can be affected by many factors including the A/B/C/D Line subway tunnels approximately 450 feet east of the Phase I Site (east-adjacent to the Phase I Site superblock beneath Central Park West), other subsurface features or obstructions such as basements or utilities, and other factors beyond the scope of this assessment. Groundwater in Manhattan is not used as a source of potable water.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

A concrete pad associated with one 1,080-gallon diesel UST was located on-site in a service yard south-adjacent to Section 15A. According to the Senior Director of Human Resources and Environmental, Health and Safety, the tank was a double-wall tank with interstitial and high-level alarm monitoring installed in 1989, and was emptied, and closed in place by filling with concrete in 2010. The UST was registered with the NYSDEC under PBS Facility ID 2-611190. NYSDEC records indicated that the 1,080-gallon UST was installed in 1989 and closed in place in 2001. Museum staff indicated that the PBS listing will be updated to reflect the correct closure date of 2010.

A 1996 Final Environmental Impact Statement (FEIS) for Hayden Planetarium and North Side Project, summarized in Section 7.0, noted 1962 engineering plans that indicated the proposed installation of a 30,000-gallon UST in Section 15. However, no further documentation of the tank installation was found, and Museum representatives were unaware of the tank at the time of the Phase I Site inspection. The engineering plans were reported to correspond to the period when the Museum converted from coal to Con Ed steam as a heating source; thus, it is possible the proposed UST was not installed.

The portions of the Museum outside of the Phase I Site boundary were identified with one in-service 6,000-gallon diesel UST, Tank #1, used to fuel an emergency generator located in a service yard in the southwestern corner of the Museum. The fill port for this UST was located near the generator. No odors, staining, or spills were noted near the fill ports. The UST was registered with the NYSDEC under PBS Facility ID 2-611190. NYSDEC records indicated that the 6,000-gallon UST was installed in 2005. According to the Senior Director of Human Resources and Environmental, Health and Safety, the 6,000-gallon UST was double-walled fiberglass reinforced plastic construction, equipped with an overfill alarm, connected to the BMS, and has no records of related historic releases.

The Museum provided a Notice of Violation dated May 2, 2013, from the NYSDEC indicating that an inspection of the 6,000-gallon diesel UST (Tank #1) revealed evidence of product in the tank (top) sump. NYSDEC recommended that the discharge within the sump be cleaned up to its satisfaction and measures be taken to eliminate this concern in the future. In an email dated May 24, 2013, the Senior Director of Human Resources and Environmental, Health and Safety stated that the spill was cleaned up and disposed of through the Museum's private waste hauler. Piping was cleaned and repaired to prevent

future leaks, and then confirmed that there was a proper seal. NYSDEC approved the clean-up and repair measures, and subsequently closed the violation.

Other off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

One in-service 1,080-gallon diesel AST, Tank #3, was noted in Section 16, adjacent to the parking garage space. A 500-gallon diesel AST, located in Section 17, was used as a day tank for the 1,080-gallon diesel AST in Section 16. The AST and day tank were used to fuel an emergency generator.

A former 50-gallon diesel AST (day tank) historically supplied by the on-site 1,080-gallon diesel UST was located on-site in a generator room in the lower level of Section 1. According to the Senior Director of Human Resources and Environmental, Health and Safety, the 50-gallon diesel AST was emptied and removed in September 2016.

An empty 250-gallon AST formerly containing TCE was also noted in Section 17, which was historically used as a parts washer.

One 3,000-gallon liquid nitrogen AST was noted in the exterior yard, protected by bollards.

Portions of the Museum located south-adjacent to the Phase I Site were identified with one additional in-service 200-gallon diesel AST in the regulatory database. According to the Senior Director of Human Resources and Environmental, Health and Safety, the 200-gallon AST is connected to the 6,000-gallon UST identified in the Museum, outside of the Phase I Site boundary. The 200-gallon AST is double-walled, with a product level gauge connected to the BMS. According to the Senior Director of Human Resources and Environmental, Health and Safety, there is no record of historic releases related to this AST. Other off-site ASTs are discussed in Section 5.2.2.

The ASTs were registered with the NYSDEC under PBS Facility ID 2-611190. NYSDEC records indicated that the on-site 1,080-gallon diesel AST was installed in 2004, the associated 500-gallon diesel AST day tank was installed in 1997, the on-site 50-gallon AST was installed in 1988, and the off-site 200-gallon diesel AST was installed in 2005. All ASTs were registered as being in service. According to the Senior Director of Human Resources and Environmental, Health and Safety, the PBS registration will be updated to list the on-site 1,080-gallon UST and associated 50-gallon AST as closed in place in 2010 and closed-removed in 2016, respectively.

As required by the applicable US Environmental protection Agency (EPA) regulatory thresholds, an Oil Spill Prevention Control and Countermeasure Plan (Oil SPCC Plan) was adopted. The goal of the Oil SPCC Plan is to implement containment measures to prevent oil spills into navigable waters. Additionally, the plan outlines inspection, testing, and preventative maintenance procedures, employee training for those involved with the use, storage, or management of oil, and spill response procedures.

2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the Museum buildings, window caulking, electrical equipment, and/or fluorescent lighting fixtures, light bulbs and switches may contain PCBs and/or mercury. Two hydraulic elevators were located in Section 15 and may contain PCBs. No hydraulic oil storage or staining was noted in the elevator mechanical rooms or in any on-site spaces inspected during the reconnaissance.

2.5 Lead-Based Paint

After 1977, the use of lead-based paint inside commercial structures was restricted and its use elsewhere became less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Painted surfaces were observed to be generally in good condition in the viewed accessible areas with the exception of surfaces within the former shooting range and some stairway walls within Section 1.

Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction).

2.6 Utilities

Con Ed provides natural gas, steam, and electricity to the Phase I Site and surrounding area. The Phase I Site is connected to the municipal water and sewer systems.

2.7 Waste Management and Chemical Handling

Universal and commercial trash generated by the Museum was stored in approximately 30-cubic yard trash containers located in the exterior yard, pending disposal by Action Carting, a private hauler. The commercial trash storage area appeared to be in good condition. Floor drains were noted throughout the service yard, including the chemical storage shed area in the yard's northeastern corner. Though the drains were reported to be connected to the municipal sewer system, the drains were in good condition with no evidence of releases or spills. In addition, chemical storage sheds are maintained with secondary containment, and spill prevention kits were identified in the adjacent drum storage area.

Chemical storage at the Phase I site included:

Section 8 - Containers, 1 liter to 5 gallons in volume, of 1-butanol, ethyl alcohol, toluene, and other specimen preservation-related solvents;

Section 15 - Approximately 300,000 small jars (up to five gallons) of specimens preserved in ethanol or isopropanol, large containers and drums (up to 55 gallons) of ethanol used for specimen preservation, and small containers (generally 15 gallons or less) of rotenone (a piscicide stored on-site designated for off-site use only), organic solvents, and solvent wastes;

Section 16 – One 1,080-gallon diesel fuel oil AST with secondary containment;

Section 17 - One empty 250-gallon tank formerly containing TCE and small containers (up to 5 gallons) of formalin in a research space, small containers (up to one gallon) of polyester resins, spray paints, and acids in the exhibition production shop on the fifth floor, and a 500-gallon double-wall AST day tank (associated with the AST located in Section 16).

Exterior yard - Drums (up to 55 gallons) of ethanol, isopropanol, research space waste, food oil waste, and diesel in chemical storage sheds, and liquid nitrogen in a 3,000-gallon AST. Each

storage shed was equipped with a dedicated secondary containment system and a spill prevention kit was located in an adjacent area.

A Risk Management Plan (RMP) was established for the Museum, as required by NYC Local Law 92. Local Law 92 requires that facilities with certain hazardous substances or regulated toxic substances above federally determined levels prepare and submit a RMP to the NYCDEP. It was determined that the only such hazardous substance listed in the applicable NYCDEP regulations present on the Museum's property above its threshold planning quantity, was sulfuric acid, which was reported at a quantity of 22,050 pounds. According to the RMP, most sulfuric acid was contained in lead-acid batteries and generators; however, no single process or equipment contained over 1,000 pounds of sulfuric acid at a given time. The RMP outlined specific procedures in the event of a release of sulfuric acid, employee training, and the names and phone numbers of designated personnel to contact in the event of a spill.

The Museum provided an Air Facility Registration Certificate issued by the NYSDEC, which permits the Museum to operate under a minor facility registration for the use of a batch vapor TCE degreaser and a spray painting booth located in Section 17. Both sources of air emissions were not identified in 6 New York Codes, Rules, and Regulations (NYCRR) Part 201-3 as being exempt or trivial activities. This certificate was issued in February 2009 and did not have an expiration date.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database dated January 2016, the average level of radon found in Manhattan is 2.1 picocuries/liter in basements and 2.79 picocuries/liter on first floors, below the USEPA recommended action level of 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (e.g., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Suspect ACM observed during the reconnaissance included: window glazing and caulking, drywall, plaster, vinyl floor tiles and associated mastic, ceramic tile mastic, suspended ceiling tiles, ventilation duct and thermal pipe insulation, and spray-on fireproofing, generally in good condition in the viewed accessible areas with the exception of surfaces within the former shooting range and some stairway walls within Section 1. ACM may be present in other locations within the Phase I Site boundary which were not accessible during the reconnaissance, such as inside walls and above ceilings. The Senior Director of Human Resources and Environmental, Health and Safety stated that the Phase I Site buildings have been surveyed for asbestos, and that asbestos was abated during previous construction activities. Additionally, an Asbestos Management Plan was in place to outline procedures for managing ACM during renovations, improvements, and general maintenance conducted at the Museum. This reconnaissance is for a Phase I assessment and as such does not constitute or substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine whether the project will disturb ACM. Any such ACM (and any other ACM subsequently identified) must be removed prior to renovation or demolition.

4.0 ADJACENT LAND USE

The Phase I Site was bounded to the north by West 81st Street, followed by multi-story residential buildings; to the east by the off-site portion of the Museum; to the south by West 77th Street, followed by multi-story residential buildings and the New York Historical Society; and to the west by Columbus Avenue, followed by mixed-use buildings. The surrounding blocks were occupied primarily by commercial, residential, and institutional uses, including schools and religious facilities. Central Park was located east-adjacent to the Phase I Site superblock. The A/B/C/D Line subway tunnel was located approximately 450 feet east of the Phase I Site beneath Central Park West.

5.0 PHASE I SITE HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use maps

Historical maps and documents were reviewed for indications of uses (or other evidence) suggesting hazardous material generation, usage or disposal on or near the Phase I Site. Specifically, Sanborn Fire Insurance Maps from 1902, 1912, 1951, 1976, 1989, and 2007, included as Appendix B, were reviewed.

1902

A majority of the Phase I Site was shown as vacant land with an outline labeled “projected buildings” (presumably related to proposed Museum expansions). An unidentified building was shown in the southeastern portion of the Phase I Site, currently identified by the Museum as Section 1.

The Phase I Site block comprised off-site portions of the Museum. A lecture hall, stage, and gallery were noted in the central portion of the Museum. The remainder of the block featured outlines of proposed buildings. The surrounding area was mixed-use, and developed predominantly with unlabeled three- to five-story buildings. The New York Geographical Society, Hamilton Institute, and Hotel Beresford were noted on the north-adjacent block. Central Park was noted east-adjacent to the Phase I Site block. Schools and religious institutions were also noted west of the Phase I Site. Hotel Endicott, a synagogue, and builder’s yard were noted northwest of the Phase I Site. A railroad station was noted northwest of the Phase I Site at the intersection of Columbus Avenue and West 81st Street.

1912

Two adjoined unidentifiable buildings were noted in the central portion of the Phase I Site, currently identified by the Museum as Sections 15 and 15A. Section 7A was shown as three stories. An unidentified building (currently identified by the Museum as Section 8) was shown in the southwestern portion of the Phase I

Site. The remainder of the Phase I Site consisted of parkland and walkways associated with Manhattan Square.

The surrounding area was primarily developed with small dwellings with some mixed-use buildings along Columbus Avenue. Hotel Colonial was noted on the north-adjacent block in place of a vacant lot. Manhattan Square Hotel replaced a vacant lot previously noted on the 1902 map, on the south-adjacent block. The New York Historical Society Museum and Library was also noted on the south-adjacent block, in place of vacant lots. Blocks southwest of the Phase I Site were primarily developed with dwellings and mixed-use buildings along Columbus Avenue. Upholstering facilities, Public School No. 87, and a building labeled “drugs” (presumably a pharmacy) were noted on the southwest-adjacent block. Two garages/repair shops with gasoline tanks were noted in the greater surrounding area, over 730 feet to the northwest.

1951

A Power & Service Building, currently referred to by the Museum as Section 17, was identified in the northern portion of the Phase I Site with a construction date of 1930. Sections 15 and 15A were identified as a storage and auto house, respectively. A passageway was shown connecting the Power & Service Building (Section 17) to the storage building (Section 15). A School Service building (currently identified by the Museum as Sections 11 and 11A) was noted to the southwest with a construction date of 1926, adjoined to Section 8 and Section 1 via aboveground passageways.

Several additions were noted to the off-site portion of the Museum, including: Hayden Planetarium and Whitney Memorial to the northeast; a building labeled African House and Roosevelt Memorial to the east; and Hall of Ocean Life to the southeast. In the greater surrounding area, multi-story dwellings and apartment buildings replaced several vacant lots and small dwellings. A laundry facility was noted approximately 150 feet north of the Phase I Site, on the north-adjacent block in place of a dwelling. The New York Historical Society Museum and Library expanded farther west. The railroad station previously noted northwest of the Phase I Site on the 1902 and 1912 maps was no longer indicated.

1976

The Phase I Site appeared similar to the 1951 map.

W.M.J. O’Shea Junior High School occupied a majority of the southwest-adjacent block, in place of several dwellings noted on the 1912 and 1951 maps. Public School No. 87, previously noted on the 1912 and 1951 maps, expanded to include an auditorium, gym, and playground in place of dwellings. No further significant changes were noted from the 1951 map.

1989

The Phase I Site appeared similar to the 1976 map.

Additional multi-story residential buildings were noted west and northwest of the Phase I Site, in place of hotels and religious facilities. No further significant changes were noted from the 1976 map.

2007

A roof patio with parking area was noted east-adjacent to the Power House (Section 17) and Service Building (currently identified by the Museum as Section 16). The auto house and storage building previously noted on the 1951 through 1989 maps were relabeled as Boiler House and Power House. The Phase I Site and Phase I Site superblock were identified as Theodore Roosevelt Park.

North, east, west, and northwest-adjacent maps for 2007 were not available for review. A subway station was indicated east-adjacent to the Phase I Site block. No further significant changes were noted from the 1989 map.

To summarize, the historical Sanborn maps indicated that the Phase I Site was Museum-leased since at least 1902 and consisted primarily of open space with the exception of Section 1, located in the southeastern portion of the Phase I Site. Various additions were identified between 1912 and 2000, with Section 16 identified most recently on the 2007 Sanborn map. Based on a site plan provided by the Museum's representatives, the Phase I Site buildings were constructed between 1877 and 2000.

Based on historical Sanborn maps, the off-site adjacent Museum buildings were built as early as 1902, with various additions constructed thereafter. The surrounding area was primarily residential in the early 20th century, with a laundry facility noted approximately 150 feet north of the Phase I Site on the north-adjacent block, and two garages/auto repair shops over 730 feet northwest of the Phase I Site. Additional commercial buildings were indicated in the late 20th and early 21st centuries, primarily along Columbus Avenue. Institutional uses, such as schools, religious facilities, and museums were also noted in the surrounding area.

5.1.2 Historical Aerial Photographs

Since historical fire insurance maps were available for the Phase I Site (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

5.1.3 Phase I Site Tax Files and Zoning Records

Based on information provided by Toxics Targeting, Inc. of Ithaca, New York, the Phase I Site is zoned as Parkland, and is listed with seven buildings classified as P7 (museums) built in 1998. However, historical Sanborn maps (Section 5.1.1) and documents provided by the Museum, indicated that the Museum was constructed starting in 1877.

5.1.4 Recorded Land Title Records

Land title records were searched using the ACRIS database, and are summarized in Section 5.2.3.

5.1.5 Local Street Directories

A City Directory prepared by Environmental Data Resources, Inc. was reviewed as part of this Phase I ESA. The City Directory consisted of the names of businesses located on-site and in adjacent Phase I Site, compiled from city and reverse telephone directories at approximately five-year intervals starting in 1920.

The following historical uses were identified for the Phase I Site: residences from 1950 to 2013; Altoy Corporation and Urban Vertical Parking, Inc. in 1983; Astro Waterproofing and Restoration Corporation in 1998; Active Automotive Customizing from 2006-2008; and Yitz Auto Repair, Rabbit Hill, Inc., and the American Museum of Natural History in 2013. Based on historical documents, the Phase I Site has been occupied by the Museum throughout its history and the non-Museum listings are likely to be erroneously attributed to the Phase I Site address.

No substantive off-site listings were noted in the City Directory search report.

5.2 Regulatory Review

The regulatory database listings, shown in Appendix C, were obtained from Toxics Targeting, Inc. of Ithaca, New York. It includes summaries of the databases searched, their radii around the Phase I Site and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

Databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF); and the USEPA Civil Enforcement Docket. Facilities subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) are discussed with State RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's list of sites that probably require remedial action under the Superfund Program. Nearby NPL sites can sometimes pose a risk of stigmatizing surrounding Phase I Site and thus impacting property values.

One NPL site was identified within a one-mile radius of the Phase I Site. The Hudson River PCB Sediments site, located approximately 3,200 feet west of the Phase I Site, is listed due to PCB-contaminated sediment. Based on its location relative to the Phase I Site and the presumed hydraulic gradient, this site is not likely to have impacted subsurface conditions at the Phase I Site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived concern).

One CERCLIS site was identified within a ½-mile radius of the Phase I Site. The Hudson River PCB Sediments site, located approximately 3,200 feet west of the Phase I Site, is listed due to PCB-contaminated sediment. Based on its location relative to the Phase I Site and the presumed hydraulic gradient, this site is not likely to have impacted subsurface conditions at the Phase I Site.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The Phase I Site is not listed as an ERNS site.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS sites were identified within a 1/8-mile radius of the Phase I Site.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a 1/8-mile radius of the Phase I Site.

United States Environmental Protection Agency Civil Enforcement Docket

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

No facilities were listed in the USEPA's Civil Enforcement Docket within a 1/8-mile radius of the Phase I Site.

Air Discharge Facilities Index (ADF)

This federal database includes information on certain air emission sources.

One Air Discharge Facility was identified within a 1/8-mile radius of the Phase I Site. The Beresford Apartments located at 211 Central Park West, approximately 590 feet northeast of the Phase I Site, was listed for potential discharges of nitrogen dioxide, and was reported to be in regulatory compliance.

Based on the nature of the listing, this facility is not likely to have affected subsurface conditions beneath the Phase I Site.

5.2.2 State

State databases included the listings of petroleum/hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP) Sites; and Historic Utility Sites.

New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

No spills were listed for the Phase I Site. Five hundred ninety (590) spills were reported within a 1/2-mile radius of the Phase I Site, including nine active-status spills and 581 closed-status spills. The nearest spill listings with some potential to affect the Phase I Site are summarized below:

- Spill No. 9512346 was reported in January 1996 at the New York Police Department (NYPD) 20th Precinct located at 120 West 82nd Street, approximately 300 feet northwest of the Phase I Site. According to the listing, contaminated soil was found during on-site excavation and product was encountered on water during a tank removal. The site was being remediated under a New York City Department of Design and Construction (NYCDDC) Consent Order. The spill listing indicated that a methyl tert-butyl ether (MTBE) plume was detected in groundwater and was being treated by bioremediation. Routine groundwater sampling was conducted during remediation through 2004. Sampling events reported in 2005 indicated that MTBE concentrations decreased and were below NYSDEC criteria for two consecutive sampling events. The spill was closed in June 2005 and received a status of No Further Action (NFA).
- In May 2001, Spill No. 0101318 was reported at the intersection of Columbus Avenue and West 78th Street, approximately 50 feet southwest of the Phase I Site. The listing indicated that approximately 50 gallons of diesel had leaked from a tank truck onto the street, and that the FDNY arrived to remove the diesel from the pavement. The Department of Sanitation then sanded and swept away the remaining oil, and the spill was closed. Based on these details, it is not likely that this incident affected the Phase I Site subsurface.
- In August 1999, Spill No. 9906118 was reported at 66 West 77th Street, approximately 140 feet southwest of the Phase I Site. The listing indicated that a faulty gauge led to a fuel tank being overfilled, and oil spilled onto the sidewalk. Approximately 10 gallons of No. 2 fuel oil was released. The spill was cleaned, all contaminated material was recovered, and the listing was closed. Based on these details, it is not likely that this incident affected the Phase I Site subsurface.
- In July 2005, Spill No. 0505106 was reported at Consolidated Edison Vault No. 7264 located at the intersection of Columbus Avenue and West 79th Street, approximately 50 feet west of the Phase I Site. The listing indicated that approximately 2 gallons of dielectric fluid leaked from a transformer onto the concrete floor and into the sump pit, and that no sewer or waterway was affected. The spill was contained and cleanup was pending the energization of equipment, but the spill was closed. Based on these details, it is not likely that this incident affected the Phase I Site subsurface.
- In July 2009, Spill No. 0904587 was reported at the intersection of Columbus Avenue and West 79th Street, approximately 50 feet west of the Phase I Site. The listing indicated that 10 gallons of antifreeze was spilled onto the road, cleaned by the Department of Sanitation, and the spill was closed. Based on these details, it is not likely that this incident affected the Phase I Site subsurface.

Based on the listing details, distance and/or anticipated groundwater flow direction, none of the reported spill listings are likely to have significantly affected subsurface conditions at the Phase I Site. Details from all listed spills are included in Appendix C.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites which have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

No TSD facilities were identified within a ½-mile radius of the Phase I Site. No CORRACTS facilities were identified within a one-mile radius of the Phase I Site.

The Phase I Site was listed as a RCRA generator. One-hundred thirty (130) RCRA generators/transporters were reported within a ⅛-mile radius of the Phase I Site.

- The Museum was identified as a small quantity generator (SQG) of hazardous waste from 2005 to 2016, and historical large quantity generator (LQG) of hazardous waste from 1984 to 2005 for various waste related to Museum operations (EPA ID NYD061202768). The Museum was also identified as an unspecified generator of ignitable solid waste in 1984 under EPA ID NYP000782847. One general-generators violation was reported in 1997 with a compliance date of 1998.

Facilities with some potential to affect subsurface conditions beneath the Phase I Site, based on proximity and/or the nature of the listings, are as follows:

- Adlers Cleaners, which is located at 445 Columbus Avenue, approximately 130 feet north-northeast of the Phase I Site, was identified as a generator of spent halogenated solvents in 1986 and 1998.
- Jefan Cleaning Service, located at 445 Columbus Avenue, approximately 130 feet north-northeast of the Phase I Site, was identified as a generator of spent halogenated solvents in 1986.
- The Consolidated Edison Service Box No. 14410 at the intersection of West 81st Street and Columbus Avenue, approximately 75 feet north-northeast of the Phase I Site, was identified as a generator of lead waste in 2013.
- A Consolidated Edison site at the intersection of West 80th Street and Columbus Avenue, approximately 50 feet north of the Phase I Site, was identified as a Conditionally Exempt Small Quantity Generator (CESQG) of lead in 2009. A Consolidated Edison vault was also identified at the intersection of West 80th Street and Columbus Avenue as a generator of lead in 2015.
- The Consolidated Edison Service Box No. 51927 at the intersection of West 79th Street and Columbus Avenue, approximately 50 feet west of the Phase I Site, was identified as a generator of lead waste in 2013 and 2014.
- The Consolidated Edison Manhole No. 51925 at the intersection of West 79th Street and Columbus Avenue, approximately 50 feet west of the Phase I Site, was identified as a generator of lead waste in 2013 and 2014.

Based on distance, anticipated groundwater flow direction, and/or nature of the listing, the remaining listings are not likely to affect subsurface conditions beneath the Phase I Site.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

No CBS facilities are listed within a ⅛-mile radius of the Phase I Site.

Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No SWF facilities were located within ½ mile of the Phase I Site.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

The Phase I Site was listed in the PBS database under Facility ID 2-611190. Seventy-one PBS and FDNY facilities were identified within a ¼-mile radius of the Phase I Site, including one facility located in an off-site portion of the Museum. Details of the nearest facilities are listed in Table 1.

Table 1
Area Petroleum Bulk Storage Facility Data

| Location | Capacity (gallons) | Product Stored | Status | Distance/Direction from Phase I Site |
|---|---|----------------|--|--------------------------------------|
| American Museum of Natural History 179 Central Park West (per FDNY listing) 200 Central Park West | 1,080 UST 1,080 AST 500 AST (day tank) 50 AST(dry) | Diesel | Closed-In Place (1,080-gallon UST) In Service In Service In Service | At Phase I Site |
| American Museum of Natural History 179 Central Park West (per FDNY listing) 200 Central Park West | 6,000 UST 200 AST | Diesel | In Service | Outside of Phase I Site boundary |
| The Orleans 100 West 80 th Street | 4,800 AST | No. 2 Fuel Oil | In Service | 130 feet north-northwest |
| Parc 77 50-52 West 77 th Street | 10,000 AST | No. 6 Fuel Oil | In Service | 130 feet south-southwest |
| 64-66 West 77 th Street 66 West 77 th Street | 4,000 AST | No. 2 Fuel Oil | In Service | 140 feet southwest |
| 101 West 80 th Street Owners Corporation 101 West 80 th Street | 3,000 AST | No. 4 Fuel Oil | In Service | 145 feet north-northwest |
| Joben Realty Association 101 West 78 th Street | 5,000 AST | No. 4 Fuel Oil | In Service | 150 feet west-southwest |
| 102 West Associates 102 West 79 th Street | 2,000 UST | No. 2 Fuel Oil | Closed-In Place | 150 feet west |
| 370 Columbus Realty LLC 370 Columbus Avenue | 3,000 AST | No. 6 Fuel Oil | In Service | 150 feet west-southwest |
| The Park Belvedere Condominium 101 West 79 th Street | 20,000 UST | No. 6 Fuel Oil | In Service | 160 feet northwest |

Table 1
Area Petroleum Bulk Storage Facility Data

| Location | Capacity (gallons) | Product Stored | Status | Distance/Direction from Phase I Site |
|---|--------------------|----------------|------------|--------------------------------------|
| The Excelsior Hotel 45 West 81 st Street | 6,000 UST | No. 6 Fuel Oil | In Service | 160 feet northeast |
| 51 West 81 st Corporation 51 West 81 st Street | 5,000 AST | No. 2 Fuel Oil | In Service | 165 feet north-northeast |
| Park 44 Corporation 44 West 77 th Street | 7,500 UST | No. 6 Fuel Oil | In Service | 170 feet south-southwest |
| The Museum 77 Condominium 105 West 77 th Street | 1,500 AST | No. 2 Fuel Oil | In Service | 185 feet southwest |

Notes: AST - aboveground storage tank
UST - underground storage tank

The State SPILLS database reported closed-status spills at 66 West 77th Street, 101 West 78th Street, and 45 West 81st Street. However, based on the information provided, anticipated groundwater flow, and their distance, these spills are not likely to have affected the Phase I Site subsurface. Details of all PBS facilities located within 1/8-mile of the Phase I Site are included in Appendix C.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

No inactive hazardous waste disposal sites were located within a 1-mile radius of the Phase I Site.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDSs were identified within a 1/2-mile radius of the Phase I Site.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a 1/8-mile radius of the Phase I Site.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a 1/2-mile radius of the Phase I Site.

Voluntary Cleanup Program

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known

contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No VCP sites were identified within a ½-mile radius of the Phase I Site.

Brownfield Cleanup Program

This NYSDEC program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

One BCP site was identified within a ½-mile radius of the Phase I Site. The facility, identified as 267-273 West 87th Street is located approximately 2,400 feet north of the Phase I Site and was a former cab company. Contamination at the site included elevated levels of petroleum- and chlorinated-related volatile organic compounds (VOCs) and heavy metals in soil and groundwater. Soil vapor samples indicated elevated levels of VOCs, including TCE and tetrachloroethylene (PCE). Based on its location relative to the Phase I Site and the presumed hydraulic gradient, this site is not likely to have impacted subsurface conditions at the Phase I Site.

Historic Utility Sites

This is an inventory of certain power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports from 1898 to 1950.

No historical utility sites were reported within a ⅛-mile of the Phase I Site.

5.2.3 Local Agency File Review

Records available online from the New York City Fire, Buildings and Finance Departments were viewed for the Phase I Site. The Fire Department records were obtained by Toxics Targeting, Inc. as part of the regulatory database search. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of pertinent information are included in Appendices C (Fire Department Records) and D (Buildings and Finance Department Records).

Fire Department

The computerized FDNY Tanks database was searched regarding past or current motor vehicle fuel and heating oil tank listings within a ⅛-mile radius of the Phase I Site.

Ten listings were identified in computerized FDNY tank records within a ⅛-mile radius of the Phase I Site. One listing with no tank data was identified for the Phase I Site. This listing and off-site listings are discussed with PBS listings in Section 5.2.2.

Buildings Department

Buildings Department records were generally consistent with the historical information detailed in the Sanborn maps, reviewed in Section 5.1.1. Computerized records indicated that numerous Certificates of Occupancy for the Phase I Site and off-site Museum buildings, dating from 1925 to 2009, reported that the buildings were used as a museum, and contained offices, mechanical rooms, laboratories, parking garages, storage areas, retail, and exhibit areas.

Department of City Planning

A search of NYC Environmental Quality Review Requirements (CEQR) data by Toxics Targeting, Inc. indicated that neither the Phase I Site nor any sites within a 1/8-mile radius of the Phase I Site were assigned (E) designations.

Land Title Records and Tax Records

Electronic Phase I Site transaction records for the Phase I Site Block and Lot were reviewed from the New York City Department of Finance Office of the City Register Automated City Register Information System (ACRIS). No deed information was identified in the ACRIS files for the Phase I Site.

5.2.3.1. Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Phase I Site or any adjoining Phase I Site would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

A Freedom of Information Law (FOIL) request for information pertaining to the Phase I Site was submitted to the NYCDEP via the online request form dated August 5, 2016. As of the date of this Phase I ESA, a response has not been received from NYCDEP. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

A FOIL request for information pertaining to the Phase I Site was submitted to NYSDEC via the online request form dated August 5, 2016. In a response dated August 30, 2016, NYSDEC provided the following documents pertaining to the Museum: a PBS Facility Information Report and PBS applications identifying one 6,000-gallon in-service diesel UST, one 1,080-gallon in-service diesel AST, one 500-gallon in-service diesel AST, one 200-gallon diesel AST, one 50-gallon in-service diesel AST, and one 1,080-gallon

closed-in-place diesel UST; a 2009 PBS application for one in-service 6,000-gallon diesel UST; a May 2013 Notice of Violation from NYSDEC indicating that an inspection of the 6,000-gallon diesel UST revealed evidence of product in the tank top sump; and a subsequent NYSDEC PBS inspection form dated May 5, 2016 which did not identify any facility or tank violations, indicating that all previous issues had been resolved.

A FOIL request for information pertaining to the Phase I Site was submitted to the New York City Department of Health (NYCDOH) via the FOIL request form dated August 5, 2016. As of the date of this Phase I ESA, a response has not been received from NYCDOH. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

A FOIL request for information pertaining to the Phase I Site was submitted to the New York State Department of Health (NYSDOH) in a letter dated August 5, 2016. In a letter dated September 6, 2016, NYSDOH indicated that no records pertaining to the request were located.

In AKRF's judgment, no other additional local records meeting the ASTM criteria are pertinent for the Phase I Site.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the American Museum of Natural History provide any pertinent information regarding the Phase I Site, specifically:

- Whether any *environmental liens or activity and land use limitations (AULs)* are in place or filed or recorded against the Phase I Site?
- Whether they had any specialized knowledge or experience related to the Phase I Site or nearby Phase I Site (e.g., specialized knowledge of any chemicals used on-site)?
- Whether the (anticipated) purchase price reflects that the Phase I Site is or could be contaminated?
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Phase I Site?
- Whether they were aware of any obvious indicators of contamination at the Phase I Site?
- Whether they were aware of any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products?

According to the Museum, this Phase I ESA was performed to evaluate the Phase I Site as part of environmental review associated with the Project.

The Museum's Senior Director of Human Resources and Environmental, Health and Safety and Senior Director of the Museum's Capital Projects and Construction department, reported no knowledge of any: environmental liens or activity use limitations on the Phase I Site; property value reduction due to environmental issues; any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products; or any obvious indicators of contamination on the Phase I Site. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

American Museum of Natural History Planetarium and North Side Project – Final Environmental Impact Statement, Allee King Rosen & Fleming, Inc. (AKRF), September 1996

AKRF prepared a Final Environmental Impact Statement (FEIS) in 1996 to analyze the effects of the proposed Planetarium and North Side Project in conjunction with the Museum. The proposed project consisted of new facilities for exhibition, scientific research, education, and visitor services on the north side of the Museum and planetarium. The FEIS analyzed the proposed project for potential impacts it may have on the surrounding area. An assessment of hazardous materials was conducted in the Museum activities, buildings, and soil and groundwater on the Phase I Site. The FEIS indicated that the Museum's Power House (Section 15) housed a coal-fired power plant at one time, and potential contaminants could pose a hazard if they remained in the site subsurface.

Based on historical documentation and interviews with Museum staff, a coal-fired electric power plant was located in Section 15 from approximately 1931 up until the 1960s, when the Museum was converted to alternating current. During the 1996 inspection, former ash basins in the sub-basement of Section 15 were observed to be covered with ash residue in addition to a pile of ash.

A 1,000-gallon underground diesel fuel storage tank was observed at the time of the site inspection on the Museum Phase I Site, and was reported to be used to fuel the emergency generator. The FEIS noted that engineering plans from 1962 indicated the proposed installation of a 30,000-gallon UST in Section 15; however, no further documentation of the tank installation was found, and Museum representatives were unaware of the tank at the time of the inspection. The engineering plans were reported to correspond to the period when the Museum converted from coal to Con Ed steam as a heating source; thus, it is possible the proposed UST was not installed.

Chemical storage including spray paint, muriatic acid, hydrochloric acid, and lacquer thinner were noted in Section 17. Additionally, silk screening operations, a spray painting booth, and a silver soldering booth were identified in Section 17, all equipped with exhaust hoods. The exhaust hoods were reported to be registered with the NYCDEP Bureau of Air Resources. Section 15 contained the Museum Reproduction Department, and storage and office space. Chemical storage consisted of various types of resin neatly stored with no apparent leaks, in a room registered with the New York City Fire Department. Evidence of small spills was noted around diesel storage on the ground floor.

Consolidated Edison owned three vaulted transformers east-adjacent to Section 15. The FEIS identified a letter from Consolidated Edison dated October 31, 1985 which stated that all three transformers had dielectric fluid PCB content of less than 50 parts per million, and are within the Federal regulations for the use of PCBs. Several dry-type transformers were noted throughout the remainder of the Museum that did not contain PCBs.

GCI Environmental Advisory, Inc. conducted a lead-based paint and asbestos investigation of the Museum in 1995. Suspect asbestos-containing material was observed in the basement of Section 17 and in off-site adjacent Museum buildings. Plans were reported to be made to abate damaged asbestos throughout the Museum. Lead-based paint was identified on the original painted ceilings in the Section 15 building and passageway connecting Section 15 to the Section 17.

A subsurface investigation was conducted in March and April of 1996 in the northern and western portions of the Phase I Site and Museum, to determine whether any chemical storage, tanks, or past and present uses affected the proposed area of construction. Based on soil borings, similar fill material was encountered throughout the investigated area. There was no evidence of ash or any potentially hazardous materials. Groundwater was encountered between 20 and 30 feet below ground surface.

American Museum of Natural History Richard Gilder Center for Science, Education, and Innovation – Historic Preservation Background Research Report, Higgins Quasebarth & Partners (HQ), September 2016

The September 2016 Historic Preservation Background Research Report, prepared by HQ, provided additional historical information regarding the Museum and Phase I Site and considered the appropriateness of the Project with regard to the Museum’s historic Master Plan and missions statement, and to the intended future plans for the Museum.

The report identified that the Museum was first constructed between 1874 and 1877, with the addition of Sections 2 through 7 between 1890 and 1900. Sections 15 and 15A were constructed between 1903 and 1904 and used as the Power House and Boiler Room buildings. Section 17 was constructed between 1930 and 1931 and used as the Power and Service Building, replacing the Section 15 Power House. Section 15 was converted to a garage by approximately 1933, and then into the current Ichthyology Department building in approximately 1965.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following exceptions. AKRF does not believe that the following limitations and data gaps are significant or materially affect the conclusions of this report.

- Results of this investigation are valid as of the dates on which the investigations were performed.
- Sufficient information about the history of the Phase I Site and surrounding area was obtained from the available historical Sanborn maps, New York City Buildings Department records, and interviews. Although the Phase I Site area history was not conducted in five-year intervals, this data gap is not likely to alter the conclusions of this report.
- Agency File Reviews for the Phase I Site and adjacent sites consisted of: a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2); and FOIL requests for pertinent records submitted to the FDNY, NYCDOH, NYSDOH, and NYSDEC. AKRF believes this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Phase I Site and additional reviews beyond this are not warranted and would not materially change the conclusions of this report.
- Interviews and user provided information are provided in Sections 2.0 and 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (e.g., local government officials such as NYSDEC personnel, beyond the FOIL requests discussed above), AKRF does not believe that this represents a significant data gap that would materially change the conclusions of this report.

9.0 CONCLUSIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term “Recognized Environmental Condition” or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Phase I Site: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Historically, the Phase I Site was Museum-leased since approximately 1874. Historic Sanborn maps indicate that in 1902 the Phase I Site was primarily vacant with the exception of Section 1 located in the southeastern portion of the Phase I Site. Various additions were identified between 1912 and 2000, with Section 16 identified most recently on the 2007 Sanborn map. Throughout their history, the Phase I Site buildings were primarily used for exhibitions, research, maintenance, and educational purposes associated with the Museum. Sections 15 and 15A were identified as a storage structure and auto house on Sanborn maps dated 1951 through 1989. Though Sanborn maps indicate that Sections 15 and 15A were then used as a Power House and Boiler House through 1989, prior reports indicate that Sections 15 and 15A were converted to a garage in approximately 1933, and into the current Ichthyology Department space in approximately 1965. Section 17 historically housed a coal-fired electric power plant until the 1960s, when the Museum converted to alternating current.

Throughout its history, the Phase I Site was bounded to the north by West 81st Street, followed by residential areas; to the east by portions of the Museum outside of the Phase I Site boundary; to the south by West 77th Street, followed by residential and institutional uses; and to the west by Columbus Avenue, followed by multi-story residential and commercial buildings. Central Park and other portions of the Museum and Theodore Roosevelt Park were located east of the Phase I Site.

As part of the environmental review process for the proposed project, this Phase I ESA report and a Subsurface Investigation (Phase II) Work Plan would be submitted to the New York City Department of Environmental Protection (DEP) for review and approval to evaluate any RECs identified as part of this assessment, as described below:

Recognized Environmental Conditions (RECs)

- Historic chemical storage and use at the Phase I Site that might represent RECs included:

Section 16 – One 1,080-gallon diesel fuel oil AST located within an epoxy-coated room with secondary containment berm;

Section 17 - One empty 250-gallon parts washer tank formerly containing trichloroethylene (TCE), and a 500-gallon double-wall AST day tank located on the first floor (associated with the AST located in Section 16); and

Exterior yard - Drums (up to 55 gallons) of ethanol, isopropanol, research space waste, and diesel in chemical storage sheds. Chemical storage sheds included secondary containment systems, and are regularly inspected to prevent spillage. Floor drains noted in the exterior yard and other areas throughout the Phase I Site were reported to be connected to the municipal sewer system but were in good condition with no evidence of releases or spills. Spill prevention kits were also identified in the drum storage area.

Regulatory databases identified the Museum as a small quantity generator (SQG) of hazardous waste from 2005 to 2016, and historical large quantity generator (LQG) of hazardous waste from 1984 to 2005. Chemical waste was disposed of by Clean Harbors, a permitted chemical waste hauler.

Although chemical storage areas are FDNY-permitted, with no evidence of a release noted on or concerning the Phase I Site, the locations of historical on-site use of chemicals (including chlorinated solvents) for specimen preservation and diesel fuel for Phase I Site operations and maintenance will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

- The Museum is registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database with four ASTs and two USTs, with three ASTs and one UST located at the Phase I Site.

Although on-site storage tank controls, including secondary containment in the form of curbs or double-wall construction, interstitial alarms, high level alarms and BMS management were noted with no evidence of a release noted on or concerning the Phase I Site, the locations of historical on-site storage of fuel oil in USTs and ASTs will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

- The historical uses of Section 17 (the Power House) included use as a coal-fired electric power plant and of Section 15 included use as an auto house and power house. During the reconnaissance, no evidence of coal storage or residue was observed and there is, therefore, no present information indicating that the Project is expected to be complicated by the former presence of the power house and auto house uses. These areas will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

De Minimis Conditions

- Arsenic-preserved hide storage was noted in dedicated areas on the fifth floor of Section 1, and on the third floor of Section 7A. Arsenic-preservation was a common preservation technique for natural history collections used between approximately 1930 and 1990. Preserved hides were stored in designated cabinets.
- The chemical storage area in Section 8 was noted on the fifth floor in an FDNY-permitted room with a secondary containment berm. Chemicals stored included 1 liter to 5 gallons in volume, of 1-butanol, ethyl alcohol, toluene, and other specimen preservation-related solvents, with no record of historic release.
- Chemical storage was noted in Section 11B on the lower level and fourth floors and included nitrate film negatives and acetate film roll storage.
- Chemical storage noted in Section 15 in the Ichthyology collections included approximately 300,000 small jars (up to five gallons) of specimens preserved in ethanol or isopropanol, large containers and drums (up to 55 gallons) of ethanol used for specimen preservation, and other containers (generally 15 gallons or less) of organic solvents, and solvent wastes.
- Additional chemical storage noted in Section 17 included small containers (up to one gallon) of polyester resins, spray paints, and acids in the exhibition production shop on the fifth floor.
- Additional chemical storage noted in the exterior yard included 55-gallon drums of food oil waste, and liquid nitrogen in a 3,000-gallon AST.

- A proposed 30,000-gallon UST was shown on 1962 engineering plans for Section 17 (the Power House). However, no documentation of the UST installation was found. Museum representatives do not believe the tank was installed, and the Museum was reported to have converted from coal to Consolidated Edison steam as a heating source around the time the plans were prepared; thus, it appears the proposed UST was never installed.
- One closed-in-place 1,080-gallon double-wall UST with interstitial monitoring and high-level alarm was identified in the Exterior Yard. This UST was associated with the former 50-gallon day tank AST identified in Section 1.
- The following petroleum storage tanks were located in Museum areas outside of the Phase I Site boundary: one in-service 6,000-gallon double-wall fiberglass reinforced plastic UST containing and one in-service 200-gallon double-wall AST, both containing diesel fuel and supplying an emergency generator. These tanks were located in a courtyard in the southwestern portion of the Museum, outside of the Phase I Site boundary. No odors, staining, or spills were noted in the vicinity of the AST and no related historic spills were documented.
- Based on the age of the Museum sections and prior subsurface investigations which identified historic fill in the northern portion of Theodore Roosevelt Park, historic fill materials may also be present beneath the Phase I Site.

Other Considerations (outside scope of ASTM Standard E1527-13)

The following items were identified as part of the Phase I ESA and are considered outside of the ASTM Standard E-1527-13. Provided that the Museum continues to manage these items in accordance with applicable regulatory requirements, the following are not considered significant concerns.

- Based on the age of the Museum sections, asbestos-containing materials (ACM) may be present. Suspect ACM observed during the reconnaissance included: window glazing and caulking, drywall, plaster, vinyl floor tiles and associated mastic, ceramic tile mastic, suspended ceiling tiles, ventilation duct and thermal pipe insulation, and spray-on fireproofing, generally noted to be in good condition with the exception of surfaces within the former shooting range and some stairway walls within Section 1. Museum representatives stated that the Phase I Site buildings had been surveyed for asbestos and an asbestos management plan was in place. Various abatement activities have been conducted as part of renovations and expansions, and reassessments are conducted prior to any construction activities.
- Based on the age of the Museum sections, lead-based paint may be present in any areas which were not recently renovated. Painted surfaces were generally noted to be in good condition with the exception of surfaces within the below-grade former shooting range and some stairway walls within Section 1.
- Based on the age of the Museum sections, any window caulking, electrical equipment, hydraulic equipment, or fluorescent lighting fixtures installed prior to 1979 may contain PCBs. Any fluorescent bulbs and switches may also contain mercury. No obvious leaks or odors were observed in connection with observed equipment or lighting fixtures in viewed accessible areas.

Potential for Vapor Migration

Due to the use and storage of chemicals on the Phase I Site, a potential for subsurface vapor intrusion may exist. Following any future subsurface testing, potential vapor mitigation of existing or future buildings would be assessed.

Conclusions

Although chemical storage areas are maintained as required, the Museum employs protective measures against releases, and there has been no evidence of a release noted on or concerning the Phase I Site, the locations of historical on-site storage of chemicals and fuel oil, as well as the location of the historical use of Section 17 (the Power House) as a coal-fired electric power plant and Section 15 as an auto house and power house, will be the subject of future Phase II subsurface investigation to evaluate whether there have been any impacts to subsurface conditions at the Phase I Site.

Prior to commencing development activities involving significant subsurface disturbance, a Phase II subsurface investigation, including soil, groundwater and soil vapor sampling and an inspection of the drain in the chemical storage yard, would be conducted to assess subsurface conditions at the Phase I Site.

During any subsurface disturbance, surplus excavated soil and debris would be handled and disposed of in accordance with applicable regulatory requirements. Evidence of a spill (if any) located or found during future investigation or disturbance would be reported to NYSDEC and addressed in accordance with applicable requirements. If subsurface investigation findings indicate that potential vapor intrusion concerns exist, the potential inclusion of vapor mitigation measures, including vapor barriers and sub-slab venting systems, would be evaluated.

If the conclusions of the Phase II investigation indicate any condition that would require a Remedial Action Plan (RAP) and associated Construction Health and Safety Plan (CHASP), then prior to the start of the proposed development work, a RAP and CHASP would be prepared and submitted to the NYCDEP for review and approval, which would summarize all environmental mitigation measures designed to protect against the potential for human or environmental exposure to known or unexpectedly encountered hazardous materials during and following construction of the proposed development. The RAP and CHASP would be implemented throughout the duration of project construction.

10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a Phase I Site of the nature, history, and setting of the Phase I Site for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Marc S. Godick, LEP
Senior Vice President

Eric Park
Technical Director

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Phase I Site, and to identify existing and/or potential environmental issues associated with the Phase I Site including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Phase I Site at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Phase I Site and the surrounding area, as well as a visual reconnaissance of current conditions.

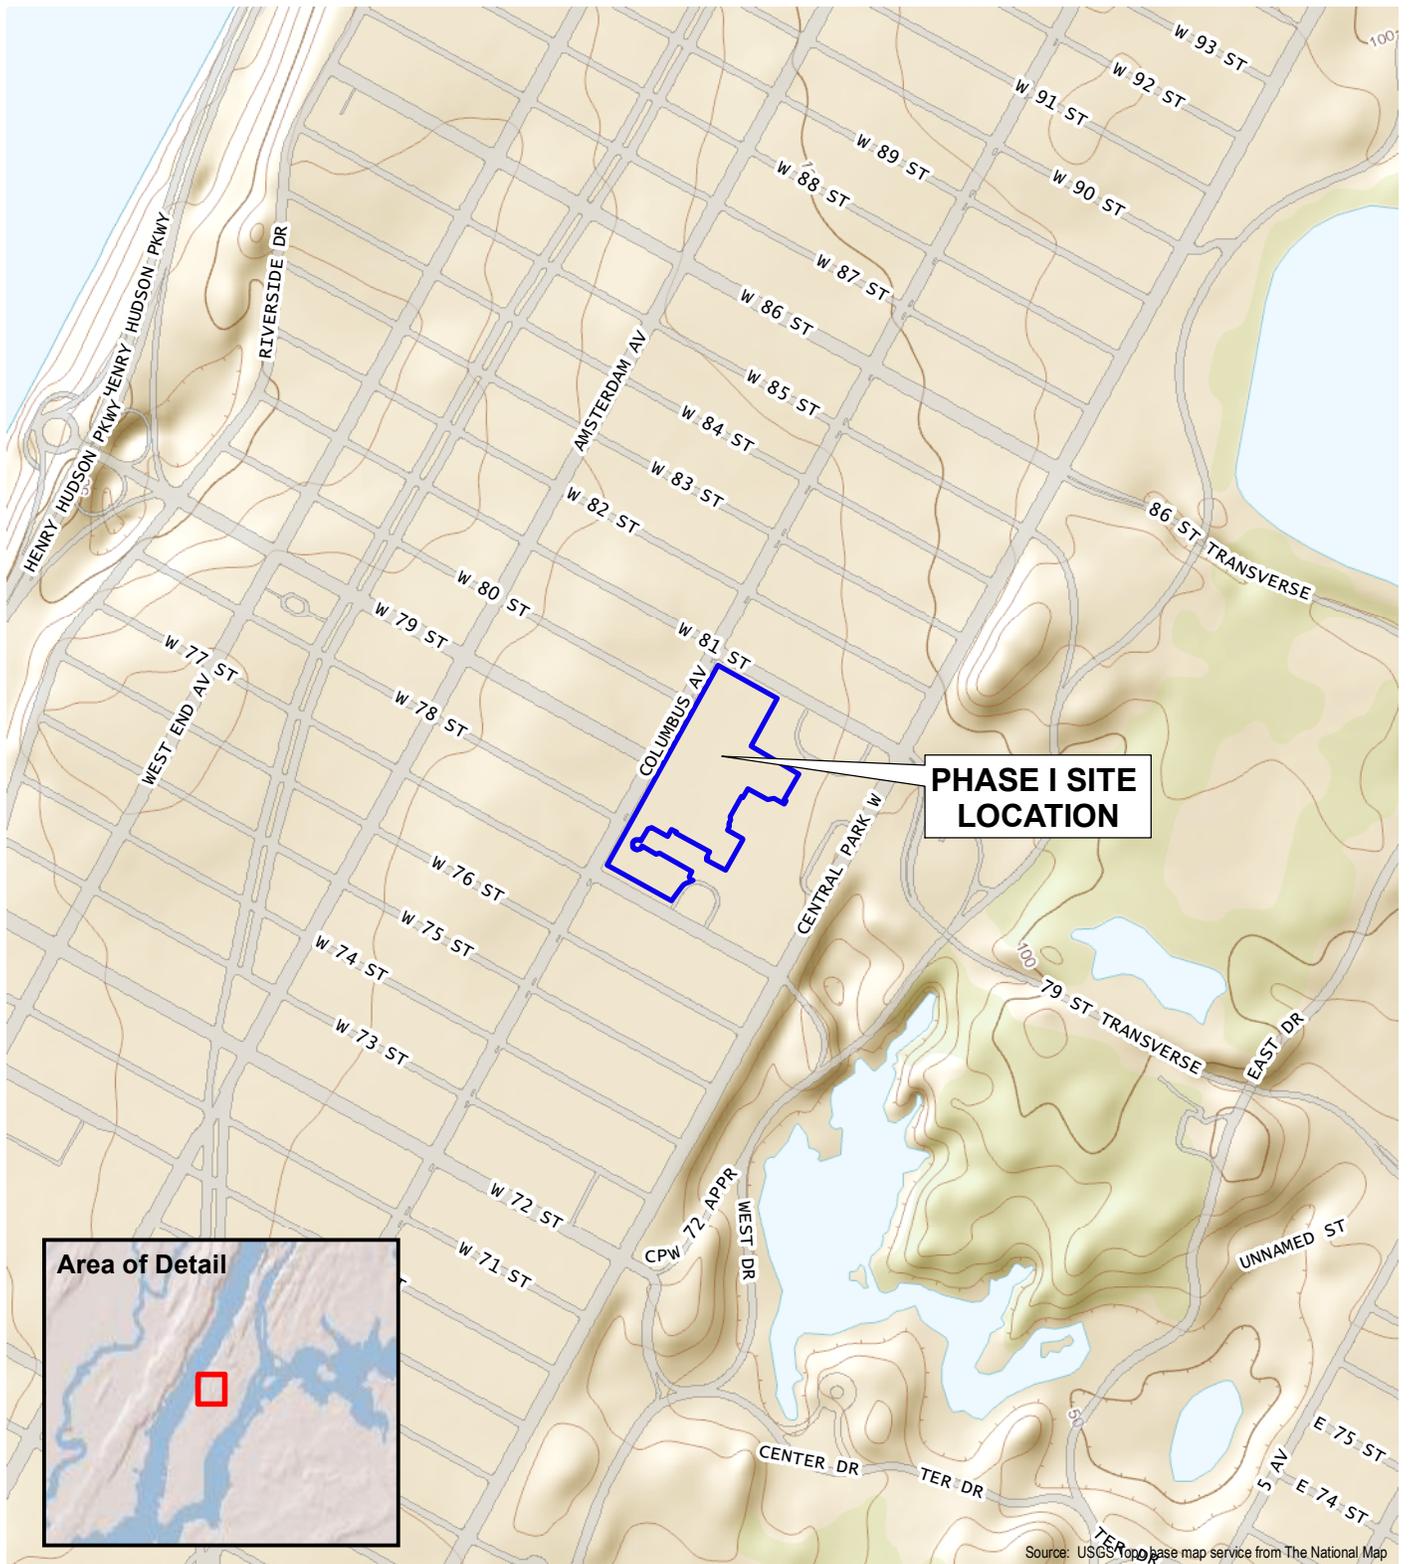

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Phase I Site and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than the American Museum of Natural History and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

APPENDIX C
REGULATORY RECORDS REVIEW

TOXICS TARGETING

PHASE I

ENVIRONMENTAL DATABASE REPORT WITH DATA CHANGE TRACKING

**AMERICAN MUSEUM OF NATURAL HISTORY
NEW YORK, NY 10024**

AUGUST 1, 2016

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

Section Two: Toxic Site Profiles

Section Three: Appendices

- *USEPA ERNS Check*
- *Unmappable Sites*
- *Hazardous Waste Codes*
- *Information Source Guide*

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your customized *Environmental Report*. It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Use Table Six to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Report Update Protocol

This updated Environmental Database Report highlights selected site data and location changes identified since the archived Report was generated. Each mapped site is color-coded as:

- **New Site**
- **Site With Data Changes Identified in This Updated Report**
- **Site With Location Changes in This Updated Report**
- **Sites With No Data or Location Changes Identified in This Updated Report**

New sites are highlighted in red. These include sites added to a database or mapped in the area searched by this updated report after the archived report was generated.

Sites with data changes are highlighted in purple. Changes involve data additions or revisions after the original report was generated. Data changes were identified by comparing selected data fields in this updated report with the archived report.

Sites with location changes are highlighted in brown. Location changes include revised map locations of more than five meters (100 meters in Nassau County). For sites mapped in New York City on a parcel-by-parcel basis, changes include map locations moved from the original parcel.

Sites with no data or location changes for selected datafields are highlighted in blue in maps and summary tables. These selected datafields are unchanged from the original report. The text for these site profiles is black.

This updated report searched the following datafields for changes:

National Priority List Sites

- Site description changes
- NPL status changes

NYS Inactive Hazardous Waste Disposal Site Registry

- Class code changes
- Site description changes
- Assessment of environmental problems changes
- Assessment of health problems changes
- Site type changes
- Acreage changes
- Confirmed waste/quantity changes
- Controls
- Projects

RCRA Federal Corrective Action Sites

- Additional corrective actions
- US EPA generator type changes

RCRA State Corrective Action Sites

- Classification code changes
- Site description changes

CERCLIS Superfund Sites

- NFRAP status changes
- Site Description

Brownfield Sites

- Classification code changes
- Site description changes
- Assessment of environmental problems changes
- Assessment of health problems changes
- Site type changes
- Acreage changes
- Confirmed waste/quantity changes
- Controls
- Projects

NYSDEC Solid Waste Facilities/Landfills

- Status changes

RCRA Hazardous Waste Treatment, Storage & Disposal Sites

- US EPA generator type changes
- Additional corrective actions
- Land disposal changes
- Storer changes
- Receives offsite waste changes
- Treatment changes
- Incinerator changes
- Transporter changes
- New waste codes

NYS Toxic Spills

- Note: spills includes tank failures, tank test failures, Unknown/Other and “Miscellaneous” categories
- Closed date changes
- Meets standards changes
- New material records
- Investigator remarks changes
- Cause changes
- Spill category/class changes
- Material class changes

NYS Major Oil Storage Sites

- Number of tanks changes
- Newly closed tank(s)

NYS Petroleum Bulk Storage Facilities

- Site Status changes
- New tanks, tank status changes, tank location changes, tank capacity changes, tank content changes
- Tank install date changes, tank test date changes, tank close date changes

NYC Petroleum Bulk Storage Facilities

- Description changes

RCRA Hazardous Waste Generators & Transporters

- US EPA generator type changes
- Additional corrective actions
- New waste codes

Chemical Bulk Storage

Site Status changes

Number of tanks changes

Newly closed tank(s)

Toxic Release Inventory Sites

Status changes

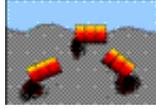

Civil & Administrative Enforcement Docket Facilities

New case record(s)

Toxic Site Databases Analyzed In Your Report

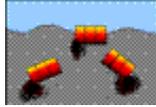

Search Radius

One-Mile

1) ***National Priority List for Federal Superfund Cleanup***: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile

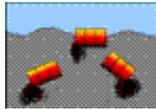

2) ***Delisted National Priority List Sites***: a listing of NPL sites that have been removed from the National Priority List.

One-Mile

3) ***New York Inactive Hazardous Waste Disposal Site Registry***: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

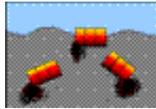

4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying***: a state listing of sites that qualify for possible inclusion to the NYDEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

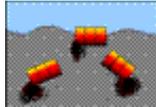

5) ***New York and Federal RCRA Corrective Action Activity (CORRACTS)***: waste facilities with RCRA corrective action activity reported by the USEPA and NYS DEC.

Half-Mile

6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile

7) ***CERCLIS NFRAP***: a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) ***New York State Brownfield Cleanup Sites***: a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile

9) ***New York Solid Waste Facilities Registry***: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) ***New York City 1934 Solid Waste Sites***: a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile

11) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Half-Mile

12) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile

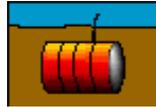

13) ***New York State Major Oil Storage Facilities:*** sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile

14) ***New York State Petroleum Bulk Storage Facilities:*** sites with more than an 1,100 gallon capacity for storing petroleum products.

Eighth-Mile

15) ***New York City Fire Dept Tank Data:*** tank data from 1997.

Eighth-Mile

16) ***New York and Federal Hazardous Waste Generators and Transporters:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile

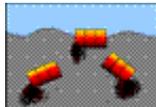

17) ***New York Chemical Bulk Storage Facilities:*** sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile

18) ***Historic New York City Utility Sites (1890's to 1940's):*** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile

19) ***New York Hazardous Substance Disposal Site Draft Study:*** a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile

20) ***Federal Toxic Release Inventory Facilities:*** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile

21) ***Federal Air Discharges:*** air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile

23) ***Federal Civil and Administrative Enforcement Docket:*** judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only
(250 ft)

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites:*** parcels assigned a special environmental (“E”) designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only

25) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the **FIRST STEP** in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. Systematic changes are made to correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Some information that has been withheld by government authorities remains included in Toxic Site Profiles and is identified as archival information. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Also please be aware of some other limitations of the information in your report:

- The digital map used by *Toxics Targeting* is the same one used by the U. S. Census or local authorities in New York City. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated. **FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;**
- **UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;**
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in the zip codes searched for the report as well as toxic sites without zip codes reported in the same county. **IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING* AND REFER TO THE SITE ID NUMBER.**
- New York State Department of Environmental Conservation Remediation Site Borders are approximate and may not align with tax parcel boundaries mapped by local authorities or the digital map used by the US Census Bureau. As a result, Remediation Site Borders may overlap parcels that do not involve site remediation activities. Selected parcels also can involve multiple Remediation Site Borders. Refer to individual site profiles for more information. Sites without profiles include potential new sites or sites that have not yet been publicly listed by DEC.
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. **YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;**

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. **YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.**

Section One:

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see *How Sites are Located*, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level (MCL)** listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

- 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
- 2 -- Significant threat to the public health or environment -- action required;
- 3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
- 4 -- Site properly closed --requires continued management;
- 5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
- 2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
- A -- Work underway and not yet complete;
- P -- Potential Site;
- D₁, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
- C -- Remediation Complete (formerly D2).

NO NATIONAL PRIORITIES LIST (NPL) SITES IDENTIFIED WITHIN 1 MILE SEARCH RADIUS

NO INACTIVE HAZ WASTE DISPOSAL REGISTRY OR REGISTRY-QUALIFYING SITES IDENTIFIED WITHIN 1 MILE SEARCH RADIUS

NO RCRA CORRECTIVE ACTION SITES IDENTIFIED WITHIN 1 MILE SEARCH RADIUS

NO CERCLIS SUPERFUND SITES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

BROWNFIELDS SITES (STATE & LOCAL) IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The site is located at 267-273 West 87th street in the Upper West Side neighborhood of Manhattan, New York. The site is approximately 0.23 acres(10,070 square-foot). Site Features: The site, which consists of two parcels of land, Block 1235, Lots 5 and 7. Lot 5 is improved with a three-story parking garage structure with a basement. Lot 7 is improved with a seven-story parking garage with a basement. Each lot has 50 feet of frontage along the north side of West 87th Street. Current Zoning and Land Use: The site is zoned R10A which allows mixed residential and commercial use. The site is currently vacant and inactive, and intended use will be for Residential and Commercial. The surrounding parcels are currently used for a mixed-use of residential and commercial complexes.

Past Use of the Site/Historical Use: The site was historically developed with two structures, which were possibly indicative of stables, in 1902. By 1912 the portion of the site identified as Lot 5 was improved with the current site building. The portion of the site identified as Lot 7 was improved with a structure identified as N.Y. Cab Company. This structure appeared to be the same structure depicted on-site in 1902. The current site building on Lot 7 was constructed in 1916. The entire site is currently utilized as a parking garage.

Geology and Hydrogeology: The site is approximately 80 feet above mean sea level. The topography of the site is generally level, and the surrounding area slopes to the west-southwest toward the Hudson River. The subsurface strata at the site consists

of historic urban fill material consisting of sands, silts, clays and brick fragments encountered ranging from 0.2 to 7.5 feet below ground surface. Groundwater was encountered at depths ranging from approximately 2 to 4 feet below ground surface. Based on groundwater gauging, localized groundwater within the bedrock is estimated to flow to the west.

CONFIRMED HAZARDOUS WASTE DISPOSED:

| TYPE | QUANTITY |
|-------------------------|----------|
| chromium | UNKNOWN |
| selenium | UNKNOWN |
| tetrachloroethene (PCE) | UNKNOWN |
| ethylbenzene | UNKNOWN |
| xylene (mixed) | UNKNOWN |
| toluene | UNKNOWN |
| trichloroethene (TCE) | UNKNOWN |
| sodium | UNKNOWN |
| naphthalene | UNKNOWN |
| cis-1,2-dichloroethene | UNKNOWN |

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil: A total of twenty-four samples were collected at depth ranging from 1 to 15.5 feet below ground bgs). Petroleum-related VOCs, 1,2,4-trimethylbenzene, ethylbenzene, and n-propylbenzene were detected at depth of 4 to 7.5 feet bgs at the south and southwestern end of the property, including elevated level of total xylenes with a maximum concentrations of 620 parts per million(ppm) exceed the soil cleanup objectives(SCOs) for unrestricted use(0.3ppm). Elevated levels of metals were detected at the east, northeast, and southwestern portion of the property. Average concentrations of chromium found on-site (approximately 51 ppm) slightly exceed the soil cleanup objective (SCO) for unrestricted use (30 ppm).

Metals were found one location of off-site of the property. Concentrations of chromium, trivalent found off-site (50.8 ppm to 70.8 ppm) slightly exceed the soil cleanup objectives for unrestricted use (30ppm). Groundwater: Two bedrock monitoring wells were installed on-site of the property and one bedrock monitoring well was installed off-site of the property at a depth of 15 feet bgs. An elevated levels of TCE and its associated degradation products were found in groundwater at the southeast end at lot 7 of the site, significantly high and exceed groundwater standards (5 ppb), with a maximum concentration of 160 ppb. An elevated levels of PCE also was detected at the southeast end at Lot 7 of the site, exceed groundwater standards (5 ppb), with a maximum concentration of 880 ppb, at a 15 feet below groundwater table near underground storage tanks (USTs) area. A moderate amount of BTEX were found at the northwest end of the site. An Elevated levels of total and dissolved metals were found in groundwater at the southwest (Lot 5) and southeast (Lot 7) end of the site, exceed groundwater standards. A moderate amount of BTEX and elevated levels of total and dissolved metals were found, with maximum concentration of sodium is 166,000 ppb down-gradient of off-site at the south end of the site at a depth of 30 feet bgs.

Soil Vapor & Indoor Air: TCE was detected in soil vapor at elevated concentrations of 2,400 microgram per cubic meter ($\mu\text{m}/\text{m}^3$) at the east end of the site and in indoor air at concentrations of 8.4 $\mu\text{g}/\text{m}^3$ at the central portion (Lot 7) of the site. BETX(benzene, ethylbenzene, toluene, and xylene) and tetrachloroethylene(PCE) were found at the east, west, north, and south end of the site, an elevated levels of PCE with a maximum concentrations of 7,100 $\mu\text{g}/\text{m}^3$ at the east end of the site. A moderate levels of VOCs including PCE, TCE and their degradation products were found of off-site of the outdoor air samples.

Data does not indicate any off-site impacts in soil vapor related to the site.

ASSESSMENT OF HEALTH PROBLEMS:

Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People may contact site related contaminants if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern at the on-site buildings, but the potential exists for people to inhale site contaminants due to soil vapor intrusion at off-site buildings.

PROJECT COMPLETIONS:

Operable Unit 01 - Remedial Program

NO HAZARDOUS WASTE TREATMENT/STORAGE/DISPOSERS IDENTIFIED WITHIN THE 1/2 MILE SEARCH RADIUS

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

- * Tank Failures;
- * Tank Test Failures;
- * Unknown Spill Cause or Other Spill Cause;
- * Spills greater than 100 units of quantity; and
- * Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

NO ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

ACTIVE TANK TEST FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

CALLER FOUND UNKNOWN QUANTITY OF FUEL IN MONITORING WELL

DEC Investigator Remarks:

5/15/13–Spill # 1206884 was consolidated with spill # 9502313.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY

This site was investigated by URS, who proposed installing a GW pump & treat system. Site was then transferred to LiRo, who reviewed the data and agreed with that remedial approach, but modified the design of the remedial system. Kolleeny approved their design, system was installed and is currently operating at site to address dissolved-phase groundwater contamination.

This spill transferred from Kolleeny to A. Zhitomirsky on 4/13/05. – JK

10/21/2005 Pump and treat system is effectively treating site contamination. AZ

2/9/2006 Reviewed Quaterly Monitoring Report dated September 2005. According to the report pump and treat system is effectively

depressing the groundwater table. GW contamination levels have been variable. Based on the most recent data, continued operation of the remedial system is warranted. AZ

4/5/2006 Reviewed system monitoring report dated 3/13/2006. Pump and treat system has been effectively collecting contaminants. LiRo is no longer responsible for this site as of the end of December 2005. AZ

9/20/2006 Reviewed system monitoring report submitted by URS and dated 8/23/2006. Pump and treat system is collecting contaminants. URS recommended continuation of the system operation because of exceedances in contaminant concentrations measured during last monitoring event. AZ

3/14/2007 Reviewed system monitoring report submitted by URS and dated 1/15/2007. 4 wells were not sampled. URS proposed monitoring instead of active remediation. I contacted J. Staten and requested that URS access the wells which were not sampled. After results are received and evaluated, then DEC will consider change of remedial strategy. Also, downgradient wells should be sampled. AZ

8-14-2007 Reviewed request for revised remedial strategy submitted by URS and dated 5/30/2007. In April 2007 gw samples were collected. EW-02 was flooded, EW-03 and MW-08 were under a dumpster, EW-04 appears to have been paved over. The four wells displayed total VOC concentrations ranging from 41 ppb in MW-04 to 119 ppb in MW-07. URS stated that the plume is essentially contained within the property boundary. Existing VOC concentrations are not effectively treated by chemical oxidation injections or oxygen source injections. URS recommended monitored natural attenuation for this site. AZ

8-17-2007 An e-mail was sent to URS: I have reviewed request for revised remedial strategy submitted by URS and dated 5/30/2007. In April 2007 groundwater samples were collected. EW-02 was flooded, EW-03 and MW-08 were under a dumpster, EW-04 appears to have been paved over. URS stated that the plume is essentially contained within the property boundary. Existing VOC concentrations are not effectively treated by chemical oxidation injections or oxygen source injections. URS recommended monitored natural attenuation for this site. DEC concurred with URS's proposals. However, wells which have not been sampled should be sampled and repaired if needed. AZ

12-7-2007 Reviewed report dated October 24, 2007 for the Third Quarter 2007. On July 2, 2007, URS collected groundwater samples from accessible wells. Wells EW-03 and MW-08 are covered by a dumpster and inaccessible. Each well exhibited VOC exceeding Groundwater Quality Criteria. Total VOC concentrations ranged from 15 ppb to 572 ppb in MW-07. URS will continue quarterly groundwater sampling. An alternative remedial technology may be required in contaminant concentrations remain elevated in MW-07. AZ

3-11-2008 Reviewed report dated December 10, 2007 for the the 4th Quarter of 2007. The highest VOC concentrations were detected in MW-07 -224 PPB. URS will continue quarterly monitoring sampling to monitor progress of natural attenuation. AZ

5-1-2008 Reviewed report dated March 14, 2008 for the 1st Quarter of 2008. The highest VOC concentrations were detected in MW-07 -185 ppb. URS proposed to continue quarterly monitoring sampling to monitor progress of natural attenuation. In my e-mail to URS/DDC/VB I recommended due to the decrease in contaminant concentrations reduction of groundwater monitoring and reporting to bi-annual. AZ

8-22-2008 Reviewed report dated June 11, 2008 for the 2nd Quarter of 2008. Total VOC concentrations ranged from 21 ppb in MW-07 to 103 ppb in MW-03. As per DEC's recommendation, URS will collect groundwater samples on a semi-annual basis. AZ

10-1-2009 Reviewed report dated June 1, 2009 for the 2nd Quarter of 2009. Total VOC concentrations ranged from 12 ppb in MW-11 to 325 ppb in MW-07. Dissolved phase contamination is limited to the area around the active tanks and dispenser. URS will collect groundwater samples on a semi-annual basis. AZ

3-2-10 Reviewed report dated December 7, 2009 for the 4th Quarter of 2009. Total VOC concentrations ranged from 80 ppb in MW-03 to 1185 ppb in EW-02. Dissolved phase contamination is limited to the area around the active tanks and dispenser. According to URS, gw analytical data for EW-2 is unusual showing fluctuation every six month from non-detect to over 1000 ppb. The well was in very poor condition until it was repaired on October 16, 2009, may explain the variability of the data. Fuel spillage from the dispensing area would have drained into the well causing periodic spikes in concentrations. URS will continue to collect semi-annual gw samples. AZ

2-18-2011 An e-mail was sent to URS/DDC/V. Brevdo: I have reviewed semi-annual groundwater monitoring report for the above spill number for the second quarter 2010 dated Aug.30, 2010 and submitted to DEC at the meeting on 2-17-2011. Relatively high persistent dissolved phase groundwater contamination remains at the site. An actual tank inventory should be created for this site and compared to the existing PBS records. Four 550-gallon USTs closed in place remain at the site. These tanks might be contributing to the existing contaminant plume. The tanks should be removed if feasible. If natural attenuation at the site is not progressing, more active remedial approach should be undertaken. Monitoring well MW-10 can be removed from the monitoring schedule. AZ

6-21-2011 An e-mail was sent to URS/DDC/V. Brevdo: Dear Kevin, I have reviewed the Semi Annual Monitoring Report through 4th Quarter of 2010 dated April 8, 2011. URS stated that active fuel dispensing system could be a potential source contamination. URS planned to assess this possibility. I concur with the URS suggestion. The results of this assessment should be submitted to DEC. An actual tank inventory based on a filed visit assessment should be created for this site and compared to the existing PBS records. NYSDEC registry should be updated to reflect current USTs and ASTs located at the facility. Also, URS should consider removal of four 550-gallon USTs which were closed in place. AZ

1-4-2011 the following email was sent to K. Shenahan/V. Brevdo/M. Asbagh: Dear Kevin,

I have reviewed a report for the second quarter 2011 for dated October 7, 2011. The report stated that the removal of four 550 gallon gasoline tanks, that were closed in place, is probably not feasible. There is a persistent contamination in monitoring well EW-2 (1189 ppb), which was repaired in 2009. I suggest excavating area around this well, if feasible. AZ

8-27-2012 Reviewed report dated April 10, 2012. The report stated that lingering dissolved phase contamination remains at this site, especially in monitoring well EW-02. This monitoring well is located within the active fuel dispensing area and thus this well might be susceptible to surface infiltration of spilled petroleum compounds. URS inspected the well which was repaired in 2009, and determined that the well appears to be competent. The contamination also may be due to the migration of lingering contamination from the surrounding bedrock. AZ

4-4-2013 Reviewed a monitoring report for the first half of 2012. Removal/excavation of the closed in place tanks is not feasible. URS installed ORC socks in three wells. AZ

11-6-2013 Reviewed a monitoring report for the second half of 2012. In November 2012, 1-inch diameter well was reconstructed into a 4-inch diameter well to allow for the installation of ORC socks. Socks were installed in this well, and replaced in three other

wells, immediately following the well reconstruction. AZ

11–26–2013 Reviewed a report dated May 9, 2013. The report calls for consolidation of spills #9502343 and #1206884. Veronica Zhune previously closed spill #1206884 (consolidated with spill #9502343). Also, the report contained closure report for two 2,000 gallons gasoline tanks. The tanks were closed in October 2012. Post excavation soil samples indicated soil contamination in the south and west excavation sides. A strong petroleum odor was present and a petroleum sheen was seen floating on top of the water surface. Visual and olfactory evidence of petroleum contamination was observed during soil and groundwater sampling. AZ

5–6–2014 Reviewed a semi–annual monitoring report for the first half of 2013. The report stated that the PBS database identifies tanks #001 and 002 (both 2,000 gasoline USTs) as being in service. However, these tanks were removed by Franklin in October 2012. The UST closure report dated December 5, 2012, prepared by Franklin, included PBS notifications for these tanks that were closed and for the installation of one new 2,000 gallon tank designated as#008.

The following e–mail was sent to K. Shenahan and V. Brevdo:

Dear Kevin,

I have reviewed a semi–annual monitoring report for the first half of 2013, dated October 15, 2013. The report stated that PBS database identifies two USTs as being in service while they were removed in 2012.

NYCDDC should submit a correct application to DEC PBS Unit clarifying this discrepancy.

Please include information regarding this issue in your next monitoring report.

Sincerely,

Alexander Zhitomirsky

AZ

10–23–2014 Reviewed a semi–annual monitoring report for the second half of 2013. The report stated that the PBS database identifies tanks #001 and 002 (both 2,000 gasoline USTs) as being in service. However, these tanks were removed by Franklin in October 2012. The UST closure report dated December 5, 2012, prepared by Franklin, included PBS notifications for these tanks that were closed and for the installation of one new 2,000 gallon tank designated as#008. Lingering dissolved phase groundwater contamination remains at this site, primarily around well EW–02. This well was replaced in 2012. AZ

4–27–2015 Reviewed a semi–annual monitoring report for the second quarter of 2014. Lingering dissolved phase groundwater contamination remains at this site, primarily around well EW–02. This well was replaced in 2012. The latest groundwater results show a significant increase in total VOC concentrations. The highest total VOC concentration of any well in the previous quarter was 13 ppb at well EW–02, as compared to 10, 269 ppb detected at that well for this quarter. There is no immediate cause for the sudden increase. AZ

4–27–2015 Reviewed a monitoring report for the third and fourth quarters of 2014. Lingering dissolved phase groundwater contamination remains at this site within the bedrock aquifer. The latest three groundwater results show a significant increase

in total VOC concentrations at four monitoring wells located near the source area.

The highest total VOC concentration of any well in the previous quarter was 7675 ppb at well EW-02. The average groundwater elevation from all monitoring wells for the second quarter 2014 was nearly 7' higher than for the first quarter. It is likely that the unusually high water table submerged a contaminated area of soil/bedrock that typically is unsaturated and allowed additional contamination to dissolve into the groundwater. AZ

4-5-2016 Reviewed a monitoring report for the first and second quarters of 2015. Lingering dissolved phase groundwater contamination remains at this site within the bedrock aquifer. The latest groundwater results show a significant increase in total VOC concentrations at four monitoring wells located near the source area.

The highest total VOC concentration of any well in May 2015 was 6,177 ppb at well EW-02. The average groundwater elevation from all monitoring wells for the second quarter 2014 was nearly 7' higher than for the first quarter. It is likely that the unusually high water table submerged a contaminated area of soil/bedrock that typically is unsaturated and allowed additional contamination to dissolve into the groundwater. Groundwater elevations have since returned to more typical levels. AZ

6-7-2016 Reviewed a monitoring report for the third quarter of 2015. Lingering dissolved phase groundwater contamination remains at this site within the bedrock aquifer. The latest groundwater results show a significant increase in total VOC concentrations at four monitoring wells located near the source area.

The highest total VOC concentration of any well in May 2015 was 6,177 ppb at well EW-02. The average groundwater elevation from all monitoring wells for the second quarter 2014 was nearly 7' higher than for the first quarter. It is likely that the unusually high water table submerged a contaminated area of soil/bedrock that typically is unsaturated and allowed additional contamination to dissolve into the groundwater. Groundwater elevations have since returned to more typical levels. August 2015 sampling event recorded the highest VOC concentration in well EW-02 at 3,529 ppb. AZ

Caller Remarks:

Caller advised unknown oil is spilling into sub basement through the wall and unknown where the oil is coming from. Clean up is pending.

DEC Investigator Remarks:

10/1/2015 – Feng – Duty Desk. Talked to Deanna Brown of NYCDEP HAZMAT (646-265-6130). DEP received a call complaining about oil spill in the basement and DEP responded to the spill. The spill is in the sub-basement. The first floor of the building is used for commercial purpose. She saw that the ground was wet and a puddle of oil on the floor. She could not tell whether it is leaking right now, but still could not exclude that it is from slow seepage through the wall. There are 2 points of contact on the wall that seem leaking and they are still wet. She inspected the tank which located in the basement in front of the building and it is intact. The problematic wall is located in the back near the courtyard. There is no piping running through the wall. She did not test the oil type. The spill happened 4 weeks ago. The building management did some investigation in the nearby building as they thought there was piping problem associated with the nearby building, but they could not find anything so they called in for a spill. She did not inspect any buildings nearby. There is odor inside the room with the oil spill. The rest of the building had no odor.

Building Management: Diego Vecenti 212-265-1577

open ttf – 1215632

10/20/15– DECPiper called diego to get update. Diego is no longer with Mgmt Co. I spoke with receptionist and explained who, why I was calling. Left message for his replacement.

Scott Price 'scottP@solil.com' 917-589-0408

5/16/16– DEC Piper received email from Curtis Breuer. I am doing a Phase I ESA for an adjacent property (171 W 71st St. *** suspected source property for this spill) to 166 West 72nd Street which has an active spill case numbered 1506947. You are listed as the investigator and we are hoping to find more information on this spill and its potential to be a REC to our target property.

Curtis Breuer Environmental Scientist/Geologist 45-09 Greenpoint Avenue Long Island City, New York 11104 Phone: (718) 784 7490 Fax: (718) 784 4085 www.athenica.com

DEC piper recommended phase 2 in area of drain in alley and along courtyard in rear.

NO ACTIVE HAZARDOUS SPILLS – MISC. SPILL CAUSES – EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM AND STORMS – IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS. All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

THE FOLLOWING ACTIVE SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE SEARCH RADIUS FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM, OR STORMS. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

TWIN 275 GALLON TANKS – ONE TANK WAS PUROUS – PETROLEUM TANK CLEANERS RESPONDED & PUMPED TANK OUT – DRYZOL PUT DOWN & WILL BE PICKED UP ON MONDAY AFTER IT HAS A CHANCE TO ABSORB

DEC Investigator Remarks:

OCTOBER 13, 2005 As part of the Spills Reduction Initiative, this spill (sp0106772)was assigned to Jason Pelton. On October 12,

2005 Jason Pelton spoke with Roger Romance at Metro Fuel Oil Corp. Metro Fuel was the agency that reported the spill on September 28, 2001. According to the discussion with Roger, the Metro Fuel dispatcher (Mike Shaw) reported the petroleum spill due to petroleum odors that were noticed. Roger indicated that Metro Fuel subsequently performed a service call on September 28, 2001 and identified a small hole in the bottom of the above ground storage tank in the basement. The quantity of petroleum reported was five gallons.

During the phone conversation with Roger Romance, Jason Pelton asked to have documentation on the service call sent to the NYSDEC Albany office. Roger subsequently sent a letter, via fax, documenting the service call and cleanup activities for the estimated 5-gallon petroleum spill. The letter was received on October 12, 2005.

Based on the small quantity of petroleum released (5-gallons), the documented cleanup activities by Metro Fuel Oil Corp, and the repairs made to the above ground storage tanks by Metro Fuel, the petroleum spill was closed by Jason Pelton on August 13, 2005.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 10/3/03 TIPPLE SENT LETTER REQUESTING DOCUMENTATION 11/18/03 DOCUMENTATION TO BE SENT

9/9/2005 – Tipple transferred outside of DEC Remediation – found a report and forwarded it up to Mike Komoroske in Albany.

Caller Remarks:

they figure at least but no more than 3 drums of contaminated soil. Clean up will begin tonight. This tank that has a hole in it, has not been used in a long time because the home owner has moved to natural gas. The tank has been pumped out and cleaned up, tank was cut and found the hole in the bottom

DEC Investigator Remarks:

Sangesland will send a CSL

10/12/2006 Island Environmental Tank submitted a report to the DEC dated Aug 29, 2006

10/24/06. J Krimgold reviewed the tank closure report submitted by Island Enviro. Tank, Inc. According to the report sludge was found at the tank bottom. The tank was cleaned, cut and removed. About 4.5 cu. ft of contaminated soil was also removed and disposed of. Six soil samples were taken around the tank. Samples do not exhibit excess of contaminants in the soil. NFA letter.

TANK L;ET GO AND IS SPILLING OIL; ON FLOOR AND HAS GONE INTO A SUMP PIT AND IS SHOOTING IT IN THE SEWER SYSTEM:

DEC Investigator Remarks:

12/19/05 Feroze. Spill is transferred from Ketani to Feroze.

01/23/06. Feroze,PBS of this spill is 2–084271. TTF is sent to:

Gerald Rivera Mann Realty Associates 1776 Broadway, 23RD Floor NY 10019

02/27/06. Feroze called to 212–977–0000. Ms. Jamie is the property manager of the building. A message is left for him.

03/15/06. Spill is transferred from Feroze to Kumer Patel.

04/06/06–Hiralkumar Patel. Spoke with Ms. Jamie (212–977–0000 Ext. 236, FAX: 212–977–0087) at Mann Realty Assocs. Ms. Jamie will contact Petroleum as they worked on site and will call back or send required documents.

Mann Realty Assocs 1776 Broadway New York, NY 10019–2002

05/04/06–Hiralkumar Patel. Left message for Ms. Jamie. 05/16/06–Hiralkumar Patel. Spoke to Ms. Jamie. she will call Petroleum and will call back. 05/22/06–Hiralkumar Patel. Spoke at petroleum. they dug out concrete floor in basement and removed it. they installed temp tank. no further work done. Left message for Ms. Jemi. 05/25/06–Hiralkumar Patel. Left message for Ms. Jamie. 05/31/06–Hiralkumar Patel. REceived call from Ms. Jamie. as per her, petroleum has removed their temp tank. Jamie will send documents which she has and will call petroleum about final report. told Ms. Jamie that the department needs end point sample

results also.

06/02/06–Hiralkumar Patel. received documents from Jamie Perna. this contains documents about new tank installation. as per notes in letter from NYC Dept. of Building, they have replaced 4000 gal AST with 3200 gal AST.

06/06/06–Hiralkumar Patel. Left message for Jamie. 06/09/06–Hiralkumar Patel. Left message for Jamie. 06/30/06–Hiralkumar Patel. Visited site. spoke with David Cresp (347–273–0058), super of building. building had old tank enclosed in concrete vault. David observed oil coming out from weep holes and notified his management company. owner changed tank and installed new 3200 gal AST on legs. tank has concrete wall around it with weep holes at bottom. during tank replacement, owner build new concrete pad to put tank on and painted tank box from inside and tank from outside. as per David, tank removal company took some soil samples after they removed old tank. currently, floor around tank box is in bad condition having broken concrete. and weep holes at bottom of tank box opens in this floor and because of this, tank box would not be considered as secondary containment.

spoke to Joe at Petroleum. he will call back with more information. Received call from Diana from Petroleum. as per her, petroleum replaced old tank but never took any soil samples.

Left message for Jamie to call back by Friday July 7, 2006.

PBS #: 2–084271. PBS record shows only one tank of 4000 gal capacity. no information about any tank removal or installation of new tank at site. need to update PBS records also.

sent out CSL to Jamie Perna at following address requiring to submit PBS registration, soil/groundwater delineation & installation of secondary containment. letter faxed to Ms. Perna.

Jamie Perna Mann Realty Associates 1776 Broadway, 23rd Floor New York, NY 10019 Ph. (212) 977–0000 Ext. 236 FAX (212) 977–0086

08/10/06–Hiralkumar Patel. spoke with Ms. Perna. she request copy of letter. send fax to Ms. Perna. property manager is Deborah Perna (212–977–0000 Ext. 238). 08/23/06–Hiralkumar Patel. left message for Jamie Perna. 08/31/06–Hiralkumar Patel. left message for Deborah Perna. received call from Jamie. she doesn't know about any soil investigation done after previous tank removal. she has PBS application ready and will send to PBS section. they are dealing with Petroleum about soil investigation around previous tank location. she will asked Petroleum to submit work plan by Sep. 15, 2006.

09/12/06–Hiralkumar Patel. received letter from Jamie Perna, Assistant property manager. she sent copy of PBS application, work invoice copy from petroleum. as per Jamie, property manager is out of office and once she comes back to office, Jamie will take her signature on proposal for soil/groundwater investigation and will send it to the Department. received work invoice copies for work done by Petroleum. summary: – first invoice (11/02/2004):– perform tank test and tank failed – Second invoice (12/13/2004):– pump out sump pit

– pump and clean 1–4000 gal tank

– disposed 500 gal of water – third invoice (12/27/2004) :– cut out and removed 1–4000 gal tank – fourth invoice (02/23/2005):– fabricate and install new 3,300 gal tank – fifth invoice (08/09/2005) :– disposed 40–55 gal drums – sixth invoice (09/08/2005) :– disposed off 100 gal of water

11/14/06–Hiralkumar Patel. left message for Ms. Perna. 11/29/06–Hiralkumar Patel. left message for Ms. Perna.
11/30/06–Hiralkumar Patel. left message for Elizabeth, assistant of Deborah Perna. Jamie Perna is no longer working at this management.

12/01/06–Hiralkumar Patel. Spoke with Ms. Perna. they haven't started any work yet and Ms. Perna doesn't have letter that the Department has sent on 06/30/06. she will check Jamie Perna's files for this letter. explained Ms. Perna that the department requires soil/groundwater delineation, tank registration and installation/correction of secondary containment. she will hire contractor and will send work plan for soil/groundwater delineation.

12/11/06–Hiralkumar Patel. received message from Ms. Perna (Cell: 347–723–8402). she asked copy of letter that was sent previously. spoke with Ms. Perna. sent out copy of letter in email to Ms. Perna (deborah@mannrealty.com)

12/18/06–Hiralkumar Patel. left message for Ms. Perna. 12/19/06–Hiralkumar Patel. spoke with Ms. Perna. she will call her contractor and will call back. 12/20/06–Hiralkumar Patel. left message for Ms. Perna. 12/22/06–Hiralkumar Patel. received email from Ms. Perna. she signed contract with PTC for soil/groundwater delineation. she will send further documents once she gets from PTC.

01/02/07–Hiralkumar Patel. received message from Ms. Perna on 12/29/06. PTC will start soil investigation this week.

01/11/07–Hiralkumar Patel. spoke with Mark. as per him, he was at scene when spill happened in 2004 and PTC installed new tank at that time. Mark saw area where oil spilled. as per Mark, owner did hire another company for spill cleanup in 2004, but no soil investigation was done at that time. Mark got proposal back and waiting for initial payment to start soil/groundwater delineation work. he will also ask owner to build barrier next to weep holes in tank vault.

03/27/07–Hiralkumar Patel. received report from Mark. abstract:

...PTC drilled under the tank in the center and at each end of the tank, at an angle to obtain soil from under the location of the tank from a depth of approx. 2 ft below the level of the bottom of the new tank (same location of the old tank)

...another sample was taken from an area adjacent to the tank from about two inches below the level of the concrete floor, where oil was observed at time of the leak.

...at the time PTC went to install the concrete pad and new tank that the area had already been broken, excavated, and that there were no VISIBLE SIGNS OF CONTAMINATION, NOR WAS THERE ANY LINGERING ODOR OF OIL IN THE SOIL.

no contamination found in any sample. based on available report, case closed. NFA sent to Ms. Perna. letter faxed to Ms. Perna and Mark at PTC.

Caller Remarks:

HAS A LEAK AT THIS APRTMENT BUILDING; OIL CO WILL BE IN TO SWITCH TANKS AND REPAIR: RND SERVICES INC. WILL RESPOND

DEC Investigator Remarks:

Sangesland spoke to Dorothy who is one of the resident owners of this co-op building and she will be the owner contact for this project. Dorothy says that the tank sprung a small leak and she called in because there was a small puddle under the tank. Bob Hayman and Nick Eagle from RND Services (845-348-6355) were called to the building. They said the leak was not that big and will return tomorrow with a temporary tank set up. Once that is on line, the existing 7,500 gal tank will be cleaned out, repaired and retested.

1/28/05 –Modified TTF ltr sent

03/29/05 – Sawyer – The owners contracted with Empire Environmental to have the 7,500 gallon underground tank removed. Empire was required to also excavate the tank grave and to send the clean end point samples to the Department. No further action necessary.

Caller Remarks:

Spill reported in 1995. Caller found more contaminated soil while investigating the site.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was HARRINGTON DEC (Sigona) Re-assigned to (O'Dowd) on 7/30/99. DEC (Sigona) with consultation from DEC (O'Dowd) requested that the investigation reports by AKRF (Rudko) be sent to (O'Dowd). This site was former PBS gas station at 332 Amsterdam Avenue with multiple spill reports. AKRF is supervising the construction of building with a 35' deep excavation. AKRF will monitor removal of any contaminated soil from site.

This spill was reassigned back to Sigona on March 1, 2000.

This site spill cleanup has been consolidated under Spill No. 9904995.

01/30/04 Reassigned from Rommel to Harrington.

Caller Remarks:

building under construction, old tank removed and contaminated soil encountered.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE Engelhardt responded:

Met with Joe Martino, foreman of building renovation being performed by RC Dolner Inc. (general contractor). Dolner is doing job for Great Atlantic & Pacific Tea Company [90 Delaware Ave, Paterson, NJ, 07503 – tel # (201) 505-3318] who is renting the building. The building manager is Marc Lippman [2101-2119 Broadway, NYC, NY – tel # (212) 799-6671]. Unknown owner.

Mr. Martino reported that they were doing excavation to install elevator shaft about 25 feet below grate when they uncovered an abandoned oil tank thought to have held no. 6 oil. They cut and removed tank and hired Unesco [tel # (201) 939-4000] to remove contaminated soil. Unesco foreman is Manuel Reinoso. Unesco is removing contaminated soil and placing in 1 yard containers and 55 gallon drums. Mr. Reinoso reported that either at the end of this week or next week the dispatcher for Unesco Anthony Moza will arrange to have a roll off delivered for transfer of the contaminated soil and disposal.

Observed excavation. Soil appeared to be contaminated with weathered fuel oil. Was very rich in color. Water was infiltrating the low points of the excavation. Drew sample in aerosol can cap and observed some oil droplets on water surface. Transferred from Engelhardt to Tibbe on 6/2/98.

Caller Remarks:

LEAK IN FUEL TANK CAUSED SPILL INTO CELLAR (CONCRETE FLOOR). EASTMAN OIL COMPANY ENROUTE FOR CLEAN UP.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND GROSS LEAK IN TANK. TANK OUT OF SERVICE. HEAVY FLOW OF #6 INTO BOILER ROOM. ADVISED MR. FRIEDMAN TO INVESTIGATE EXTENT OF PROBLEM. 10/04/2002 closed spill# 0001972, transferred this spill to Sangesland after speaking with Renee Lewis at AL Eastman. Eastman is currently cleaning #6 oil from the basement floor. The oil is apparently oozing back up through the floor, no file found on this site, owners never completed an investigation for this spill(MT)

Per secretary at Mr. Friedman's office, the building is owned by Mr. Friedman.

Contact: Mr. Issac Friedman 441 West End Ave – Apt 1C New York, NY 10024

10/8/2002 Sangesland sent a do Work letter to Mr. Friedman today with a deadline of Nov 8th to submit a Delineation Work Plan to the DEC.

12/23/2003 Sangesland sent another Do Work letter to Mr. Friedman with a deadline of Feb 25, 2004 to submit a Delineation Work Plan to the DEC.

2/26/2004 Property manager is now Leonard Wasner 212-706-0610 Sangesland explained that a series of soil borings will be required around the basement floor to determine if there is an oil contamination problem under the basement floor.

4/20/2004 Sangesland spoke with Anthony Lara of PTC. He was just at the site and the building owner has done a lot of

excavation on his own and Mr. Lara believes the digging is unsafe and structurally unstable. He recommends a DEC site visit ASAP to look at the area and to give DEC direction on what work is required.

4/21/2004 Sangesland met with Mr. Wasner at the site. One side of the former tank has been dug out down to bedrock and the building foundation wall. This was a major excavation and Mr. Wasner had a manifest for all of the soil which was removed. The area looked and smelled clean. There were a couple of spots of solid #6 oil that had layered between some rocks, but it appears that almost all of the oil contamination had been removed.

4/27/2004 Sangesland reviewed a submittal from Mr. Wasner concerning this site. A short narrative of the tank history and spill event, manifest & photos of the excavation.

Sent Contaminated Soil Ltr to:

Elizabeth Ronis 35 West 88th St NY, NY 10024

5/18/05 Tipple Updating/// The spill was initially called in at an incorrect address, the Database has been updated to reflect the actual release location at 45 West 88th Street. Letter to be sent to the updated address.

12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 12/21/05 Feroze, A letter is sent Richard to inform DEC the present status of the site.

02/02/06. Feroze called Richard. She doesn't pickup the phone and a message is left for her. 02/23/06 Feroze called Ms. Richard and left a message for her. CSL is sent to :

MS. RICHARD TZC 45 West 88th Street NY, NY 10024

03/06/06 Feroze. CSL returned to DEC. 03/15/06. Spill is transferred from Feroze to Kumer Patel.

05/04/06–Hiralkumar Patel. spoke to operator at Ira Conklin. she will call back with more information. Received call from Vinny (Cell: 718–509–5900) from Island Tank. they removed tank from location. it is 550 gal AST on concrete pad. when they removed it, they found some holes at bottom of tank and oil stains on concrete pad. removed concrete and found little contamination underneath it. removed contaminated soil and took end point samples. Vinny will send me lab results and disposal manifest.

05/08/06–Hiralkumar Patel. Spoke to Vinny. he is waiting to get lab results from some other person. he got disposal manifest and will mail me those. 05/15/06–Hiralkumar Patel. Spoke to Vinny. he is going to mail all the documents today.

05/18/06–Hiralkumar Patel. Received tank closure report from Vinny. abstract of report: – removed 550 gal AST and system – tank was examined, cut open and then cleaned and removed oil and water mixture with vac/truck scraped and gas free interior of tank. – pits and holes were noted on the tank. – tank floor was broken and approx. four drums (two yards) of soil and fill material in an attempt to dig it clean and it was disposed of at an authorized PCS facility. – no groundwater or static surface water was encountered. – Martin Geochemistry, conducted soil sampling – six soil samples under cement floor – Martin Geochemistry found samples to be clean. – as a safety consideration the owner elected to backfill completion of the sampling activities – tank was found to be void of any liquids at time of removal

report is not consistent. report doesn't have end point lab results and site plan with sampling locations. at one point they said they removed oil/water with vac truck and on second page saying that tank was found to be void of any liquids. Spoke to Vinny and asked to send lab results & site plan with sampling locations.

06/06/06–Hiralkumar Patel. Left message for Vinny (cell phone number is out of service) at 718–967–9424. Left message at TZC.

06/09/06–Hiralkumar Patel. Left message for Vinny. Received call from Vinny's office. spoke to Malissa. she told me that Vinny will contact geologist and will find required documents.

07/05/06–Hiralkumar Patel. Left message for Vinny. Received call from Vinny. he is still waiting to get lab results from company who did sampling and has lab results. once Vinny gets it he will forward this result to the Department. as per Vinny, tank was

empty when they removed it.

08/16/06–Hiralkumar Patel. visited site. met Julie Marshall, current owner of building. she has bought this property in 2005. Ms. Marshall doesn't know anything about contaminated soil removal from site. spoke with Larry Barns, contractor of building. as per him, tank removal company has removed tank. asked Ms. Marshall and Mr. Barns to submit tank closure report with endpoint sample analyticals.

Julie Marshall 45 W 88th Street Manhattan, NY 10024 Ph. (212) 864–6706

Larry Barns Integkral Design and Construction LLC Ph. (914) 497–0543 FAX (212) 254–9382

(203) 732–2992

sent CSL to Ms. Marshall. letter faxed to Mr. Barns.

08/22/06–Hiralkumar Patel. received copy of report from Integkral Design and Construction. this report i have previously from vinny. but this report doesn't have lab analyticals as well as sample locations on site plan. send email to Mr. Barns (jlbsea@rcn.com) requesting such information.

09/27/06–Hiralkumar Patel. received fax from Vinny stating that they are waiting for lab analyticals. spoke with Allen at Island tank. as they don't have lab analyticals for previous samples, they took new five samples and will submit final report.

10/11/06–Hiralkumar Patel. received closure report from Vinny. five soil samples taken from sides and bottom of tank area. no contamination found in any samples.

based on available information, case closed. sent NFA letter to Ms. Marshall. letter faxed to Mr. Barns and to Mr. Lovari.

BOTTOM OF TANK RUPTURED; IS COTAINED AND IS CLEANING UP AT THIS TIME

DEC Investigator Remarks:

Sangesland spoke to Philip Caputo of Economy Fuel. He said this is the first time he has delivered to this address. 2 hours after delivery, the owner called to say the house smelled of oil. Oil company sent a crew to the house to clean up.

Sangesland spoke to Mr. O'Connor (homeowner). He said the spill is about 50 gallons from a hole in the bottom of the tank. The basement is unfinished, but unknown if any drains were impacted. 01/30/06 Sharif// I spoke with David Oconnor,(212)877-1894, son of R.Oconnor and he informed me Economy Fuel cleaned up the spill and fixed the tank system.I suggested him to send DEC relevant documents. 03/21/06 Sharif Rahman- Clean up letter was sent to Robert O'connor 264 W. 71st Street New York, NY 10023 04/05/06 Sharif Rahman- Mr. Franky from Economy Fuel,(718)599-5100 called to know what needs to be done to close out the spill case. I told him to send DEC a report stating the brief clean up activities with waste disposal manifest, photographs and soil sampling result if oil spill had seeped to the soil. He said he would do that. 04/20/06 Sharif Rahman-Rec'd invoice of clean up, manifest and brief description of clean up job. No soil/sewer was impacted. NFA required.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 1/2/2002 – Sangesland spoke with F&N about the site.

F&N installed 5 wells in the sidewalk around the tank of a #6 oil spill. Well # 1,2,5 are hooked into a Floating Recovery System. Installed about 5 years ago and was very effective at pulling out lots of free product in the begining. Now the issue is remediation of saturated soil in the areas away from the recovery wells. #6 oil does not travel freely in soil and the existing system will not address the area more than three feet from the wells.

Whoever takes over operation of this project will need to develop a remediation system which addresses this suspended oil.

2/3/2003 Sangesland visited site with RND Services & Property Manager. Site has been excavated and the existing tank has been cut up. 90% of the old tank has been removed along with a large amount of contaminated soil. According to RND, the hole has been dug down to bedrock and as wide as possible.

Sangesland requested a closure report with end point samples, photos and a write up describing the small residual contamination left at the site.

7/8/2003 Sangesland reviewed a report by RND dated January 2003, but submitted to the DEC on July 7, 2003. This report documented all of the work done to excavate the old tank along with 156 tons of contaminated soil. Due to the location of the the Con Ed box and the adjacent street, additional digging was not possible. The end result was a reasonably clean hole with some minor SVOC hits on the street side wall. The excavation went down to the bedrock under the tank and right up against the building foundation.

No additional work will be required at this site.

Spill Closed – Austin – 8/19/09 – See also spill # 0200291, et. al. Con Ed vault impacted by this spill – end

Caller Remarks:

CALLER STATES THERE IS AN OLD TANK ON SITE AND PRELIMINARY INVESTIGATION REVEALS TANK MAY BE LEAKING

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 1/13/2000 Sangesland spoke with Matt Stock (GAC Environmental 212-875-9506) He said the problem was in the basement of a small co-op building. Resident of basement unit complained of oil smell. Oil tank in rear of building was replaced in 1998(?) with a new tank. Investigation of smell was towards the front of the building. Plywood floor was pulled up to find oil staining on the bare dirt (no cement floor). Further investigation found an abandoned oil tank (approx 500 gal) located under the front sidewalk. Leak probably came from there.

GAC plans on pulling up the plywood floor in the basement, track it back to the source, scope out the size of the problem and then propose a clean up procedure. At this time the tenent of the apartment is living in a hotel.

Sangesland plans on visiting the site on 1/14 at 9 AM.

1/14/2000 Sangesland went to the site and confirmed info above. Matt Stock will work with Carolyn (managing agent) to open up tank wall area in outside alley area. Also possible opening in basement apartment.

1/20/2000 – Carolyn (managing agent) called and asked Sangesland to call insurance company to brief them on site problem. Contact is Alex Seaman at SRW – 516–496–7600. Mr. Seaman was briefed and will look into environmental contractors.

2/18/2000 Carolyn is no longer working at the managing agent. New contact for this project is Joe Migarth (Spelling???)

4/17/2000 Excavation investigation indicates 2 small holes were found in the sidewalk fill pipe. This could be the source of the problem found in the basement apartment.

4/17/2000 Sangesland went to the site and saw the excavation of the basement area. Matt Stock of GAC was running the environmental cleanup of the site. Sangesland, Mr. Stock and various members of the co-op board, resident & managing agent were present. Based on this site visit, the following steps were outlined to solve the problem:

1) The excavated material has been removed from the site and properly disposed of. 2) Pour Biorem into all excavation openings (basement, electric meter room and street excavation)– This material will biologically eat any residual petroleum which was not removed by excavation. 3) Coat all basement edges with epoxy– This will help prevent the movement of any vapors back into the basement area. 4) Install a layer of pea gravel in the open area below the basement floor level. 5) Prior to pouring a new basement floor cement slab, install a passive venting system to remove any residual petroleum vapors from beneath the basement slab. This system will consist of a network of 3 inch slotted PVC piping under the basement slab in the pea gravel layer. The end of this pipe will extend over the top of the interior footing, through the basement wall and out into the exterior vault area. **** Note***** If a problem comes back in the future, a slow speed blower can be attached to this venting system to suck out any vapor buildup in the area under the slab floor. 6) Above the pea gravel a layer of 30 mil plastic will be laid out to offer additional vapor blockage. 7) Above this plastic, a new concrete floor slab will be poured which will be painted with epoxy paint. 8) All openings, cracks and spaces in the floor will be filled and coated with epoxy to restrict future vapor flow.

Matt Stock wrote up these notes and submitted them to the DEC in a letter dated 4/28/2000.

7/7/2000 Matt Stock submitted a letter dated 7/5/2000 in which he said all of the work outlined above had been completed.

Spill Closed out 7/7/2000

DEC Investigator Remarks:

2/11/05 MT/// 10,000 gal #6 FO tank sprung a leak, PTC responding with 2 vac trucks and a spills van to the scene. Plans to clean floor, empty leaking tank, install temporary tanks today.

10/26/2005 Sangesland received a letter from Petroleum Tank Cleaners stating that the initial spill was 30-50 gallons of #6 oil from the tank into the tank room floor. The area was cleaned and manifested.

The tank was removed and eventually replaced. PTC tried to drill a hole through the cement floor of the tank room to determine if the soil underneath was impacted. After 14 inches of cement, the drilling was stopped.

Spill Closed.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY 1/17/96 Contaminated soil found in excavation. Stockpiled on site.

1/25/96 Product floating on water in gasoline tank removal excavation. May be fuel oil from adjacent active tank. Will test tank.

TRANSFERRED FROM Y.KRIMGOLD.The site is being remediated under NYCDDC COntent Order. It was managed by Y. Krimgold and then transferred to A. Zhitomirsky.

Department received and reviewed a Quarterly Status Report (June-September 2004)from the City's contractor. The site has groundwater contamination plume. Bioremediation technology (Permeox Plus injection) was applied at this site to treat

groundwater. MTBE was the only contaminant detected at the site. MTBE concentrations are decreasing. Consultants will perform another round of groundwater sampling and if groundwater criteria is not exceeded they will request a spill closure. The report was reviewed and approved by the staff. DEC recommended that if contamination persists in MW-7, currently the only well at the site exhibiting contamination, this well should be over-drilled and reinstalled. (A. Zhitomirsky)3/2005

6-6-2005 Reviewed Request for Spill Closure issued by URS in January 2005. According to the report contaminant concentrations in all existing monitoring wells at the site have been below NYSDEC Criteria for two consecutive sampling events. Spill was closed and NFA letter was issued. AZ

4000g tank

DEC Investigator Remarks:

3/27/13 AFrischeisen intern TTF letter sent.

8/1/2013 Sangesland reviewed a letter dated June 14, 2013 from Donna at ABC Tank (718-272-2800). Letter says 5,000 gal AST failed the test because of a problem with lines running thru a poorly sealed manway. Manway was replaced and new suction & return lines were connected and the tank/system passed a retest on 5/1/2013. They also said that no contamination was found during any of this work. Spill closed.

TANK TEST FAILURE ON A 1500 GALLON ABOVE GROUND TANK. UNK IF THERE IS A LEAK.

DEC Investigator Remarks:

05/22/09–Vought–Duty desk officer. Spill assigned to DEC Krimgold as tank test failure of PBS Site (See PBS#2–234222). Vought called Phil Fazin (516) 375–5890 and tank is covered in concrete. Anthony Lara from Riteway will remove concrete and tank did not hold pressure and odors were present. Fazin unsure if tank is leaking as in contact with concrete. Vought called and spoke to Anthony Lara from Riteway (917–709–3317) who had crew onsite beginning to remove concrete vault around AST. Lara noted that failure was dry leak and that updated PBS registraton would be sent in as owners contact info had changed. As per Lara, TTF letter should be sent to:

Phancz Realty P.O. Box 931 Planetarium Station New York, NY 10024

Vought also spoke with DEC Krimgold who required that no additional deliveries by performed until tank is repaired. Vought sent out TTF letter with one month due date and additional requirements of submission of updated PBS registration as well as no new deliveries until tank is repaired. Vought received callback from Lara who was onsite and was removing oil from tank so that metal weld could be performed.

08/13/12 – LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo.

12/4/2012 Sangesland reviewed a letter and tank test passing from RiteWay. A new metal patch was welded onto the tank back in 2009 and the tank was retested and passed. See letter and tank test in eDocs.

Caller Remarks:

repair/retest pending – unsure of status of cleanup

DEC Investigator Remarks:

7/25/11 – Raphael Ketani. The spill was called in today as a tank test failure. The site is a 5 story early 1900s apartment building in the middle of the block.

The block and lot are 1169 and 35. The owners are 202 West 78 Street Tenants Corp., 10024. The building is a co-op and the management company is Merlot Management, 201 West 91 Street, Ste 1D, NY, 10024.

According to Donna Vieni of ABC Tank (718) 272–2800, the tank is a 1080 gal. with #2 oil. They don't know what part of the tank system failed. So they are going to isolate and retest. Right now, ABC crew can see the top of the tank through a 5 foot diameter hole on top. The tank is behind a wall. So they don't know whether it's on stilts or on the ground. It sits behind a wall which is also part of an apartment. So they're trying to avoid knocking down the wall in order to deal with the tank.

I sent a TTF letter to Merlot Management.

8/19/11 – Raphael Ketani. I spoke to Christopher Quintana of ABC about the tank test failure. He said that ABC went over there yesterday and tested the tank system. They used the E–Z horner test and noted a vacuum loss. This took place with the tank empty and clean. So they replaced most of the vent pipe, the fill and another pipe coming from the tank. They did the test again and the system still failed. So Mr. Quintana told Tom, the monitoring engineer for Merlot Management, that ABC would have to examine all of the fittings with a pressure test and soap to see where the leaks are. Tom agreed to the new test. Mr. Quintana added that the fittings on all of the old lines were so loose that he could hand turn them. Also, someone many years ago had made two cut outs on the tank in order to get inside and had reattached them with two part epoxy. The epoxy was porous. So this added to the failure. Mr. Quintana told Tom that ABC would have to knock down the sheetrock wall that closed off the tank in order to test all of the fittings. Tom was in agreement with this, too. With all of these loose fittings, I asked Mr. Quintana whether he could determine that oil had leaked from the tank system. He said that there was a slight odor of oil once you opened up the tank room, but nothing else. Also, he said that the white painted sheet rock did not show any signs of oil contamination or leakage. Lastly, he said that he steel welding crew had entered the empty tank and didn't see any holes. The two cut outs were properly welded to the tank. The new test will take place monday, 8/22/11. Mr. Quintana will inform me regarding the test results.

9/8/11 – Raphael Ketani. Mr. Quintana (718) 272–2800 of ABC called me today. He said that the tank passed the integrity test will all of the lines attached. He will send me the paperwork. He added that ABC repaired the top of the tank, the vent line and fill pipe fittings. The complete report will be sent to the DEC tomorrow.

Later, I received the tank integrity test report from Mr. Quintana by e-mail. The testing was performed by Estabrooks and the report was dated 8/26/11. The information showed a passing test with consistent results. I had no comments. Mr. Quintana wrote that the full report will be forthcoming soon.

9/16/11 – Raphael Ketani. I tried to contact Mr. Quintana, but I could only leave a message requesting the closure report.

9/19/11 – Raphael Ketani. Mr. Quintana called me back. He said that he will talk to the secretaries and have them send me the full closure report as they have all of the documentation. I asked him whether there are any odors or oil staining left. He said that there were no odors and the little staining that was present had been cleaned up.

9/20/11 – Raphael Ketani. Today I received a FAX containing the closure report for the work that was performed at the site. The FAX contained a cover page, a page explaining the work that took place, a copy of the passing 8/26/11 tightness test report and a diagram showing where the 1080 gal. tank was in relation to the building and the sidewalk. I reviewed the report and didn't have any comments.

Based upon the information in the case file and the database notes, it appears that ABC Tank made the necessary repairs to the tank system. Also, the system tested tight. Therefore, I have determined that there is no threat to the public or the environment. I closed the spill case.

TANK FAILED THE TEST.ABOVE GROUND TANK

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 1/30/2003–Vought–Tank Test Failure letter sent by Vought by Fax and mail on 1/30/2003.

11/12/2003–Vought–Received affidavit from James Merlo (Bd. of Ed.). Affidavit was for temporary abandonment of one (2000–gallon) fuel oil UST located in a vault on saddles. Tank will remain out of service until funding becomes available for replacement. Contents of tank were removed, tank was thoroughly cleaned, fill line was cemented, oil lines were disconnected and capped and fuel oil tank was stenciled with out of service date. Vought called Merlo to find out extent of fuel release from vault (if any) and phone was repeatedly busy.

1/7/04–Vought–Spill transferred from Vought to Austin.

01/27/04 – Sawyer – Spill transferred from Austin to Sawyer.

07/16/13 – Spill Case is transferred from Leszek Zielinski (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision – Tank Test Failure Spill Case. VB

12/26/2014 – V. Brevdo This spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, and no information that this tank test failure will be an issue in the future. Spill is closed effective 12/26/2014. No spill case closure letter is issued. VB

TANK IS LEAKING FOUND WHILE REMOVING- 7500 GALLON TANK

DEC Investigator Remarks:

Building is a senior citizens housing apartment. An above ground fuel oil tank was removed from the basement and the contractor discovered oil staining under the tank. They believe there is contamination under the tank location. They have already applied to the City for money to hire a contractor to locate and remove any contamination that may be there. CSL has been sent to: Mr. David Gillcrst Project Find 160 West 71st St - #2F New York, NY 10023 11/14/06 Rahman- RWP from Airtek Environmental tells about removal of contaminated soil from the former tank location. The former 7500 galon tank was partially buried and rested on a shallow bed of soil(6' deep). Above the level of the soil is a second layer of concrete. The UST was set into the upper concrete, was removed in October' 06, small holes were noted in the bottom. 10/19/07 Left a voice messege for Vic Ricchezza(Air Tek) asking status on this site. (SR) 02/11/08 Rec'd report from Airtek Environmental Corp. The UST was rested on concrete slab, which was removed. All soil between two concrete slabs were removed, no soils left for end point sampling. No breaks in the lower concrete slab was found and the standing water level did not decrease before removal. Therefore, no sample taken from the below concrete slab. Disposal manifest were provided. NFA required. SR

Caller Remarks:

fill and vent line are in the ground and shows release although it does not look like loss of product.

DEC Investigator Remarks:

Spill initially reported at 260 Columbus Ave (corner building) PBS 2-360929 was traced back to PBS address – 101 West 72st. Sangesland left voice message with Prop Mgr Arthur Rauzman 212-344-1444

10/26/2011 Sangesland left ANOTHER voice message for Mr. Rauzman

1/19/2012 Sangesland spoke to Mr. Rauzman's supervisor... She promised a return call today... New Contact for the site is Dominic (Chase) 914-774-3838. He has hired John at NY Plumbing (917-440-2403) Old tank is out of service. Temp tanks set up and waiting to switch the building to Natural Gas. Bank is waiting for approval to fill the tank with foam and abandon the tank. Sangesland said I need info on the fill line and vent line.

1/26/2012 Sangesland inspected the basement. No staining on the basement walls. This whole area of Columbus Ave was dug up by the city about 5 years ago. New streets, curbs and sidewalks. Remote fill line was closed prior to this work. Can not identify where the remote fill used to be. No sign of spill, so DEC is closing this spill case out.

10,000 gallon tank.

DEC Investigator Remarks:

04/21/14–Hiralkumar Patel. alternate address: 12–18 West 72nd Street

no other spills found.

PBS #: 2–241415. as per PBS record, the site has one 10,000 gal #2 oil AST on saddles. the tank was installed in Jan. 1952.

1:48 PM:– spoke with Protest front desk. the 10,000 gal tank system failed in dry portion during test on 03/26/14. Protest conducted partial isolation test on 04/07/14. they tested tank, remote fill and vent line together and found leak. Protest suspected leak in remote lines and has submitted work proposal about a week and half ago. Protest technician did not observed any contamination. the tank is in vault under the sidewalk.

2:06 PM:– spoke with Mr. Hinckley, property manager. he has no knowledge about the tank system test.

Oliver Cromwell Owners, Inc.

****property owner**** c/o Tudor Realty Services 250 Park Avenue South New York, NY 10003 Attn.: Thomas Hinckley

****property manager**** PH. (212) 557-3600 email: tomh@tudorrealty.com

2:12 PM:- spoke with Mr. Salsano, co-op board president. he mentioned that they have sealed the remote fill port and Protest will replace the leaking line. Mr. Salsano asked to send letter to his attention.

Oliver Cromwell Owners, Inc.

****property owner**** c/o Al Salsano Co-Op Board President 12 West 72nd Street, Apt. 30A New York, NY 10023 Ph. (212) 813-3016

(917) 327-8851 email: alsalsano@aol.com

2:29 PM:- sent TTF letter to Mr. Salsano. letter emailed to Mr. Salsano.

06/06/14-Hiralkumar Patel. 10:36 AM:- received call from Rene Lewis (917-569-8323). he mentioned that the initial tank test failure was caused by a small leak in flange on fill line. the leak was inside the building. he will replace the leaking portion and will retest the system. he mentioned that report will be submitted by 06/13/14.

06/12/14-Hiralkumar Patel. received fax from Rene. he removed leaking 3 inch flange on fill line and replaced with 3 inch union. the tank system was retested and it passed.

based on available information, case closed. 12:13 PM:- sent spill closure letter to Mr. Salsano. letter emailed to Mr. Salsano.

PETROLEUM TANKS WILL RETURN TO FIND PROBLEM:

TANK WAS EMPTY DURING TEST

DEC Investigator Remarks:

need to send TTF letter 07/03/06–Hiralkumar Patel. Spoke to Diana at Petroleum. they haven't gone yet for isolation test. she gave me owner's information as: Hotel Belclair (212) 706–4476

tried number for owner, but no response. 07/05/06–Hiralkumar Patel. Left message for manager at hotel.

7/7/06 spoke with Paul Cadenas of Belleclaire Hotel. Petroleum Tanks coming next week to retest. he told me he would call regarding the results. sent TTF letter. bf.

7/7/06 left voice mail message for M. Salamack of Petroleum Tanks to ask for date of test and for results. bf.

5/24/07 bf: Called Mr. Cadenas and left message. Sent 2nd ttf letter to: John Huber Lophijo Realty 19 Dawson Lane Jamesburg, NY 08831

5/30/07 received message from mark Salamack of Petroleum Tank Cleaners. He said he's calling because they were frantic in response to my letter. Soil samples were taken. No work was done lately because the hotel wasn't paying PTC. Also received message from Tara Gowdy of Hotel Belleclair (212)706–4469. She requested a call back. I called her back and she states that she thought the spill was closed. She will make sure that PTC gives DEC what is required (the letter/report). bf

6/1/07 This case is to be combined into Spill 0603176 which is at the same site and is a result of the tank failure. Administratively closed. bf

Caller Remarks:

east side tank. above liquid leak.

DEC Investigator Remarks:

11/7/05-Vought-Off-hours duty responder. Vought called Petroleum Tank Cleaners (Chris Gorga) and not sure if tank will be retested as they were subcontracting. West side tank may also need testing. Gorga requested Vought call Ray or Anthony Lara. Vought called PTC and left message for Ray to return call to provide info on owner and further action on UST. Vought received call from Ray and work was for Castle Oil Company (Jim Carey 718-579-3410). Vought called Jim Carey for contact info:

250 West 77th Street NY NY 10024 Attn: Sidney 212-706-4471 fax 212-362-1004

As per Jim, 2000-gallons of #6 fuel oil was delivered on 10/29/05 and Castle was notified that gauge did not record a delivery. Tank was opened and contents were gone as of 11/3/05. Basement was inspected and no odor, no oil was found. Vought ran PBS and contact info is Sidney Zimmer (212-362-7700). Vought called Zimmer and he was skeptical of spill amount lost. TTF letter to be sent to:

Belliclaire Hotel Lophijo Realty 250 West 77th Street New York, NY 10024 Fax: 212-362-1004

Vought sent out TTF letter to Zimmer.

12/06/05-Vought-Received call from and spoke to Paul Cardenas (Hotel Bel Claire 212-706-4476). TTF failed pressure test due to broken vent line that has been replaced. New system test was performed and passed. Missing 2000-gallons was siphoned over to west tank (3000-gallon #6 fuel oil) due to valve left open. Paul will fax in results to DEC.

12/7/05-Vought-Received faxed copy of test results from Hotel BelleClaire (Paul Cardenas). The vent line to this 4000-gallon tank has been replaced and the tank has passed the pressure test. As of the missing 2000-gallons of oil it has been determined that the main supply valve on Tank #1(4000-gallon) capacity was not completely in the closed position when Tank #2 (3000 gallon capacity) was switched over into service causing the product in Tank #1 to pump out with the product in Tank #2. There has been no evidence of any petroleum release or any damage to Tank #1 itself. Vought called Paul Cardenas and faxed him copy of closed spill report. Spill closed by Vought.

 Caller Remarks: NO REMARKS GIVEN FOR THIS SPILL

DEC Investigator Remarks:

9/6/13– ttf letter sent

4/9/15: Mahat DEC Mahat received a call from Donna (ABC Tank) inquiring about the spill case manager. Spill case is associated a above ground tank in the facility. There is no correpeondace fulfilling the letter that was sent on 9/6/13.

However, the facility also has a 7,500 gallon UST (non–spill related tank). ABC has been retained to abandoned the tank in place. Technical went down to the tank in order to collect three samples. Since the tank is sitting on tht water table, the tank was flooded with the water. ABC tank took the GW sample and it came out to be clean. ABC tank is preparing a tank abandon report to DEC PM attention for a review.

Also, Below is the point of contact for TTF for abaove ground tank:

Stahl Stahl LLC Jermy : 212.826.5487 John : 212.826.5486

4/9/15: Mahat Spill case has been reassigned to DEC Mahat as discussion with DEC Demeo.

Email confirmation was received that the tank has been repaired and retested with passing result. John, I'm not in the office right now, I know that the tank was tested and failed because of a defective vent pipe, the vent was replaced same day and tank was retested and passed. Second test should have cancelled out first. Let me talk to my installation Dept. And see why it didn't. Sounds like a paperwork problem here.

Kevin Amass Service Manager National Mechanical Services Inc. P–201–488–5151 X–102 F–201–488–5140 C–201–206–5051

DEC is waiting for a spill case closure report.

6/5/15: Mahat DEC Mahat has sent an email out to Mr. Amsaa requesting for a closure reprot for the spill case.

7/21/15: Mahat DEC Mahat received an email confirmation from Kevin Amass that the repair has been performed and tank passed the pressure test. Email :

John, I'm not in the office right now, I know that the tank was tested and failed because of a defective vent pipe, the vent was replaced same day and tank was retested and passed. Second test should have cancelled out first. Let me talk to my installation Dept. And see why it didn't. Sounds like a paperwork problem here.

Kevin Amass Service Manager National Mechanical Services Inc. P–201–488–5151 X–102 F–201–488–5140 C–201–206–5051

Based on the email confirmation, the Department does not warrant nay further investigation on the site. Spill case will be closed in DEC Spill Database.

Tank test failure, no known loss of product. 3000G tank

DEC Investigator Remarks:

2/15/13–Vought–Called and spoke to Rob Hill (Fax:718–855–7244)and they asked Riteway to pump and clean tank and they did tank test after the tank was pumped and cleaned. They installed temporary tanks and will isolate and retest. No spills noted in basement. Letter should go to:

3/27/13 AFrischeisen intern TTF letter sent.

4/02/13 AFrischeisen intern Telephone call with Rob Hill from Riteway for update. Rob said they will begin removal of existing tank in the middle of next week 4/ – 4/12, install new tank following removal, retest, etc.

11/24/15 TJD File review. Requested closure documentation from Riteway Tank on 11/9/15. The report is summarized below:

A tank test was performed on the above referenced property which failed on February 15, 2013. The NYSDEC was notified and spill# 1215632 was obtained. The tank was immediately evacuated, cleaned and temp tanks were installed. The existing 3,000 gallon AST

was removed (please see enclosed FDNY Affidavit). After the tank was removed, room debris was drummed up and the floor was leveled. 12 x 55 gallon drums (please see enclosed manifest) of debris were generated from the tank removal and the preparation of the floor for a new concrete pad. The room was clean and free from contamination. A new concrete pad was poured. A new 3,000 gallon AST was installed with new pipe work. Temporary tanks were pumped out, cleaned and removed. Based upon the above information – no further action is required. All received documentation has been uploaded to DECDOCS. Spill closed.

DEC Investigator Remarks:

1/23/07 sent ttf letter to: Michell Schamroth 176 West 87th Street Owners Corp. 176 West 87th Street New york, NY 10024

bf

3/5/07 Received tank test results for tank. Tank is AST in contact with soil. More info needed. Called Jack Terebelo of Halstead Management (212)508-7645 and left message that more information is needed. Also, tank may not be registered. Data base has 10K tank for #6 fuel at this location. PBS#2-214396. Tank test results state that it is a 5K tank for #2 fuel. bf

3/6/07 On 3/5/07 at 5:15 pm received message from Mr. Terebelo. (212)508-7391. Returned call and left message to call me back. bf

3/23/07 Received letter from Jack Terebelo of Halstead Management. Tank failed test on 1/16/07. Tank passed retest on 1/25/07. An opening was found at the top of the tank that was likely not plugged when the petrometer was changed in 2005. Expandable plug was inserted. He sent PTC numerous requests for a letter and they have not, so he is submitting the letter. Tank test results, invoice, and confirmation that the tank is 5K were enclosed. bf

2/28/08 Called Joe Ostrowski of Petroleum Tank Cleaners. Two old lines at manhole cover were never sealed. After they sealed them, the tank passed tightness test. Will talk to Mark Salamack tomorrow re: letter for DEC closure. bf

4/1/08 Sent fax to M. Salamack requesting response to ttf letter. bf

4/2/08 Received fax from M. Salamack of PTC. Gauge line was broken. Line repaired and tank passed test on 1/25/07. Passing test results attached. NFA. bf

3:35 PM:– sent TTF to Mr. Ginsberg, requiring report submission by the end of 07/31/14. letter emailed to Mr. Ginsberg and Rob.

08/25/14–Hiralkumar Patel. 4:23 PM:– sent email to Mr. Ginsberg inquiring about the report. email copied to Rob.

08/27/14–Hiralkumar Patel. 10:51 AM:– received call from Dave. currently, they are cleaning the tank and will remove it soon. he will send email with more update and schedule. 12:16 PM:– received email from Dave. they did an isolation test and found leak in

dry potion. they are scarping and washing the tank today. tank removal will begin tommorrow.

09/26/14–Hiralkumar Patel. 2:47 PM:– spoke with Dave. they removed the tank and slightly contaminated vault material. after removing the tank, the floor was found in good condition and no signs of spill noted underneath the tank. asked Dave to submit closure report.

11/03/14–Hiralkumar Patel. 11:04 AM:– spoke with Dave and asked him to submit closure report. 3:07 PM:– received email from Dave including closure letter. the letter included information about tank’s removal and condition of floor underneath the tank (which was found sound). no contamination was observed underneath the tank. the letter does not include information about investigation along the piping. as per the tank removal affidavit, the fill line was cemented. the vent, suction and return lines were cut and capped or disconnected and removed from the premises.

11/04/14–Hiralkumar Patel. 8:04 AM:– sent email to Dave and asked him to submit documents related to investigation along the piping. email copied to Rob and Mr. Ginsberg. 10:17 AM:– received email from Dave. he mentioned that during isolation test, a leak was found in elbow on fill line coming off the top of the tank. all the piping associated with the system was aboveground.

based on available information, case closed. 10:34 AM:– sent spill closure letter to Ms. Ginsberg. letter emailed to Mr. Ginsberg and Dave.

failed tank test

DEC Investigator Remarks:

10/09/12–Hiralkumar Patel. alternate addresses: 473–475 West End Ave, 300–308 W 83rd St PBS #: 2–266698. as per PBS record, the site has one 5,000 gal #6 oil AST in contact with soil. tank was installed on 02/04/1972.

no other spills found.

10:53 AM:– spoke with Mark at PTC. Mark mentioned that the site has one 5,000 gal AST in basement room. he doesn't know whether tank sitting on floor or on saddles. Chris was not in office. PTC was sub–contracted by Gee Cee Mechanical.

Vinny Col Gee Cee Mechanical Ph. (718) 258–9800 email: betternrg@aol.com

11:12 AM:– spoke with Vinny at Gee Cee. he mentioned that consulting firm hired them as part of boiler replacement project and asked for tank test. he asked to contact Earl Kirn, property manager.

11:15 AM:– spoke with Mr. Kirn. he mentioned that they are converting from #6 to #2 oil. they have cleaned out the tank and filled with #2 oil. Mr. Kirn mentioned that the tank was tested prior to filling with #2 oil. informed him that as tank system failed the test, the department required immediate action to stop any petroleum release from the system. asked him to either perform isolation test (and confirm that tank/supply/return lines are tight) or pump out the tank, by the end of tomorrow.

473 Owners Corp.

property owner c/o Midboro Management Inc.

management company 148 W 37th Street, 8th Floor New York, NY 10018 Attn.: Earl Kirn

property manager Ph. (212) 877–8500 Ext. 220 email: ekirn@midboro.com

11:20 AM:– left message for Vinny. 11:34 AM:– received call from Vinny. informed him about discussion with Mr. Kirn. 12:58 PM:– sent TTF letter to Mr. Kirn. asked him to submit report by 11/14/12. letter emailed to Mr. Kirn and Vinny.

10/16/12–Hiralkumar Patel. received message from Mark (at 12:22 PM on 10/15/12) from PTC. he mentioned that during isolation process, they found old tell–tale line connected to the tank. after disconnecting the tell–tale line, the remaining tank system passed the test. 10:09 AM:– spoke with Mark. asked him to submit result of tank system test. also asked him to investigate at the other end of the tell–tale line, as there might be contamination if tank overfilled in past. Mark mentioned that tank is wrapped in concrete. 10:14 AM:– spoke with Mr. Kirn. informed him about findings of tell–tale line and asked him to investigate at the other end of the tell–tale line. he will talk to contractor.

12/10/12–Hiralkumar Patel. 11:18 AM:– spoke with Mark. he mentioned that no further work is done. 11:24 AM:– spoke with Vinny.

he mentioned that due to storm, no work done on tank. currently, the building is using temporary boiler unit (with temporary day tank) as they are in process of replacing the boiler. 11:28 AM:– left message for Mr. Kirn.

01/07/13–Hiralkumar Patel. 11:36 AM:– left message for Mr. Kirn and asked to return call by the end of 01/09/13 to avoid enforcement.

01/08/13–Hiralkumar Patel. received fax from Mark from PTC including report. Mark mentioned that an old tell tale line was attached to the tank and terminated under the ground. old tell tale line was disconnected and the tank system tested tight.

10:54 AM:– left message for Mark. 10:56 AM:– received call from Mark. asked him about investigation at other end of tell tale line. he mentioned that no work has been done about that. 10:58 AM:– left message for Mr. Kirn and informed him that the department requires investigation at the other end of tell tale line. 12:31 PM:– received call from Mr. Kirn. discussed about investigation at the other end of tell tale line. he has spoke with engineer/contractor who are replacing boiler at the site and old tell tale line will be exposed in couple of days. asked him to submit results by the end of 01/18/13.

04/11/13–Hiralkumar Patel. 10:20 AM:– visited site. inspected tank room. site has aboveground tank wrapped in concrete. lines to and from tank are running aboveground except fill line that runs under the sidewalk. on–site person mentioned that a new set of fill/vent lines were installed after tank test failure in Oct. 2012. observed old fill/vent lines inside building. 10:39 AM:– left message for Mr. Kirn.

Kol

building super Ph. (646) 241–8010

3:17 PM:– spoke with Mark. he mentioned that proposal for tell–tale line investigation was sent to Gee Cee Mechanical but no response received yet. 3:20 PM:– spoke with John at Gee Cee Mechanical. he doesn't know anything and will ask Vinny to call back.

04/12/13–Hiralkumar Patel. 11:18 AM:– spoke with Kol, building super. he doesn't know anything about old tell–tale line. 11:20 AM:– spoke with Mr. Kirn. he mentioned that no investigation has done yet for any spill at other end of tell–tale line, which terminates in ground. asked him to provide work update by the end of 04/19/13.

06/24/13–Hirakumar Patel. 2:05 PM:– left message for Ms. Florence, new property manager.

Michele Florence Midboro Management Inc. Ph. (212) 877–8500 Ext. 206 Fax (212) 875–0808 email: mflorence@midboro.com

2:07 PM:– sent email to Ms. Florence and asked to call back. 2:35 PM:– received call from Ms. Florence. informed her that the department requires investigation at the other end of tell–tale line. she will contact contractor and will call back.

07/19/13–Hiralkumar Patel. 1:26 PM:– received email from Ms. Florence. she mentioned that building board has approved further investigation. they have sent deposit check to PTC and PTC will file permit application.

08/01/13–Hiralkumar Patel. 11:17 AM:– spoke with Mark at PTC. he got ok from management for further investigation. to continue work, they need NYC DOT permit and Mark is waiting for signed letter from management to include in permit application. 11:21 AM:– spoke with Ms. Florence. she will follow up with permit application requirements.

08/14/13–Hiralkumar Patel. 3:58 PM:– received email from Ms. Florence. they received permit and further investigation is scheduled for 08/21/13.

08/26/13–Hiralkumar Patel. 10:04 AM:– received message from Mark. 1:25 PM:– spoke with Mark. they exposed the old tale–tell line and found some contamination. they removed 4 drums of contamination. there is still some contamination in ground. asked Mark to take some pictures of excavation area and endpoint soil samples.

08/28/13–Hiralkumar Patel. 6:40 AM:– received email from Mark including three pics. he found coal dust and cinders while excavating near fill port. he inquired about excavation requirement. 1:31 PM:– left message for Mark. 2:46 PM:– received call from Mark. they found tale–tell line near fill port area. scheduled a site inspection at 9:30 AM tomorrow.

08/29/13–Hiralkumar Patel. 9:30 AM:– visited site. met Mark. inspected excavation around fill port, where tale–tell line ended. found end of tale–tell line sealed with cement. found backfill material in excavation, in top layer. no petroleum odors noted in backfill material or soil around fill port.

based on observations during the site visit, case closed. 12:56 PM:– spoke with Ms. Florence and informed her about case closure.

DEC Investigator Remarks:

10/17/14: Mahat A closure letter was sent out to the property owner (PBS #
). The PBS registration is expired on 2007. A letter including TTF and PBS Rgistration is sent out to the following address :

MICHAEL EDELSTEIN 307 WEST 79TH STREET

October 17, 2014 New York, NY 10024

Re: Spill Case: 1407368 307 West 79th Street, New York

DEC is waiting for a report from the property owner.

11/24/14: Mahat Fax: DEC Mahat received a fax from Mr. (Gry Greene @ Imperial Realty) including a closure request and TTF result. The leaking hole on the tank has been repaired and the tank passed the TT. Report has been uploaded on D2. Based on the report provided, the Department does not need any further investigation. Hence, the spill case will be closed in the database.

Caller Remarks:

5,000 gallon tank failed tank test, no spill of material. tank is empty

DEC Investigator Remarks:

4/13/15–Riteway emailed the spill closure report. The letter stated that In July of 2014, Riteway Maintenance Corp. was contacted by Abilene Inc.to perform a tank cleaning and tank test on 1 x 5,000 gallon tank for a conversion. After the cleaning of the tank, a tank tightness test was performed on the tank and failed.

The tank failed with a dry portion ullage leak. there was no contamination present. As part of the remedy to the tank test failure, the property re–placed the entire bottom of the tank, installed new steel saddles and the new 2 vent.

The tank is scheduled to be retested next week. Riteway will submit the test results to the NYSDEC as soon as it is completed.

5/27/15–Riteway emailed the passed results of the tank tightness test. Spill Closed.

Caller Remarks:

Caller advised older spill under 1 gal spilled onto concrete. Unknown contributing factor. Clean up is complete. Caller was advised by Jeff Vought to call in the spill.

DEC Investigator Remarks:

2/23/16–Vought–Received call from and spoke to Mark Rishe around time of spill. Rishe provided spill specifics and spill did not meet five Spills Notification requirements. Rishe however wanted DEC documentation that a spill report was not required and Vought noted that the only method of documenting was via the Spills Database and hence a Spill needed to be called in IF they wanted a written response. Vought received email dated 2/1/16 from:

Marc Rishe First Service Residential 622 Third Avenue 15th Floor New York, NY 10017 Email:marc.rishe@fsresidential.com Ph:(212)634–8927

Email noted Mr. Vought, thank you for speaking with me. As discussed, I reported a spill at the above location to the hotline. In October, there was a small amount of oil noticed on the concrete by the oil tank. A clean up firm (documents attached) was dispatched to clean and degrease the concrete where the oil was located. The oil was not near nor did it come into contact with any sewer drain on the premises. Please let me know if you have any further questions.

2/24/16–Vought–Added Riteway invoice and Approved Oil letter attached to email above to D2 in one document and reviewed:

Riteway Tank Maintenance Invoice – 10/30/15. Customer was Approved and invoice noted clean tank room of debris and wiped down tank/clean up old spill

Approved Oil Company (Eric Sutphen) letter to Mr. Robert Swiderski–11/9/15. Letter noted On October 29th, 2015, I retained the services of Riteway Tank Maintenance as per your request to inspect the tank room at 101 west 78th Street in New York City. The tank room was said to have less than a gallon of oil on the floor that accumulated from miscellaneous piping work previously completed and some debris that had to be removed as well. Riteway cleaned the room and properly and degreased the room as well to

ensure it was oil and odor-free.

Spill closed by Vought due to minimal spill on concrete and no impact to soil, groundwater, drains. Spill closure letter sent to Marc Rishe via email and via US Mail at address above. Vought also added closure letter to D2.

| #2 FUEL OIL | PETROLEUM | 3.00 | GALLONS | 0.00 | GALLONS | SOIL |

Caller Remarks:

about 3 g gallons of fuel was spilled into about 20 gallons of water. took samples pcb,id,and flashpoint.clean up pending test results con ed reference# – 153134

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 153134:

Approx. 3 gal. of fuel oil and 20 gals of water in sb 14414. Source and cause of spill is unknown. Liquid Samples will be taken for pcb, id, and flash point from the spill.

Lab Sequence Number: 04-03262-001: TOTAL PCB 2 ppm

Lab Sequence Number: 04-03263-001: Analysis indicates the presence of a substance similar to a light fuel oil.

4/29/04 21:28 Received a change in lab results, Notice of Change of Sample Matrix for PCB: Sample ID 04-03262-00, Lab Sequence Number: 04-03262-001: TOTAL PCB: 2 ppm NOTE: The chain-of-custody indicated the sample matrix as a LIQUID. Analysis determined the presence of oil in the sample and the sample was analyzed as an OIL.

Update- R.Saladino,620, @ 0700hrs. Flash Point result > 140 Deg F. Reported on LSN- 04-03262-002.

UPDATE: 04/30/ Pete Mulholland #18565 ogs reported that cleanup was completed at 13:00 hrs. Source of spill: Unknown, double washed with slix, removed one gal of oil, 150 gal of water with tank truck, removed tag #28761, removed 3 bag of ppe & debris from service box.

NIGHT TIME 212-580-6065

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 2/27/04. J.Krimgold at site. Met with Charlie from Ambassador Fuel. They provide maintenance and oil delivery for 33 West 76 street (adjacent property). No petrol. odor was found in the basement or ground floor. However, as a precautionary measure Ambassador Fuel will replace vent line which close proximity to the adjacent building may cause odor during delivery.

3/4/04. J.Krimgold spoke to George (Ambassador Fuel) 718-585-6200. He stated that a vent line was replaced and relocated further away from adjacent building and a fill line was dug out and replaced with a new one. No contamination was found during excavation. NFA.

THEY WERE DIGGING AND FOUND WATER WITH OIL APPEARS OLD SPILL.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 01/29/01

Brownstone: basement 19 by 55 feet.

broke through concrete for new elevator shaft and encountered oil/water. Went back, no oil. They will do borings around the hole to delineate oil/water. No evidence of tank. Building gas powered. May underpin entire basement and lower floor a few feet. He will hire contractor who will keep me apprised of situation.

01/26/04

Transferred from Rommelto Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. To Albany

9/7/06 – Austin – Assigned from Albany to Region 2 staff (Rahman) for review and closure – end

03/31/09 No documents available in edocs. Unsure if borings were done. Letter was sent to

Wayne C Wilkey 144 West 82nd Street New York, NY 10024(sr)

04/08/09 Rec'd letter response from Wayne Wilkey. There was no tank on that property when the spill was called in. Petroleum odor was discovered from a pit excavated for an elevator. Athenica submitted soil samples for testing. Concentrations were below RSCO. Soil with petroleum odor was disposed by 'Industrial Waste Technologies'. As per the letter, the smell of petroleum odor could be coming from residual oil left after an old heating oil tank had been removed. Case closed. (sr)

oil found in an excavation for telecommunications duct installation. 3rd party spill. clean up pending. con ed 136-902

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis #136902:

5/07/01 11:55 hrs. James Delia, Inspector for Construction Mgmt., reported at 10:41 hrs. that Kevin McCormack of RCI (a Contractor) found at 10:25 hrs. approx. 8 gallons of an unknown oil and no water in an excavation located on Central Park West

306 ft. south of the south corner of West 81 Street, 1 ft. east of the west corner of Central Park West. The contractor was installing telecommunication ducts when he discovered the oil.

NOTE: James Delia will be used as the Finder since the contractor's name is not in our database. Contractor believes that the unknown oil is possibly fuel oil. The source and cause of the spill is unknown. No samples taken. No cleanup action except all work was stopped. The Environmental Desk (E.D.) was asked to call the Chem Lab to take samples. The E.D. requested that samples be taken for PCB and Oil Id.

UPDATE @ 17:03 hrs. Environmental Desk (E.D.) made arrangements for Chemist to take samples tomorrow, 5/08/01 at 07:00 hrs.. Samples to be taken for PCB, Oil ID and Flash Point. E.D. made recommendation to Construction Mgmt. personnel to have excavation barricaded and made safe to prevent unauthorized access. It was made clear to James Delia that no one should be allowed access to this excavation until the results of the lab analysis reports have been received.

05/06/03 8:45hrs – As per James Delia on 05/02/03, the clean up was complete in about two weeks from the date of test results and 4 drums of non haz oily soil was transported by Astoria transportation for disposal. This incident is being closed – updated by Bharat Mukhi, M&C – EHS.

CALLER REPORTS A CALL COMING INTO TO HAZMAT BY MATTHEW DECLERCQ AT 212-496-9607 COMPLAININ OF A STRONG OIL SMELL IN THE AREA OF HIS RESIDENCE, POSSIBLY COMING FROM HIS NEIGHBOR AT THIS LOCATION:

DEC Investigator Remarks:

10/4/06-Vought-Off hours responder. Performed site visit with DEC Zhune due to vapor complaint. Vought called Mathew de Clercq who stated that he lived at 50 West 48th Street and he was smelling strong petroleum vapors from the next door residence that was currently vacant and that had a prior oil spill (see closed spill #0650371). When Vought and Zhune arrived on site, resident of basement of 50 West 48th Street stated that he had not smelled any petroleum fumes in since previous winter. Inspection of basement of 50 West 84th Street was performed and no USTs, old fills, oil stains, vapors were noted. 50 West 84th Street currently using natural gas for heating. Vought and Zhune also interviewed residents at 46 West 48th Street (Douglas King) and they had also not detected petroleum odors. Ling and King were provided with DEC information in case they detected odors in the future. Douglas King provided contact information for owner of 48 West 84th Street:

Suzanne R Holmes 790 Riverside Drive #10E New York, NY 10032 Phone:(212)368-8880

Zhune and Vought inspected 48 West 84 via a small hole in basement window. Petroleum odors were noted emanating from the basement. A portion of a suspected 275-gallon #2 fuel oil AST was visible and had some oil staining. A portion of the poured concrete floor was also visible with no signs of spillage.

10/5/06-Vought-Received call from Bob Ling and realtors contact info for 48West84th Street is John Bowe(646-613-2711) and Stan Ponte(646-613-2756). Vought called Holmes to require visit and send soil contamination letter. Vought called back Suzanne Holmes and informed her of odor complaint and she stated that you are full of shit and hung up on me. Vought called her back and left message that if call back was not received in 10 minutes case would be referred to ECO's for enforcement. Vought referred case to ECO's for enforcement. Note following violations: Navigation Law: Article 12 Section 173-Prohibition of discharge, Article 12 Section 176-Removal of prohibited discharge. Vought called Schildwalker (spiller for spill #0650371 Schildwalker-800.642.3546) and number is wrong number. Vought called Mathew deClercq and left message updating him with information. Vought set up appointment with ECO Loriso for 10/10 at 9am at 48 W84th Street. Vought received call from Ling and updated him on site.

10/11/06-Vought. Site visit by Vought with ECO Lorioso to both site and owner's address. Visit to site to confirm presence of odors from basement with ECO. After confirmation of odors, site visit was performed with ECO to residence Suzanne Homes. Holmes

immediately agreed to site access and set up appointment with super (Orlando 917-886-4788). Vought handed her copy of soil contamination letter. Site visit showed stained concrete and some stained debris (dust and dirt on concrete) around two (275-gallon) #2 fuel oil UST and some oil on USTs. Poured concrete floor and no pathways to subsurface. DEC required: 1)closing of basement window 2)Sweeping of oil contaminated dust 3)painting of floor. Vought spoke with Orlando and Holmes regarding requirements and Holmes agreed to send in letter stating such. Vought called Mathew DeClercq and updated him on information and DeClercq informed Vought that window was sealed.

11/17/06-Vought-Received message from Holmes and Orlando that DEC requirements of 1)closing of basement window 2)Sweeping of oil contaminated dust 3)painting of floor were performed. Spill closed by Vought.

Caller Remarks:

SPILL IN BUILDING. NO CALL BACK NEEDED. FD ON SCENE.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO/DEMEO 7/16/2002 - 21:20: Zhao and Demeo responded on

scene off hours. A 5,000 gallon #6 fuel oil AST vaulted in basement. The tank was overfilled, and also leaked from a patch on upper tank. NYC Fire HazMat on scene stopped the leak. There were about 40 gallons oil spilled out in the tank vault from the leaked patch some of them contained in buckets, About 20 gallons oil was found in the building backyard vent pipe area, A puddle in drain in front of the basement door, a couple of spill evidences found on walls along the fillline. – Site superintendent Jesus stated to the DEC representatives and Hess Oil Corp representative that he ordered the 2,500 gallons oil and he was in control of transfer as he was present and pumped the petrometer. – A. L. Eastmont was contracted for removal all tank oil by building representative (we were told that super called contractor). Eastmont went there around 12:00am with a 5,000 gal tanker truck. The pumped oil was let to send back to Hess to be reused. There were about 4,500 gal oil removed from tank.

7/17/2002 – A L Eastmond pumped out the remained oil in the tank.

7/18/2002 and 7/19/2002 – A L Eastmond continues working to remove the pooled product. Ms Zhao has informed the Eastmond site manager Rene Lewis (also Stellar Management)to clean up the spills immediately in the rear of the building the vent area, which has not been done yet. By 3:30pm, information received by a follow-up call to Eastmond manager, A L Eastmont has checked the backyard spill and will clean up ASAP. They will continue to cleaning and testing tank next Monday from their schedual.

7/19/2002 – Work-to-do letter has been sent accompany with PBS NOV to Stellar Management by fax and certified mail.

7/23/02 – A L Eastmond will continue work starting tomorrow for this week. Backyard spill still need to be cleaned up. The DEC will follow up next week.

8/5/2002 – Tank tightness test failed.

8/26/2002 – Tank has been removed last week by New York Combustion. A L Eastmond continued to dig contaminant soil last Friday.

Caller Remarks:

SOIL TESTING SHOWED FULE IN SEVERAL LOCATIONS:

DEC Investigator Remarks:

Sangesland spoke to Steve Malinowski at CA Rich. The property is being sold and he works for the current owner. A phase 1 was done by someone else and identified possible petroleum tanks on site. Steve was hired to do a phase 2 which he started. They did find contaminated soil and hit what he assumes is a buried tank. The property is being sold and will be torn down for redevelopment in the spring (2007). They would like to hold off doing any major remedial work on the site until that time.

CSL sent to current owner: Marc Ravner EZ Group 1220 Broadway – suite 408 NY NY 10001

1/25/07–Vought–Received call and spoke to Malinowski and building will not be torn down but will be rehabilitated in place and foundation will stay in place. Building is four story garage with plans for garage on bottom and top four floors will be gutted and rehabed. Basement is parking garage and some vents present. Geoprobe borings were performed (seven borings) and three appeared contaminated with odors from 3.5–8' with highest PID of 1275ppb. No groundwater encountered in borings. Samples currently being analyzed and further delineation will be performed to decide on remedial action (most likely excavation). Geoprobe performed through tank showed no indications of product other than one inch of sludge. Four vent pipes present and GPR survey performed and pipes connected to tank area. Possibly additional tanks. Second floor. Vought requested site visit for vapor inspection in addition to approval of further delineation.

04/12/07–Vought–Received call from Stephen Malinowski to discuss site. Heavy soil contamination noted under garage floor. Site will be sold once spill closed and site may be developed for residential. No groundwater samples collected to date. RAP will contain contingency to install SSDS if endpoint samples are contaminated. Gym to the right and retail to left. Decision on street well location pending submission of soil endpoint samples and site visit. Malinowski will send in proposed RAP for excavation.

DEC requires: 1)collection of groundwater sample 2)vapor barrier/possible SSDS 3)site visit to inspect excavation before backfill 4)collection of soil endpoints 5)surrounding area site plan.

05/14/07–Vought–File update by Vought.

Phase II Environmental Investigation Report (CA Rich–Stephen Malinowski) dated 3/20/07 and received on 3/22/07. Phase I showed four vent pipes in roof of building, evidence of floor restoration of concrete floor in garage, presence of three abandoned fill

ports with concrete, presence of former dispenser islands and piping. Five soil borings performed on 1/24/07. Report recommends excavation and removal of at least one confirmed UST, excavation of all impacted subsurface soils along with preparation of Health and Safety Plan (HASP). HASP will include provisions for air monitoring and ventilation during removal of USTs. Soil analyticals show: 3900ppb benzene(B1 3.5–4'bg), 4900ppb toluene(B1 3.5–4'bg), 10000ppb ethylbenzene(B1 3.5–4'bg), 32000ppb xylene(B1 3.5–4'bg), (note that B1 9–10'bg was below TAGM 4046 for VOCs and SVOCs), 2800ppb benzene(B2 5–6'bg), 28000ppb toluene(B2 5–6'bg), 130000ppb ethylbenzene(B2 5–6'bg), 770000ppb xylene(B2 5–6'bg), 8000ppb xylene(B2 9–10'bg), 4500ppb 1,3,5-trimethylbenzene(B2 9–10'bg), 13000ppb 1,2,4-trimethylbenzene(B2 9–10'bg), 11000ppb benzene(B5 4.5–5.5'bg), 50000ppb toluene(B5 4.5–5.5'bg), 72000ppb ethylbenzene(B5 4.5–5.5'bg), 280000ppb xylene(B5 4.5–5.5'bg).

Email from CA Malinowski to DEC Vought–4/13/07/ I just wanted to let you know that we checked the NYC website and confirmed that the above–referenced site is not identified with an E–designation .

Remedial Workplan (CA Malinowski) dated 4/19/07 and received on 4/25/07. An approximate 400 square foot area surrounding tank location will be saw cut and excavated. Soils will be segregated and contaminated soil will be disposed of. Excavator has a reach of 8.5 feet and if contamination extends beyond this depth, ramp will be built for excavator to enter excavation. Contaminated soil excavation and removal will continue until all of the impacted soil has been removed, until contamination exceeds the depth capabilities of the equipment, or proximity to load bearing structures (building walls, etc.) precludes further safe excavation. Proposal also includes collection of endpoint samples (five samples). If all contamination cannot be removed then piping for sub–slab venting system into excavation. As per our recent conversation, we understand that based on the extent of the soil contamination observed during the remediation NYSDEC may require the collection of groundwater quality samples. If required the work will be performed as a separate follow–up task to the proposed cleanup activities detailed in this Work Plan .

Email from CA Malinowski to DEC Vought–5/9/07. Please acknowledge that it is okay to proceed with the scope of work .

Email from CA Malinowski to DEC Sangesland–5/9/07/ Request to contact Vought for approval.

5/14/07–Vought–Called CA Malinowski (cell 631–974–5755) and he is onsite and work is beginning today. Vought discussed below requirements and sent letter to above address as per Malinowski.

DEC requires: 1)investigation of remote fill ports and piping 2)PBS registration 3)collection of groundwater samples 4)collection of endpoint samples from limits of excavation as per DER–10 frequency 5)submission of plans for SSDS to DEC if necessary.

Vought sent residential construction soil contamination letter with above requirements and one month due date.

05/16/07–Vought–Received call from Malinowski that UST pull scheduled for 5/18 and DEC site visit requested. Malinowski also submitting letter with more description of SSDS. Vought called Malinowski and requested that DEC site visit be performed upon reaching terminus of excavation. Vought called Malinowski and he will send in plans for SSDS and call DEC Vought upon reaching excavation limits.

05/17/07–Vought–Received plans for SSDS from Malinowski including installation of 4 perforated PVC pipe in 3/4 inch stone, .6 mil vapor barrier under concrete slab. Site plan shows SSDS to be installed around perimeter of UST pad but notes that The actual size of the SSDS to be installed will be directly based upon the extent of the excavation . Vought approves scope of SSDS system however no formal approval issue given as extent of SSDS system not known. <-----

05/22/07–Vought–Received message from CA Rich Malinowski that owners will be onsite today however endpoint samples are not be ready to be collected as further excavation is planned. Vought called and left message for Malinowski to return call to Vought with endpoint sampling date so that a site visit may be scheduled. Vought spoke to CA Malinowski and tanks have been removed and sewer line in east side of excavation but has clean soil. Western most tank had holes and continuing excavation to west. Groundwater in hole previously due to broken sewer pipe. Excavation will continue to the west and the tanks will be removed. Possible fourth tank located (four vents and only three tanks found).

05/24/07–Vought–Site visit by Vought with Malinowski. During excavation activities, a backhoe ran over a can of primer that released vapors into building. Building was ventilated. Supply/return lines for fourth tank were followed approximately 40' to rear of building and UST not found as of yet. UST may be located behind wall in unexplained room (or brick enclosure that has no doors, connecting pipes or indication of tanks). Groundwater present in excavation. DEC required installation of wells to groundwater in excavation and Malinowski will install two groundwater monitoring points (for treatment and/or monitoring). Malinowski also installing four vertical extraction wells and groundwater at depth of 6' below grade. No official plans for property as of yet. Visibly contaminated soil under floor and DEC suggested additional excavation to structural limits. Four endpoint soil samples will also be collected. Remote fill and fourth tank will be investigated using Geoprobe. Pilot test for extraction system will also be run and vapor barrier will be installed in excavation. RAP will be submitted including soil endpoint samples and SSDS by 7/14/07.

8/3/07 – Austin – Transferred from Vought to Patel for further review and action – end

Stephen Malinowski CA Rich Consultants, Inc. Ph. (516) 576–8844 (O)

(631) 974–5755 (C) FAX (516) 576–0093 email: smalinowski@carichinc.com

08/16/07–Hiralkumar Patel. received tank closure report. abstract:

– removed three USTs enclosed in concrete – found contaminated soil under western tank and under fill line for eastern tank – approx. 6 ft bg, water began entering the excavation – installed four 2–inch dia pieces of 20–slot PVC in the perimeter of the western side of the excavation and an additional point beneath the former leaking fuel fill lines – vapor barrier was placed over the entire excavation – endpoint soil samples were collected from the southern, northern and eastern sides of excavation – no endpoint sample collected from western side as that area still contaminated <----- – no further excavation possible – water sample was collected from one of the two–inch dia slotted pipes installed in the western side of the excavation <----- – removed 1,675 gal of contaminated water and 47.28 tons of impacted soil – recommends further soil and groundwater delineation – heavy contamination in sample from north, south and pipe trench area

soil analytical data: -----north-----south-----pipe trench
 Benzene-----1,700-----1,400-----4,000 Toluene-----14,000-----55,000-----50,000
 Ethylbenzene-----9,700-----110,000-----68,000 Xylene-----52,000-----900,000-----372,000
 1,2,4–Trimethylbenzene-----32,000-----550,000-----220,000 1,3,5–Trimethylbenzene-----9,900-----200,000-----76,000
 Naphthalene-----53,000-----21,000

groundwater analytical data: -----GW-1 Benzene-----2,500 Toluene-----4,700
 Ethylbenzene-----1,100 Xylene-----6,200 1,2,4–Trimethylbenzene-----1,600

1,3,5-Trimethylbenzene-----560 MTBE-----180 Naphthalene-----320

recommendations:

– installation of soil borings and soil sample collection in north, south and west areas to delineate the extent of residual contamination – proposed borings should be installed to a final depth of approx. 10–12 ft below the surface (not acceptable, need boring to depth of clean soil or termination) – installation of two soil borings in the extreme southern end of the basement – installation of one well beneath the sidewalk immediately north of the building along West 83rd street adjacent to the former remote fuel fill ports

spoke with Mr. Malinowski. they have installed well on sidewalk along West 83rd Street and will take sample next week. took some soil samples also. will submit delineation report by end of month. the well, installed on sidewalk, is on north side of tank area. based on endpoint analyticals, found heaviest contamination on south side. asked Mr. Malinowski to define site specific groundwater flow direction. Mr. Malinowski mentioned that there is one well in middle of excavation and they have installed one on sidewalk. due to space restriction, they can't install anymore wells inside building. asked Mr. Malinowski to install third well on same sidewalk to define groundwater flow direction. sent email to Mr. Malinowski with same requirement.

08/22/07–Hiralkumar Patel. received email from Mr. Malinowski. as drilling equipment was removed from site, they are not able to install third well now and to include site specific groundwater flow direction in next report. Mr. Malinowski will send supplemental delineation report by end of month. spoke with Mr. Malinowski. he is preparing report. regarding third well, he mentioned that potential purchaser is doing geotechnical investigation and will install four borings which could be used as well. he is in contact with another consultant and will use their boring points to find groundwater flow direction.

09/05/07–Hiralkumar Patel. received call from Mr. Malinowski. he mentioned that potential buyer will not do any investigation at site. Mr. Malinowski is going to install two micro wells (one on eastern boundary, more towards southern end of excavation boundary, and one on western boundary) inside basement. he will survey these wells to define groundwater flow direction and will send investigation report with proposed remedial action plan. investigation report will also include soil delineation data as they did about 14 borings inside basement to define area of soil contamination.

10/11/07–Hiralkumar Patel. left message for Mr. Malinowski. 10/12/07–Hiralkumar Patel. received investigation report from Mr. Malinowski. abstract:

– installed 14 soil borings through the basement floor – install one well on sidewalk adjacent to former fill port – install two wells inside basement – at each boring locations, soil samples were continuously collected until shallow groundwater was reached at approx. 6–7 ft below the basement floor – groundwater, in monitoring well installed on sidewalk, was encountered at approx. 15.5 ft below street grade – three soil samples were collected during well installation on sidewalk (no contamination found) – well on sidewalk was installed to depth of 25 ft bg – no floating product found in monitoring well on sidewalk – no floating product was observed in any well inside basement but a petroleum odor was noted in well MCW-1 – groundwater flow direction at the site is west–northwest

summary:

– no contamination found at former fill port – contamination doesn't not exceeds more than 10–20 ft from previous excavation limit on south side – contamination along western edge is limited to immediate vicinity of the sidewall of former excavation –

found contaminated area at the southern edge of property, around suspected UST area – constituents commonly associated with gasoline was detected in upgradient well MCW-1 to the south-southeast of the former excavation area

soil analyticals values: -----S1-B1-----S1-B5-----S1-B8-----S1-B13-----limit

| | 4-6 ft | 4-7 ft | 4-7 ft | 2-4 ft | |
|------------------------|---------|---------|--------|---------|--------|
| Benzene | 1,400 | | | 740 | 60 |
| Toluene | 28,000 | | | 24,000 | 1,500 |
| Ethylbenzene | 42,000 | 8,400 | | 37,000 | 5,500 |
| Xylene | 1,600 | 168,000 | 1,800 | 147,000 | 1,200 |
| 1,2,4-Trimethylbenzene | 110,000 | | | 100,000 | 10,000 |
| 1,3,5-Trimethylbenzene | 5,900 | 48,000 | | 43,000 | 3,300 |
| Naphthalene | 20,000 | | | 18,000 | 13,000 |

– only contamination found in groundwater was Naphthalene (240 ppb) in upgradient well MCW-1. – no contamination found in groundwater sample from previous groundwater sampling point which was inside previous excavation area

10/15/07–Hiralkumar Patel. sent email to Steve requiring submission of RAP. received call from Steve. he has submitted report to current owner and currently owner and potential buyer is reviewing this report. Steve is not sure when property closing will happen, if happen. and remediation will be depend on type of future use of this property. he will talk to his client regarding time duration for closing of the property. informed Steve that if closing doesn't happen in a month, then owner has to start remediation to prevent further damage. got property owner's information:

Marc Ravner MARGLO, LLC. 1220 Broadway, Suite 408 New York, New York 10001 Ph. (917) 743-1553 email: marc@ravner.com

10/31/07–Hiralkumar Patel. sent email to Mr. Ravner requiring RAP submission. 11/26/07–Hiralkumar Patel. spoke with STEve at CA Rich. he mentioned that site will be used as garage as buyer is not instrested in property. Steve is going to site this week to track fourth tank for abandoned line in ground, and if finds tank then based on tank location, Steve will submit a RAP (most probably by Dec. 7, 2007).

11/28/07–Hiralkumar Patel. received email from Steve. he is going to site on 11/30/07.

01/02/08–Hiralkumar Patel. received project update from Steve. they did not find any tank for pipe that runs from former tank excavation towards and below rear wall near the southern edge of the site.

01/14/08–Hiralkumar Patel. received message from Ivy Olberding (631-589-6353, IvyO@pwgrosser.com) from PW Grosser. they been contacted by owner for further work. Ivy will call once they get hired.

01/30/08–Hiralkumar Patel. spoke with Ivy at PW Grosser. they been hired by owner. Ivy will submit RAP.

02/05/08–Hiralkumar Patel. received call from Ivy. they are planning for further excavation. Ivy will submit work plan.

02/12/08–Hiralkumar Patel. received email from Eric. spoke with Eric. he has been contacted by property owner regarding remediation at site. Eric asked what needs to be done to close the case. explained Eric that the department is waiting for RAP

from owner. Eric will submit RAP, if get hired.

Eric Telemaque, President EMTEQUE Corporation New York, NY 10018 Ph. (212) 631-9000 Fax (212) 631-8066 email: eric@emteque.com

spoke with Mr. Ravner. he has hired PW Grosser. asked him to submit RAP by Feb. 22, 2008.

03/14/08-Hiralkumar Patel. spoke with Mr. Ravner. PW Grosser has prepared RAP and will submit by March 18, 2008.

03/20/08-Hiralkumar Patel. received work plan from Ivy from PW Grosser. abstract:

- proposed additional subsurface investigation will be performed to excavate the identified contaminated soil - soil and groundwater endpoint samples will be collected - ORC treatment will be used as expecting groundwater at bottom of excavation - will sample existing wells (MCW-1 and MCW-2) approx. one month after excavation and application of ORC

Ivy Hidalgo-Olberding P.W. Grosser Consulting Ph. (631) 589-6353 (O)

(516) 424-1984 (C) email: ivyo@pwgrosser.com

Ivy proposed to take endpoint samples from three sidewalls only and groundwater sample from bottom of excavation where tanks were. there will be no samples taken from eastern sidewall as no contamination found in eastern endpoint sidewall sample after tank removal work.

sent email to Ivy approving proposed plan with only change that endpoint soil samples must be taken from all sidewalls. also mentioned that the department may require further soil/groundwater delineation/remediation based on result of remedial activities.

03/27/08-Hiralkumar Patel. received message from Ivy. will start excavation on 03/31/08. 04/10/08-Hiralkumar Patel. received call from Ivy. they are excavating area. Ivy found that previous tank location area excavation was backfilled with clean soil and there is now two feet thick concrete. Ivy asked if they need to remove that concrete. told Ivy that during tank removal, previous contractor removed soil to the depth of water table and backfilled with clean soil so no meaning of removing that thick concrete and clean soil. mentioned to her that if any groundwater is contaminated under previous tank location, they can be treated with other wells in area. asked Ivy to collect endpoint soil and groundwater samples and submit sample analyticals with site map. told her that sample analyticals must be submitted prior to any backfilling, so if needed wells could be installed inside excavation alongwith vapor barrier and possible SSDS. Ivy will screen top soil and will use clean soil from excavation to backfill it.

04/18/08-Hiralkumar Patel. received call from Ivy. they took samples for waste characterization and asked whether need TAGM or STARS. asked Ivy to run samples for full list. Ivy mentioned that they dug most of area and found contamination below water table. they can't dig any more. asked Ivy to collect endpoint soil and groundwater samples and asked to keep excavation open, if possible, until receive and review the endpoint analyticals. based on endpoint analyticals, will submit RAP.

04/23/08-Hiralkumar Patel. received call from Ivy. she got verbal information from lab. found some contamination in north and west sidewall samples. no further excavation is possible in these areas due to foundation wall and electric vault. excavation done to depth of groundwater. as no further excavation possible, they area injecting ORC in soil. asked Ivy to submit sample analyticals for review, once available, before any backfilling.

04/24/08–Hiralkumar Patel. received site map with sampling locations and endpoint sample analyticals. collected one sidewall samples from East, South and North side of excavation and two sidewall samples from West side of excavation. northern most section of the East Wall could not be sampled because it was excavated to the brick wall; therefore no soil to sample. found contamination in samples from northwest corner (where stairs and auto elevator located).

| | | | | | |
|------------------------|--------|--------|------------------------|--------|--------|
| | NW-1 | WW-1 | Ethylbenzene | 10,100 | 8,860 |
| Xylene | 12,960 | 11,450 | 1,2,4-Trimethylbenzene | 9,970* | 9,370* |
| 1,3,5-Trimethylbenzene | 4,590 | 4,380 | Naphthalene | 6,190* | 3,980* |

* compounds found under TAGM limit

Regenox, was applied immediately after a second round of VEFR of groundwater in the open excavation.

spoke with Ivy. she mentioned that due to surrounding utilities and buidling structure foundation, no further excavation is possible. they have took groundwater sample from excavation and waiting for results. they also excavated area in southern end, as proposed in plan and took samples. waiting for endpoint sample analyticals from southern excavation. Ivy mentioned that currently there are two wells available inside basement, which were installed during earlier study and one well outside on sidewalk along W 83rd street. due to sidewall contamination in northwest corner, they will install one more temporary well in northwest corner. as no further excavation possible, regenox has applied and as consultant will install temporary well in contaminated zone, approved Ivy's request to backfill excavation, to prevent any accident. asked her not to put concrete slab until the department reviews groundwater analyticals and endpoint soil analyticals for samples from southern excavation.

04/30/08–Hiralkumar Patel. received sample analytical for endpoint soil and groundwater samples taken from southern excavation and groundwater analyticals for sample from northern excavation. no contamination found in endpoint soil samples from southern excavation. minor contamination found in groundwater sample from southern excavation. found some contamination in groundwater sample from northern excavation (area of previous tank location).

| | | | |
|------------------------|--------------------|-------------|-------|
| | N. Excavation GW-1 | Xylene | 1,394 |
| 1,3,5-Trimethylbenzene | 426 | Naphthalene | 196 |

as per Ivy, groundwater sample from north excavation was taken at same location where previous water sample taken after tanks removed. compared to earlier analyticals, found low contamination in recent groundwater sample.

sent email to Ivy approving backfilling of each excavations, as no further excavation possible. asked Ivy to submit RAP, based on endpoint sample analyticals, to address remaining contamination. asked Ivy to hold any concrete floor work inside basement until gets approval for RAP (as requires vapor barrier and possibly SSDS).

received message from Ivy. spoke with Ivy. they will use ORC and will collect groundwater samples, from all existing well and one temporary well that they will install in northwest corner, after a month. and based on that analyticals, may requires further work.

Ivy mentioned that there is thick layer of clay which is holding contamination in sidewalls. asked Ivy to include this information in report and as soil has high contamination, even with clean groundwater sample after a month, the department may

requires monitoring of groundwater for a year and have quaterly samples collected.

05/01/08–Hiralkumar Patel. received message from Ivy.

05/05/08–Hiralkumar Patel. spoke with Ivy. she inquired about what guidelines should be used in reference to backfill material. asked Ivy to use TAGM. Ivy also asked whether crushed stone be used as backfill near footings. Ivy sampled some backfill soil and found five SVOC compounds over TAGM limit (highest was 3600 ppb). Ivy asked whether this soil can be used as backfill (as no VOCs, PCBs, Pesticides found).

discussed with DEC Austin regarding use of crushed stone for backfilling. Austin asked to consult with NYC DOB as they regulates backfilling at any site. Austin also mentioned that as only SVOCs found slightly over limit and as SVOCs generally stick with soil, he approved to use such soil, but again after consulting with NYC DOB (in reference to type of soil).

06/06/08–Hiralkumar Patel. received message from Mr. Sharma from UTB.

Mohan Sharma UTB PH. (516) 326–1160 Ext. 106 email: msharma@utb1.com

spoke with Mr. Sharma. he asked to close the case based on decrease in groundwater contamination from starting of this case. explained to Mr. Sharma that there is still some contamination left in sidewalls and PW Grosser is using ORC to treat that contamination. to know effectiveness of ORC and to confirm containment of contamination in soil itself and not impacting groundwater anymore, the department requires groundwater monitoring. asked Mr. Sharma to submit report for work done till date.

06/26/08–Hiralkumar Patel. received remedial action report. abstract:

– neither the current manager nor the owners have stored or dispensed petroleum products at the site – surficial geological materials at the site consist of approx. one ft of backfill below a concrete slab. a native clay layer was encountered below the backfill and was overlying silty sands – the water table was encountered within the silty sands – performed excavation in two different areas: northern excavation and southern excavation – the northern excavation was approx. 60 ft in length by 40 ft in width and the southern excavation was approx. 20 ft in diameter – the northern excavation includes the areas adjacent to the former USTs – both the northern and southern excavations were excavated to groundwater which was encountered between the depths of 5–7 ft below the concrete slab of basement floor – the northernmost portion of northern excavation was approx. 9–10 ft bg – removed approx. 8,086 gal of free product/water during removal of impacted soils – applied Regenox – in order to determine the effectiveness of chemical application, collected four rounds of groundwater samples – one partially exposed fill line was observed along the length of the western wall during excavation activities – three temporary monitoring wells (TW–1 and TW–2 in northern excavation and TW–3 in southern excavation) were installed, which will supplement the already existing three monitoring wells (MW–1, MCW–1 and MCW–2) – monitoring wells were strategically installed in the groundwater flow direction at the site (west–northwest) <----- – temporary wells were installed to depth of 7 ft bg; wells consisted of 6 ft of screen and 2 ft riser which allowed for the screened zone to be approx. 3 ft into water table <---- – groundwater sample was collected from within the excavation pits after visible contaminated soil removed and before application of Regenox – first round of groundwater samples collected two weeks after application of Regenox; no floating product observed in any well – based on analytical result of first round of groundwater sampling, TW–1 and TW–2 were sampled on weekly basis to monitor degradation of residual contamination – found contamination in endpoint samples from northwest corner NW–1 and WW–1 (analyticals listed above) – NW–1: north wall of the northern excavation was excavated to average of approx. 2 ft from the building's outer brick wall; north wall could not be excavated further due to exposed bedrock at the western portion of the wall and a water main at the

eastern portion of the wall; excavation in this location was to the water table with the exception of the northernmost section which was excavated below the water table to approx. 9–10 ft bg; small area (approx. 20 linear ft) of soil remains on the north wall and was the location of the soil collected for sampling – WW–1: soil remaining in the north portion of western sidewall in northern excavation could not be further excavated due to the electric panel and two structural columns

summary:

– found high VOC contamination in soil endpoint samples from northern and northwestern sidewall in northern excavation (previous tank location area) – sidewall from northern section of excavation was taken from soil left adjacent to brick wall (due to structural stability reasons) – monitoring well MW–1 is located downgradient from the northern sidewall sampling location and during well installation, no soil contamination found. no groundwater contamination found from MW–1 – well MCW–2 is located in area of northwestern sidewall sampling location (where contamination found), but no contamination found in recent groundwater sample from MCW–2 – no downgradient well from northwestern sidewall, where contamination found in sidewall samples

discussed with DEC Vought. he mentioned that to confirm natural attenuation of contamination, groundwater must be monitored for pH, temp., dissolved oxygen and RedOx potential.

07/11/08–Hiralkumar Patel. spoke with Mr. Sharma at UTB. asked him to sample all wells again for VOCs and SVOCs along with following parameters: pH, temperature, dissolved oxygen and RedOx potential. sent email to Mr. Sharma, Ivy (at PW Grosser) and Mr. Ravner (owner) requiring the same.

07/28/08–Hiralkumar Patel. received closure letter from Ivy. they sampled monitoring wells MW–1, MCW–1, TW–1 and TW–2. wells MCW–2 and TW–3 were destroyed during backfilling. no contamination found in sample analyzed. dissolved oxygen was found more than 3 mg/l in each wells and RedOx potential was more than zero.

07/30/08–Hiralkumar Patel. discussed with DEC Vought. as no further excavation possible in any area and no groundwater contamination found in wells during recent sampling and based on DO, pH and RedOx potential values, Vought suggest to close the case.

case closed. NFA sent to Mr. Ravner. letter emailed to Mr. Ravner, Ivy at PW Grosser and Mr. Sharma at UTB.

while removing dry cleaning equipment loss occurred to sidewalk.

DEC Investigator Remarks:

10/02/13-Hiralkumar Patel. 1:34 PM:- left message for Mike. 1:38 PM:- received call from Mike. he lives on fourth floor of the building. he mentioned that dry cleaning facility on ground floor was closed for about six months and currently contractor is removing equipments. Mike mentioned that unknown amount of dry cleaning fluid spilled while moving equipments and there is strong odors in building. Mike is concernd about health impact to his family. 2:30 PM:- visited site with DEC Mahat. its 15 story mixed use building with basement. met with Mike and Fidel Colonio (building super). Fidel mentioned that yesterday around 10 AM, they noticed strong chemical odors in building for about two hours. he stated that odors originated from a out-of-business dry cleaner located along Amsterdam Ave. Fidel immediately informed building management about the odors. he was asked to open lobby doors on all floors for ventilation. odor level reduced after two hours.

inspected building's main lobby and Mike's apartment on fourth floor. no odors noted in building. found chemical odor at the door of the dry cleaner. the dry cleaner was closed and there was no access for inspection. inspected basement. found chemical odors only in water main room which is located just beneath the dry cleaner.

spoke with David Goldberg at management office. informed him about chemical odors in building and complaints from tenants. asked him to set up ventilation system inside the dry cleaner shop immediately to prevent any more accumulation of odors inside the building. Mr. Goldberg mentioned that outgoing tenant hired AARCO Environmental to remove dry cleaning machinery.

spoke with Steve at AARCO Environmental. he mentioned that AARCO Environmental was hired by building management and not by the tenant. he confirmed that there was odors during removal operation. machine is partially removed.

found two vent ducts in backyard of the building. Fidel mentioned that one vent duct, which ends at roof top, belongs to restaurant and the other vent duct, which ends in backyard close to first floor level, belongs to dry cleaner.

spoke with Mr. Goldberg. he mentioned that Bestway will install ventilation by tonight.

spoke with Shalom at Bestway, who is responding this evening to set up ventilation system inside the dry cleaner. informed him that system must run continuously until its removal is approved by the department.

met with Mike, before leaving the site. he confirmed that situation is much better compared to yesterday. his wife has scheduled a physical checkup, due to possible adverse effect of chemical vapors in building.

during inspection, noted an active fill port and vent pipe in front of dry cleaner.

(917) 361-8882 (C)

7:25 PM:- received message from Shalom. they finished installation of air scrubbers in the building.

10/04/13-Hiralkumar Patel. alternate address: 341-347 Amsterdam Avenue, 175-179 W 76th Street

no other spills found.

PBS #: 2-609418. as per PBS record, the site has one 5,000 gal #6 oil AST on saddles. the PBS registration expired on 12/26/2012.

9:30 AM:– visited site. met Fidel. he mentioned that total five air scrubbers installed in the building: one inside the dry cleaner, one in water main room in basement and one each on 4th floor, 6th floor and 9th floor. exhaust from all air scrubbers discharge into backyard. air scrubber in dry cleaner is connected to vent duct from the dry cleaner. no odors noted in main lobby, in water main room or at dry cleaner door. no access to the dry cleaner.

11:20 AM:– spoke with Mr. Goldberg. informed him about expired PBS registration. he mentioned that the building is using 5,000 gal #6 oil (which will be converted to #2 oil in spring of 2014) tank. he will check with building manager regarding registration renewal. Mr. Goldberg also mentioned that there is another tank inside the dry cleaner which was used for steam generation as part of dry cleaning process. informed Mr. Goldberg that the second tank, on the site, is not registered. he stated that he saw tank registration for dry cleaner tank and will provide registration number.

asked Mr. Goldberg to run scrubber continuously until the project is over and confirmed no more issues in building. also asked him not to paint any part of dry cleaner store prior to the Department's inspection, as need to confirm condition inside the store.

11:53 AM:– spoke with Heiki at AARCO. she confirmed that all machinery and dry cleaning related items were removed yesterday. she mentioned that there was no spill, but odors were generated from the machine itself, during removal.

discussed with DEC Nirangan Gandhi. he mentioned that the department requires submission of Notice of Equipment Shutdown prior to removal of dry cleaning equipment. Mr. Gandhi checked database and could not find registration of the dry cleaning facility at the site. he asked for joint inspection by spills and dry cleaning section. he also mentioned that NYC DEP dry cleaning unit may be informed.

DEC Benedicto Loreda of dry cleaning section will join in inspection.

1:26 PM:– spoke with Mr. Goldberg and scheduled a site inspection at 2:30 PM on 10/08/13. informed Mr. Goldberg that the department requires presence of representative of building owner/manager and project manager from AARCO Environmental, during the site inspection.

1:54 PM:– discussed case with NYS DOH Mike Hughes. due to short period of time when vapors noted inside the building, absence of odors in building and corrective actions taken including removal of source and installation of air scrubbers, NYS DOH does not require any action at this time. future investigation(s) of indoor air may be required based on further inquiries, if received.

3:03 PM:– sent email to NYSDOH Hughes and NYCDOH D'Andrea including copy of spill report and available pics.

3:05 PM:– sent email to DEC Gandhi and DEC Loreda including copy of spill report and available pics.

10/08/13–Hiralkumar Patel. 2:10 PM:– visited site with DEC Mahat and DEC Loreda. met Joshua Schwartz (management representative), Steve (AARCO) and Fidel. inspected dry cleaner location. no odors found inside the store. no signs of spill noted inside the store. DEC Loreda asked Steve to submit disposal manifests for solvent and dry cleaning machine. he also asked to submit required paper work reference to registration and closure of dry cleaning facility.

inspected 4th floor. no odors noted in lobby. spoke with lady in Mike's apartment, who confirmed no odors.

inspected basement. no odors noted in water main room. no chemical odors noted in sewer trap pit, located inside the water main room.

site has one 5,000 gal AST on saddles, inside a secondary vault with access. the tank is located along southern foundation wall, along W 76th Street. found oil stain on tank wall, but no odors noted inside the tank room. the fill port is at the curb along W 76th St. vent pipe is located in alley, along eastern edge of property, behind the alley door. as vent pipe is not visible from the fill port location, suggested Mr. Schwartz to relocate it.

searched for other tank, associated with fill/vent located outside the dry cleaner. no other tanks found at the site. Mr. Schwartz and Fidel does not know about previous tank. asked them to seal the fill port, located in front of the dry cleaner, to prevent misdelivery.

based on observations during site visits and information available to date, case closed.

CALLER STATES THAT CONTACT PERSON IS FROM DOT STATING THAT CON ED IS DUMPING OIL IN SEWER LINE AT LOCATION.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC INSPECTOR'S NOTES Tried to contact Kay Williams, Dispatcher said there was no one by that name at that number. Left my name and number for call back. DEP dispatcher corrected the name to Mr. Williams, called him but he was out to lunch, I left a message. Contacted ERT Kessler, he has no report of incident at that location but he will call Manhattan #9 crew.

Call back from Ray Lo ERT- Crew got summons from DOT for improperly closing the street. They have a vactor on scene which is pumping debris and water from structure.

Called DOT and asked for Mr. Williams, he will not be in all week.

Called ERT- spoke with Bill Capune. He was at scene , crew had removed transformer and were vactoring debris from vault, no oil spilled in vault. Crew had street and sidewalk blockaded. City DOT worker walked inside barricade, he wa stold he could not enter work zone without hard hat. He wrote them a tickrt for closing street/sidewal without a permit.

No spill.

Caller Remarks:

DURING TANK REMOVAL CONTAMINATED SOIL WAS DISCOVERED ON TOP OF CEMENT SLAB: OIL WAS MIXED IN WITH SAND:

DEC Investigator Remarks:

08/2/06–Zhune Spoke to V. Lovari from Island Tank. Soil samples were performed (1 bottom, 2 end–points, 2 sites). 08/2/06 sent CSL to Owner Mr. Bill Carr at: 236 West 26 Street, Suite 605 New York, NY 10001

08/10/06–Vought–Received message from Dan (Alliance Builders 212–463–9229) looking for contact info for DEC Zhune. Vought returned call and provided information and Dan indicated that he was already able to contact DEC Zhune.

8/6/10 – Raphael Ketani. I received this case from Jeff Vought who transferred to the Superfund, Brownfield Unit in Region 2 DER.

The spill took place on 7/24/06 and consisted of the discovery of contaminated soil on top of a concrete slab when a UST was removed. The UST had contained an oil and sand mix inside. The contractor was Vinny Lovari of Island Tank (718) 967–9424/cell (347) 416–9961.

The site location is 36 West 74th Street, Manhattan. The block and lot are 1126 and 52. The property was sold to the Bikuben Foundation New York, Inc., c/o Holland & Knight, LLP, 195 Broadway, NY, 10007 on 10/11/05.

I could not find a PBS registration, nor any additional cases with the above address. There is no paper file. The E–docs contain just the CSL. I tried the Alliance Builders number, but it was out of service.

As there has been no response from the owner regarding the cleanup of the soil contamination, I sent a standard followup letter to the Bikuben Foundation.

8/19/10 – Raphael Ketani. Vinny of Island Tank (347) 416–9961 called me and told me that he will look for the file folder that contains the documentation showing that the cleanup was completed.

9/21/06 – Raphael Ketani. Michael Di Paolo (212) 513–3319 of Holland and Knight (attorneys for the Bikuben Foundation) called. He said that he had represented the Bikuben Foundation in the past and he was trying to find his client in order to respond to the DEC's letter. He asked that I give him more time to locate them and get the necessary cleanup documentation to the DEC. We agree to a deadline of 9/28/10.

10/25/10 – Raphael Ketani. Today I received the tank replacement and soil investigation report dated July 19, 2006 from Island Environmental Tank. The report was sent to me by Mr. Di Paolo. The report contained an affidavit of tank removal, the full soil analytical report, and the tank closure report. I began my review.

10/27/10 – Raphael Ketani. I finished my review of the tank replacement and soil investigation report. The soil end point analytical results were almost entirely non–detect. There were only two benzene hits that were very slightly above the TAGM limits.

As the data in the tank removal and soil investigation report indicates that virtually all of the oil contamination had been removed, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case.

APPROX 1/2 GAL OF WATER IN MAN HOLE WITH ONE QUART OF UNK TYPE OIL ON IT. SAMPLE TAKEN FOR TESTING. 120500 CON ED SPILL NUMBER.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis 120500

10/14/98 00:40 MAXWELL(RW) REPORTS WHILE CHECKING MANHOLES FOR BLOWN LIMITERS FOUND SPILL OF 1 QUART OF UNKOWN OIL MIXED WITH 1/2 GALLON OF WATER IN MH29424 LOCATED S/W/C W 75 ST & C.P.W. SPILL APPEARS TO BE SOME TYPE OF OIL. THE SPILL IS CONTAINED, THERE WAS NO ENTRY TO ANY SEWERS OR WATERWAYS. THERE ARE NO SEWER CONNECTIONS IN THE MANHOLE AND NO VISIBLE CRACKS. MR MAXWELL INSTALLED PIGS AND DIAPERS AROUND SPILL, TOOK SAMPLE AND INSTALLED SPILL TAG #17209. THE STRUCTURE POSSIBLY CONTAINES PILC CABLE DISTRIBUTION FEEDER CABLE, BUT NO LEAKS FROM THE DISTRIBUTION FEEDER CABLES WERE OBSERVED. SPILL WAS REPORTED TO MCHUGH IN THE CONTROL CENTER AT));40 HRS ON 10/14/98. LOGGER PGM

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning

material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis. If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

LOGGER PGM 10/14/98 03:00 hrs. Astoria Chem-Lab called Russo #45348 @ MCC #9 desk and reported that the sample taken will req 48 hrs to do analysis.

10-16-98 11:05 Cleanup complete on 10-15-98 at 13:30 hours, supervised by J.McCabe 00305. 1-quart oil removed with absorbant, mh was then double washed. No results available cleaned as 50-499 PPM. 3-55 gallon drums hazardous waste generated. NYP004019162. Tag left in place pending sample analysis. Crew: J.Rivera 16937, E.Sims 37665, and R.Calderon 19847.

10/17/98 21:37 RECEIVED LAB RESULTS AT 21:14 LAB SEQUENCE # 98-11007 AROCLOR - 1254 PCB - 9 PPM R.BRUNS # 21106

10-19-98 10:45 Tag removed 10-19-98 at 0800 hours by M.Brotko 10504.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY DEC INSPECTOR'S NOTES Ref.# 134236, DEC #0009010 Results PCB 1ppm J& D Waterproofing.

CON ED E2MIS REPORT 11-03-00

This service is approx. 50 feet from SB13705 (See Incident #134236) for reference.

Approx. 30gals. of unknown substance in approx. 2ft of mud and debris and approx. 10 gal. of water in service box SB 13704 located first service box east of Amsterdam Ave. and West 76th St. There was a contractor cleaning the building and using a gel type substance. The contractor packed up and left before MR. Driskill could get his identification or the type of substance used.

The unknown substance is approx. 30 gal. of mud (paint, debris and gel). there was smoke/steam involved when discovered. There is standing water but no visual movement. There is no sump pump running and a sewer connection connection and concrete sump cannot be verified.

Contractor has returned to this location and is cleaning again. The unknown substance has been reported running down the street and around the corner by our field crews.

Update Notified the DEP hazmat Team of the subject events and they will respond. Requested that they try to protect the sewer drains and our service boxes and manholes from becoming contaminated with this unknown substance. We also requested that the service boxes be barricaded until Clean Harbors starts the cleanup.

10:35 Received lab results of the oil ID extraction of submitted sample yielded an insufficient amount of material for an oil identification analysis.

PCB <1.0ppm X-ray fluorescence and microscopic spot testing indicate that their submitted material consist mainly of silica. Significant amount of calcium carbonate titanium, iron, zinc, lead and organic matter were also present.

Flash Point 201 Deg. F

The following information is from the Clean Harbors Work Sheet. 2 service boxes cleaned. Disposal: six solid drums, weight 1,800lbs.

Reference #0009011 (E2MIS #134237) Results<1ppm PCBs

CON ED E2MIS REPORT 11-03-00

Approx. 4gals. of unknown substance and approx. 2gals. of water in service box SB13705 located along the building line 170-174 West 76 St. Contractor cleaning building 170 W. 76 Street using a gel type substance. The contractor hosed the gel off the building and then hosed the street down which is the possible source of the unknown substance in our service box. The contractor left before Mr. Driskill could get his identification or the type of the substance used. The unknown substance is approx. 4gals. of paint, debris and gel. There was smoke/steam involved when discovered. No evidence of any release to sewer or waterway.

11-03-00 13:35hrs. Contractor has returned to this location and is cleaning again.

Update 14:10hrs. ERT Akbar notified DEp Hazmat team of the subject events and they will respond and deal with the contractor. The Environmental Desk updated #9 Supervisor Jim McCutchen and requested that he inform our field crews that the DEP was on the way and also requested that they try to protect the sewer drains and our service boxes and manholes from becoming contaminated with this unknown substance.

Update 20:40 hrs. DEP rep Stanley Siebenberg gave his permission for Con Ed to barricade the service boxes and return at 14:00hrs on 11-04-00 for the cleanup by Clean Harbors.

11:16 Lab Seq#00-10583-001 The oil extracted from the soil does not match any of our standards and may be too degraded to make an identification. Aroclor 1254 PCB 1ppm

Update 11-06-0 Clean harbors Work Sheet 2 service boxes cleaned. Break down equipment and move in between each service box. Depart site at 11:15pm Disposal: 6 solid drums, weight 1,800lbs

CALLER FROM APPROVED OIL RECEIVED NOTIFICATION FROM FIRE DEPARTMENT OF LARGE SPILL AT ABOVE LOCATION. APPROVED OIL HAS NOT MADE A DELIVERY THERE SINCE THURSDAY 11/8 AND THERE HAS BEEN NO EVIDENCE OF A SPILL UNTIL TODAY. APPROVED OIL CLAIMS NO RESPONSIBILITY. SPILL MOSTLY CONFINED TO BASEMENT, BUT SOME HAS GONE OUT INTO THE STREET. FIRE DEPT ON SCENE.

DEC Investigator Remarks:

DEC Piper received call off hours. I contacted Battalion Chief and he stated oil was on sidewalk and into street. I informed him that I will have approved oil clean up spill. I called Vincent and instructed him to clean spill immediately. He obliged. Later I recieved a call from the Chief. He drove by site and it is cleaned up. closed.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was AUSTIN KATHY H:212-787-9803 W:212-250-2789

2/7/98 mmm:MULQUEEN & SACCACHIO INSPECTED LOCATION AND SURROUNDING NEIGHBORHOOD. FOUND OIL ODOR IN FRONT BEDROOM OF 52 WEST 85TH AND TRACE OF OIL ODOR IN FRONT OF HOUSE BY HOUSE TRAP. HOUSE HAS NEW OWNERS THAT MOVED IN JULY '97. STATED THAT ODORS STARTED IN OCTOBER. HOUSE HAS NEW GAS FIRED HEATING SYSTEM IN REAR EASTERN ROOM. OLD OIL TANKS WERE LOCATED IN THE FRON WEST SIDE OF HOUSE ADJACENT OT COAL SHOOT WHICH HAS BEEN FILLED. INSPECTED #50 WITH SUPER, GEORGE. NO OIL ODORS OR OIL STORAGE IN #50. FLOOR IS SOFT IN AREA WHERE OLD TANKS USED TO BE. INSPECTED SURROUNDING HOUSES AT CURBLINE. MANY OF THE HOUSES HAVE ABANDONED FILL PORTS. DOES NOT APPEAR TO BE GROUNDWATER PROBLEM AT THIS TIME. 3/2/98 mmm: KATHY CALLED AND STATED THAT THE ODORS ARE BACK. 11:00 INSPECTED HOUSEHOLD WITH PID AND FOUND 0-2 PPM IN LIVING SPACE AND 10-15 PPM IN HOUSE TRAP. NOTICABLE FUEL OIL ODOR IN FRONT BEDROOM AND IN FRONT ROOM OF BASEMENT. HIGHEST ODORS BY HOUSE TRAP. INPSECTED #54 AND FOUND NO OIL ODORS IN HOUSE OR BASEMENT. NO PID READINGS. INSPECTED SEWERS AND FOUND THAT EACH MANHOLE HAD 10-15 PPM HEADSPACE. COULD NOT PULL MANHOLES DUE TO ALTERNATE SIDE REGULATIONS. FOUND EVIDENCE OF RECENT FUEL OIL DELIVERY IN FRONT OF #36, AND EVIDENCE OF PAST FUEL OIL DELIVERIES AT #22, & 30. TRIED TO INSPECT THE LARGER BUILDING ON CENTRAL PARK WEST AND W. 85TH BUT COULD NOT GAIN ACCESS. APPEARS THAT PETROLEUM IS ENTERING SEWERS DURING DELIVERIES, AND THAT AP HAS PROBLEM WITH HOUSE TRAP AND VENT. TOLD AP TO GET PLUMBER TO LOOK AT HOUSE TRAP AND POSSIBLY INSTALL CHECK VALVE TO BLOCK VAPORS. CALLED DEP AND SPOKE TO ALBERT GORDON WHO SEEMED TO THINK THAT THIS HAS BEEN A LONGTIME PROBLEM AND THAT THE SOURCE HAS BEEN UNDER INVESTIGATION FOR ABOUT 2 YEARS. CALLED DEP BACK ON MARCH 9TH. SAGAR WENT TO SITE IN PM AND ODORS HAD DISSIPATED. DID NOT GET ANY READINGS IN SEWER.

10/9/03 - AUSTIN - SOURCE NOT FOUND, VAPORS FROM SEWER, NO FURTHER INFO - CLOSED - ORIG. ASSIGNED TO MULQUEEN - END

ABANDONED TANK FIELD AT LOCATION – SOIL SAMPLES WERE DONE AND READINGS CAME BACK HIGHER THAN THEY SHOULD BE–TANKS HAVE BEEN PREVIOUSLY ABANDONED – GEO PROB WAS DONE

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

TANK ABANDONED 6 YEARS AGO. CHANGED from Mulqueen to Sigona on 3/30/2000.

DEC Sigona conducted site investigation on September 26, 2000, and verified locations of monitoring wells and soil sampling locations. Former 4 x 550 gallon USTs closed in-place. The tanks were not registered. DEC (sigona) sent a letter to Real Estate Investments, Inc. on December 14, 2000 to close the spill. Requested registration of the USTs.

Caller Remarks:

ABOVE MATERIAL REPORTED DISCOVERED AT ABOVE LOCATION 3RD PARTY TO CON EDISON. SAMPLES BEING TAKEN BY CON ED FOR PCB. UNCONFIRMED INFORMATION THAT SITE WAS A FORMER GASOLINE STATION. UNKNOWN AT TIME OF CALL WHO IS RESPONSIBLE FOR CLEANUP.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT Referred to Tim DeMeo for follow up (JHO 6/18/01)

Con Ed e2mis #137718:

6-18-01 @ 12:15

While working at 200 w 76 st K Watts # 19705 of construction management reports that Felix contractors while digging an excavation on customers property to install an a.c. service they discovered 10 gallons of an unknown oil & gasoline mix. Felix was working for Con Ed at the time the spill was discovered.

05/06/03 @ 9:30 – As per Jimmy Delia on 05/02/03 the clean up was completed by the contractor and 6 drums of non-haz contaminated soil was transported by Astoria Transportation for disposal.

04/12/04

TRANSFERRED FROM DEMEO TO VOUGHT. ROMMEL

10/13/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Contacted Mr. Tony Delgado at (212)580-6763 he said he will find out about the spill and he will call me back. –QA

10/25/06: Called Mr. Tony Delgado and talked to Mr. Stephen Martis he said he will find out information of spill and he will call me back. –QA

11/10/06: Called at (212)580-8383 and talked to Mr. Dave Duke (Con Edison Environmental). He said Mr. Kerry Watt, Construction Manager knows about it. He was involved in cleanup of this spill. Mr. Dave Duke already e-mail to him. Mr. Kerry Watt will be available on November 13. As soon as Kerry Watt will reply to Mr. Dave he will contact me regarding spill. –QA

11/14/06: Mr. Dave Duke called me and said he needs more time to dig out the information of the spill. In next week he will send information to me about the spill. –QA

11/16/06: Called Mr. Bharat Mukhi he said he will fax me the lab results of soil sample. –QA

11/20/06: Talked to Mr. Mike Daughtrey about spill that this spill was previous gas station it needs additional investigation. Mr. Mike will find out the owners name of the spill and he will call me back. Mr. Bharat Mukhi called me he said he will find out the name and address of the spill and he will call me back. –QA

12/13/06: I wrote a letter to Mr. Paul Wertheimer on dated 12/12/06 at the address: Jewish Community Center / The Upper West

Side, Inc. 332 Amsterdam Avenue, New York, NY 10023–8205. The Department requires additional investigation to determine if there has been an impact to groundwater and to fully delineate soil and groundwater contamination. Prepare a Work Plan and submit it for review of Department. –QA

01/12/07: This spill case transferred to J. Kolleeny. Spoke to Paul Wertheimer of Jewish Community Center in Manhattan (JCC) in mid–December, asked for info about this spill and activities associated with removal of Exxon Station from this site. He mentioned that a vapor extraction system had been installed, said he would get back to me. On Jan. 5, 2007, received letter from Mr. Wertheimer (in eDocs) stating spill of 50 gallons occurred during filling of generator storage tank in basement, spill was contained and cleaned up. Also stated there is a vapor barrier under building. I sent email back (in eDocs) saying 50–gal spill in basement is not related to this spill case, which is related to contamination from former gas station. Asked if JCC has any documentation on actions taken to address contamination from gas station – phase I & II envt'l site assessment reports, UST closure reports, etc. PW faxed me a report by AKRF, Inc. (Env't'l Consultants) addressed to Kerry O'Dowd of DEC, dated Jan. 18, 2000, with cover letter to Anthony Sigona of DEC dated May 8, 2000. Report states that 10 USTs were removed from Exxon sta. in 1995, contam. soil found, spill reported no. 9413181. Exxon removed some contaminated soil and spill was closed in 9/96.

In July 1999 during groundbreaking for new JCC building, old fuel oil UST and O/W separator tanks found, with large amounts of contaminated soil. This, along with a series of odor complaints by neighbors during construction activities, led to spate of new spill reports: 9904938, 9904995, 9904998, and 9905193, under address 332 Amsterdam Ave. All were subsequently closed, mostly by Sigona in '03, one by Dave Harrington (Central Office) in '04.

AKRF rpt. (in eDocs) goes on to summarize removal of old tanks, removal of soil/rock to depth of 35 feet, extending a little beyond site boundaries. Rpt. states they are in process of removing add'l contaminated soil, down to bedrock and curb line. Said end–pt. samples will be taken, and proposed installing geonet vapor barrier on exterior of foundation walls down to competent rock, with vapor collection pipes within geonet layer connected to header pipes near top of foundation walls. Pipes to be connected to blower which will discharge to carbon treatment system. Also, underslab drainage sump will be enclosed and connected via vacuum pipe to vapor treatment system. Cover letter to Sigona states that vapor extraction piping system was installed around foundation exterior, is about to be covered in concrete, and that K. O'Dowd had verbally approved system but they never set up formal stip. agreement, and JCC would like to have written DEC approval for system. I spoke with PW on 1/12/07, asked if there's any follow–up documentation from AKRF for proposed add't'l soil removal/end–pt. sampling, and to confirm if vapor system has active blower, in which case discharge must be sampled and regulated. He said he will contact AKRF and get back to me. – J. Kolleeny

01/19/07: On 1/16/07, received fax from Paul Wertheimer of JCC with basement sump water analytical results (in eDocs) for sample taken in July 2004 to see if discharge to sewer is in compliance with NYCDEP requirements; sample results show target compound levels well below DEP limits. Also, received email from PW saying he checked venting system, which does have blowers, but he confirmed that blowers were off and looked like they'd been off for quite a long time. Based on AKRF report's description of excavation work done and fact that water in basement sump did not appear to have any petroleum contamination when sampled in July 2004, it appears that contamination at this site caused by former gasoline station has been adequately addressed, and it seems likely that discovery of gasoline/oil mix in soil by Con Ed workers that lead to this spill report was a small pocket of residual contamination, which was then dug out and drummed. No further action is required, and this spill is closed. See also related spills 9904938, 9904995, 9904998, and 9905193, all of which have been closed. – J. Kolleeny

Caller Remarks:

26ppm of gasoline detected in soil. Groundwater showed 101ppb of benzene. Caller believes spill was caused by historical spillage on property.

DEC Investigator Remarks:

09/14/07–Hiralkumar Patel. spoke with Mr. Anderson. asked him to send analytical data with site plan including sampling locations, for review. he will send full report lateron.

Jeff Anderson Atlantic Environmental Ph. (201) 876-9400 Ext. 303

(201) 918-1218 (C) email: janderson@solutionsenvironmental.com

spoke with Joel Weinstein (212-888-7400) at Chapman consulting. as per Mr. Weinstein, they used to manage this property, but no more. he asked to contact Hertz.

PBS #: 2-453277. as per PBS record, site has two in-service 1000 gal gasoline USTs and three closed out 550 gal gasoline USTs.

left message for Tracy Masella (201-307-2423) at Hartz corp.

spoke with Ms. Masella. she asked to contact Tim Egan. as per Mr. Egan, Hertz has leased this site.

Tim Egan

****tank owner's representative**** The Hertz Corporation Environmental Program Manager 225 Brae Blvd Park Ridge, NJ 07656 Ph. (201) 307-2526 email: tegan@hertz.com

asked Mr. Egan to provide property owner's information. Mr. Egan also mentioned that there is an excavation going on at next door property (don't know which side).

alternate add: 206-210 W 77th Street

spill reported in neighbourhood:

1. 219 W 77th Street: National car rental. Spill #: 0312284. this site is in front of Hertz car rental site. found groundwater contaminated during tank removal. DEC Ketani has asked for another set of groundwater sampling. spill still open.

2. 348-354 Amsterdam Avenue. alternate add: 202-204 W 77th Street. spill #: 9808769. spill was reported as found contaminated soil. case closed. no notes. propertyshark.com shows garage at site. <-----

received call from Mr. Egan. as per their records, property owner is:

Richard Chapman

****property owner**** Ricland LLC. (owner of property) Chapman Consulting LLC. 770 Lexington Avenue 18th Floor New York, NY 10021 Ph. (212) 319-0939 Ext. 306 Fax (212) 319-1841 email: richard159@usa.net

left message for Mr. Chapman.

received call from Mr. Chapman. he is property owner. they did investigation as planning to convert existing buiding into residential complex with offices on ground floor. they are also planning to add floors to it. ask him to do further delineation of soil and groundwater contamination.

received phase II summary report from Mr. Anderson. abstract:

- installed six borings (SB-1 to SB-6) adjacent to the two 1000 gal gasoline USTs, located in the basement - two sump wells (BW-01, BW-02) are located within the UST tank field in basement. <----- - installed three additional borings (SB-7 to SB-9) in the vicinity of the heating oil UST located under the sidewalk in front of the building, along W 77th st - borings SB-1 to SB-6 were advanced to depth of between 2.5 ft bg and 9.5 ft bg - borings SB-7 to SB-9 were advanced to depth of between 4 ft bg and 7 ft bg (unknown depth of heating oil UST invert) - one soil sample was collected from each borings (total of 9 soil samples) and one water sample was collected from each sump well (total 2 samples) - PID readings during boring, were between non-detect and 15 ppm except SB-4 (300 ppm) <----- - sample SB-4 was taken at 2.5 ft bg <----- - found high Xylene contamination in sample SB-04 (26,000 ppb at 2.5 ft bg) <----- - found contaminated water from sump well BW-02 (Benzene: 101 ppb, Toulene: 196 ppb) <-----

report missing following: – site map is missing locations of dispenser islands, remote fill ports, previously closed 550 gal gasoline USTs, fill port for fuel oil UST, fuel oil UST invert depth – detailed soil boring logs – depth of sump wells – analytical data package from laboratory

requires following: – registration of 1000 gal heating fuel oil UST – sampling, at least 5 ft, below depth of abandoned UST invert under sidewalk as samples taken to max depth of 7 ft (tank invert could be at 6 ft and was abandoned)

spoke with Mr. Anderson. he mentioned that submitted report was just a summary, not full report. he will send detailed report soon (by Sep. 31). asked him to include boring logs, well depth, how wells were installed etc. he also mentioned that Phase I was done at site. asked Mr. Anderson to submit Phase I report.

10/11/07–Hiralkumar Patel. spoke with Mr. Anderson. he is no longer working on this project. he will provide contact number for person working on–site.

left message for Mr. Egan to submit Phase I and detailed Phase II report. spoke with Mr. Chapman. he will send copy of previous reports.

10/15/07–Hiralkumar Patel. received message from Mr. Egan. left message for Mr. Egan to submit previous reports and RAP based on investigation work done till date.

10/18/07–Hiralkumar Patel. received Phase I and previously submitted Phase II summary report (not full Phase II). abstract of Phase I:

– local topography generally slopes to south – property has been graded with an average elevation of approx. 77 ft above mean sea level – shallow groundwater in the site area is expected to flow in general west, northwest direction – subject property is improved with a six story commercial building – fill cap was observed in sidewalk on the north side of building – it appears that heating oil tank is located beneath the sidewalk – historically, a carpet cleaning was located on the site and dwelling/stables – since 1929, the site has functioned as a car garage – identified two active 1000 gal gasoline USTs and three former 550 gal gasoline USTs <----- – based on historical sanborn maps, observed that the former location of three 550 gal USTs appears to be the same location as the currently active 1000 gal USTs

received email from Mr. Egan. he mentioned that Atlantic environmental did work for building owner and he only has summary report. he also sent letter with current tank test on two 1000 gal gasoline USTs. he also mentioned that during construction on adjacent property, which surrounds subject site on two sides, they noticed petroleum odor and found crushed tanks at site. Hertz tested entire gasoline tank systems and found tight.

spoke with Jeff at Atlantic environmental. as per Jeff they were hired to do certain work and they don't have full report.

spoke with Blaise Turi at Chapman consulting. asked him to provide complete Phase II report (instead of summary) with all missing information.

received call from Jeff from Atlantic. he will send missing information in Phase II.

10/18/07–Hiralkumar Patel. visited site. met Abdul at site. he showed locations for gasoline tanks in basement. no oil stains on

top of tank location. no odors inside basement.

visited next door construction site, which is located at 348 Amsterdam Avenue. met Dan Kerendi (212-362-9605), construction supervisor at site. as per Dan, they removed about 12 tanks from site. no contamination was found around those tank. found contamination in only one corner of site but it was too deep than tank located. currently they are removing soil from area which is close to Hertz's site and along foundation wall where gasoline tanks are on Hertz's property. asked Dan to monitor site for any contaminated soil. they dug remaining site to about 30 ft bg and did not encountered any groundwater. asked Dan to register removed tanks.

10/22/07-Hiralkumar Patel. received letter from Mr. Egan. abstract:

- site has two double walled fiberglass gasoline USTs in basement. - dispenser island is located on first floor. - USTs and lines are continuously monitored by a Veeder Root in-tank gauging system. - Hertz tested their tank system including pipings and all passes. - no current leak from existing gasoline system. - groundwater samples from sump wells, during Phase II, were collected by simply lowering bailer down and no purging was completed prior to sample collection and no sheen or product was observed

no word about fuel oil system under sidewalk.

spoke with Mr. Egan. asked him to find depth of sump well and see if there is a true groundwater in sump well (as no groundwater encountered in next door construction site which has excavated below subject site basement). also asked him to see if heating oil tank is active or not and to test heating oil system. Mr. Egan mentioned that they installed gasoline tanks at site, but not sure about heating oil tank. he will find who installed heating oil tank (owner or Hertz). they will register heating oil tank.

10/26/07-Hiralkumar Patel. received call from Jeff. he will send detailed report soon. he asked for responsibility of spill cleanup based on letter from Hertz submitted earlier. explained to Jeff that the department consider both owner and tenant responsible for cleanup.

received call from DEC Urda. he received call from owner's attorney Mr. Periconi asking for STIP.

James J. Periconi, Esq. Periconi, LLC PH. (212) 213-5500 Fax (212) 213-5030 e-mail: jpericoni@periconi.com

11/01/07-Hiralkumar Patel. left message for Mr. Egan regarding information about sump well and heating oil UST.

spoke with Mr. Egan. as per him, they never used heating oil tank and don't know who installed it. they are using gas heating system since they are on-site. he measured depth of sump well and found bottom at about 9 ft and less than an inch of water. Mr. Egan believes that water in sump well could not be true groundwater and could be surface water from basement floor.

sent STIP to Mr. Egan and Mr. Chapman with DEC Urda's review and approval. emailed copy of STIP to Mr. Egan, Mr. Chapman and Mr. Periconi.

11/23/07-Hiralkumar Patel. DEC Urda received STIP and DEC Region 2 Director signed the STIP. DEC Urda send email to Mr. Periconi with copy of fully executed STIP.

12/03/07–Hiralkumar Patel. received letter from Neale Bedrock, attorney representing Hertz. as property owner signed a STIP, Hertz is not taking responsibility of any contamination.

01/11/08–Hiralkumar Patel. received work plan from Mr. Anderson from Atlantic environmental. they will install 6–8 soil borings around tanks and piping. they proposing to install borings to depth equivalent to tank bottom and piping. he only proposes investigation around gasline tank and piping, but no indication about investigation around heating oil tank undre sidewalk. proposing to convert one boring, closest to tank field, into temporary well.

from previous investigation report, found that soil samples were taken from only three sides of heating oil tank. there was no sample from south side of tank. previous boring SB–4, where high xylene found, was located on south side of heating oil tank.

Mr. Anderson submitted boring logs for previous borings. from boring logs, groundwater was encountered at depth of 9 ft bg. but as per construction site next door, they did not found groundwater to depth of 30 ft.

received call from Mr. Anderson. as per Mr. Anderson, previous soil samples around heating oil tank were taken at 7 ft depth and after that they got refusal due to rock. aksed Mr. Anderson to take soil samples at least one foot below tank and piping bottom, if no refusal encounteres. also asked to take soil sample on south of heating oil tank, if possible. and to take groundwater sample from boring closest to previous boring SB–4, if they hit groundwater. Mr. Anderson mentioned that today during borings, they went deeper than previous borings and haven't found any groundwater. so previous groundwater in boring could be perched groundwater. asked Mr. Anderson to check for any perched groundwater and if not, take deepest dry and most contaminated soil samples at previous boring SB–4. asked Mr. Anderson to submit revised work plan.

01/31/08–Hiralkumar Patel. received call from Mr. Anderson. they got analytical results. asked Mr. Anderson to send sample analyticals and site map with sampling locations, for review.

02/08/08–Hiralkumar Patel. sent email to Mr. Anderson requiring report submission. received email from Mr. Anderson. will submit report by end of Feb. 2008.

03/18/08–Hiralkumar Patel. received investigation report from Mr. Anderson. abstract:

– topography of the surrounding area is generally flat and depth to groundwater at the site is estimated to 35 ft bg (based on information from adjacent construction site, where groundwater was found at 35 ft bg) – soil borings were advanced around the USTs and product supply lines – soil borings SB–10 through SB–18 were advanced to depths of between 1 ft bg and 8 ft bg due to mechanical refusal – PID readings were between non–detect and 15 ppm for all borings – no viable soil samples were recovered from the borings B–15 or 16 due to sand (no recovery) and in SB–17 or 18 due to sampling equipment refusal onto soild bedrock – soil samples collected from boring SB–10 to SB–14 – due to shallow refusal, unable to advance borings below the groundwater table

conclusions: – determined that the contamination is limited to immediate area of the USTs – as bedrock was encountered at less than 2 ft below floor level and soils encountered were found to be limited to sand and gravel in the UST excavation, the amount of soil contamination is minimal – determined that groundwater is more than 30 ft bg, it is clear that the tank wells contain trapped water and not waters connected to groundwater

recommendations: – current tenant lease is due to expire in Feb. 2009; as part of lease, the tenant is required to remove the tanks. – remedial activities relating to sand/gravel and trapped rain water will be conducted at that time

no contamination found in any samples taken recently. samples SB-10 and SB-11 were taken close to previous boring SB-04. both samples taken deeper than SB-04. during previous Phase II investigation, found black sand and fill material in SB-04 and found 300 ppm PID reading in that boring. so contamination in SB-04 was found right above bedrock.

spoke with Blaise Turi (Ext. 301) at Ricland LLC. explained him that contamination has found in only one sample SB-04 at 2.5 ft depth and that is on top of bedrock. to confirm containment of such contamination, the department requires true groundwater sample at the site. or else they can excavate soil and remove that contamination. if takes groundwater sample and finds clean then only the department can wait for a year before tenant's lease expires and remove tanks and contaminated soil in Feb. 2009. also mentioned to Mr. Turi that depth of tank bottom under sidewalk is still unknown and that tank might be causing contamination at the site. asked Mr. Turi to talk to Mr. Anderson and to call back with decision about either bedrock well or excavation at the site.

left message for Mr. Anderson at Atlantic environmental.

received call from Mr. Anderson. he mentioned that an employee, working at the site, confirmed that there was an aboveground heating oil tank in basement and was removed long time back. there was no tank under a sidewalk. Mr. Anderson mentioned that excavation around SB-04 is not possible without removing existing tanks. with these provided information, asked Mr. Anderson to install well for groundwater sample. if groundwater finds clean then only the department can wait for another year or else remediation must be started.

spoke with Mr. Turi. asked him to schedule well installation and to provide work schedule.

03/25/08–Hiralkumar Patel. spoke with Mr. Turi. he will call back with work schedule for well installation.

03/28/08–Hiralkumar Patel. received call from Mr. Anderson. he asked for letter for well requirement. sent email to Mr. Chapman and Mr. Anderson mentioning that as per CAP for STIP, the department requires complete (horizontal and vertical) delineation of contamination. and under that requirement, the department requires monitoring well. no separate letter will be issued.

04/24/08–Hiralkumar Patel. received call from Mr. Anderson. he mentioned that Hertz require confirmation from the Department regarding installation of well.

Neil Bedrock law dept. at Hertz PH. (201) 307–2902 email: nbedrock@hertz.com

left message for Mr. Egan and Mr. Bedrock requiring installation of monitoring well.

received message from Mr. Periconi, attorney representing owner. he mentioned that Hertz refusing access to site for well installation. received Mr. Bedrock's email address from Mr. Periconi.

04/25/08–Hiralkumar Patel. left message from Mr. Egan regarding well installation. sent email to Mr. Egan, Mr. Bedrock, Mr. Chapman and Mr. Periconi regarding requirement of well installation.

05/16/08–Hiralkumar Patel. spoke with Mr. Anderson. they installed well yesterday and will sample next week. they installed well inside basement to depth of 35 ft below basement floor.

06/19/08–Hiralkumar Patel. received call from Mr. Anderson. they received sample analyticals and found Benzene contamination. asked Mr. Anderson to submit report. asked him to include all previous and current borings/well locations on same map.

06/30/08–Hiralkumar Patel. received groundwater investigation report. abstract:

– topographic elevation at the site is approx. 77 ft above mean sea level – one groundwater monitoring well was advanced in the area of former soil boring SB–04 – well was installed to a depth of approx. 30 ft below basement floor; well screen was installed from 10 ft below surface to 30 ft – subsurface morphology consisted of cobbles and fill material with sand and gravel to approx. 6 ft, followed by weathered bedrock to approx. 24 ft and competent bedrock was encountered at 24 ft – petroleum odors were encountered for the initial 10–15 ft below the floor surface – groundwater was encountered during well installation at approx. 19 ft below basement ground surface; static well after well development was at approx. 24 ft below the basement floor – found VOC contamination in groundwater

-----MW-1 Benzene-----227 Toluene-----33 Ethylbenzene-----87
Xylene-----147 Naphthalene-----209

summary:

– no PID found in soil from 0 to 6 ft below basement floor – highest PID values found at 7 ft depth, below basement floor, in weathered bedrock

spoke with Jeff at Atlantic regarding machine used to install deep bedrock well inside basement. he mentioned that rock hammer was used for well installation. as per Jeff, current building will be demolished and then will be redeveloped.

left message for Mr. Chapman to know proposed redevelopment plans.

01/14/09–Hiralkumar Patel. received email from Mr. Turi and Mr. Anderson (Atlantic environmental). Hertz hired Envirotrac to remove gasoline tanks and they are removing now.

02/20/09–Hiralkumar Patel. received UST removal report. abstract:

– removed two 1000 gal gasoline USTs, three dispensers, one remote fill and associated lines – elevation of site is approx. 78 ft above mean sea level – USTs and pipings were inspected and found in good condition; no holes or cracks were observed – UST excavation consisted of dry, light brown, engineered pea gravel to a depth of approx. 7 ft bg – underground piping and remote fill excavations consisted of apparent competent bedrock – no groundwater was encountered in any excavations – in order to determine the depth of bedrock beneath the removed tanks, the UST excavation was continued vertically beyond the initial pea gravel layer to an approx. depth of 8 ft bg, where competent bedrock was encountered – during additional excavation activities under tanks, moist/grey pea gravel, exhibiting a slight odor and a PID reading of 193 ppm was encountered from approx. 7.5 to 8 ft bg, approx. 6 inches beneath the initial dry/light brown pea gravel layer located immediately beneath the removed tanks <----- – sample of pea gravel exhibiting a PID response was collected for analysis – no other soil samples collected as pipings were on bedrock – groundwater sample was collected from previously installed well MW–1 – groundwater was detected at 12.57 ft below the top of well casing – no contamination found in soil sample – VOC contamination found in groundwater sample

-----MW-1 (sampling in Jan. 2009) Benzene-----130 Ethylbenzene-----120

02/24/09–Hiralkumar Patel. spoke with Mr. Turi. mentioned to him that based on submitted tank closure report, no further action required in referenced to previous gasoline tanks. but the department still requires cleanup of contamination soil found in previous boring SB–04. Mr. Turi mentioned that they are selling property. told him that spill cleanup is required under the signed STIP agreement. mentioned to him that new owner must be informed about signed STIP. Mr. Turi asked to talk to Mr. Anderson.

spoke with Mr. Anderson. he mentioned that previous boring SB–04 was located in area of tank excavation. he mentioned that tanks were installed in bedrock and during tank removal, no soil was found, but only pea gravels. asked him to submit scaled site plan with excavation boundaries and previous boring and well locations.

03/03/09–Hiralkumar Patel. received message from Mr. Anderson. will excavated soil, around previous soil boring SB–04, on 03/05/09.

03/05/09–Hiralkumar Patel. received message from Mr. Anderson. they started removing contaminated soil in area of previous boring SB–04. during excavation they found old abandoned gasoline tank. they continue excavation and will remove tank and any contaminated soils.

03/19/09–Hiralkumar Patel. received report from Mr. Anderson. abstract:

– excavated area around previous boring SB–04 and found previously unknown 550 gal tank – UST was encased in concrete with some areas free of concrete, where steel was visible – thick layer of concrete was the cause for refusal of SB–4 – top of UST was located below a concrete pad approx. 4 ft bg – UST was approx. 3.5 ft in diameter and 7 ft long – approx. 80 gal of gasoline/water and sludge were removed – slight evidence of discharge was observed in material found between the bottom of tank and concrete base – concrete base was removed and found bedrock directly below the concrete base, no soil was present <-----
– if there was a release at the tank, it would pass through bedrock, then to the water table <----- – excavation of UST removal was approx. 20 ft long, 15 ft wide and 7 ft deep – excavation was deepened in one area to a depth of 9 ft and confirmed no groundwater present within 2 ft of base of excavation

03/23/09–Hiralkumar Patel. received call from Mr. Anderson inquiring status of the spill case. mentioned to him that based on all available reports, the department requires three more quarterly groundwater sampling from an existing well.

sent email to Mr. Chapman requiring three round of groundwater sampling on a quarterly basis. email copied to Mr. Anderson.

05/05/09–Hiralkumar Patel. DEC Urda received request from property owner's attorney regarding letter for requirement of three rounds of quarterly groundwater sampling.

05/14/09–Hiralkumar Patel. sent letter to Mr. Chapman requiring three rounds of quarterly groundwater sampling for analysis of dissolved oxygen, pH, redox, alkalinity, VOCs and SVOCs. letter emailed to Mr. Chapman, Mr. Periconi, Mr. Leland (richard.leland@friedfrank.com) and DEC Urda.

after sending letter, found DEC Urda's email with the same letter that he sent out yesterday as I was out of office. spoke with Urda. he sent out email to involved parties to disregard letter from me.

05/15/09–Hiralkumar Patel. received groundwater monitoring report from Mr. Anderson. groundwater sample from an existing well was collected on 04/16/09 and found some contamination in it. will continue quarterly groundwater monitoring.

groundwater analyticals:

-----MW-1 Benzene-----187 Ethylbenzene-----336 Xylene-----112

08/19/09–Hiralkumar Patel. 4:08 PM:– received GW monitoring report from Mr. Anderson. groundwater sample from existing monitoring well was collected on 07/16/09.

groundwater analyticals:

-----MW-1 Benzene-----132 Ethylbenzene-----219
Xylene-----15 1,2,4-Trimethylbenzene-----349

four rounds of groundwater sampling conducted since May 2008: 05/29/08, 01/19/09, 04/16/09 and 07/16/09. concentration for benzene, toluene, xylene and naphthalene has been reduced but concentration for ethylbenzene and 1,2,4-trimethylbenzene has been increased.

09/17/09–Hiralkumar Patel. 3:50 PM:– spoke with Jeff regarding current status of the site. Jeff mentioned that site has been sold and new owner will redevelop the site.

Jewish Board of Family & Children's Services, Inc.

****new owner**** 120 W 57th Street New York, NY 10019–3320 Attn.: Ellen Josem PH. (212) 582–9100 email: Ejosem@jbfcs.org

09/23/09–Hiralkumar Patel. 3:22 PM:– spoke with Ms. Josem. due to financial conditions, they choose to keep garage business (Hertz rental) at the site for few years and will redevelop this site once have enough source. she asked to contact Susan Bear (212–632–4706, email: SBear@jbfcs.org) regarding future plans and any tank that will be installed at the site for Hertz's use.

4:10 PM:– received message from Jeff. he mentioned that Hertz is not planning to install any more tanks at the site.

09/24/09–Hiralkumar Patel. case closed based on following:

– all tanks removed from site – no contamination found during tanks removal – groundwater at site is 24 ft below basement floor (approx. more than 35 ft bg) – contamination in groundwater decreased

NFA sent to Ms. Bear. letter emailed to Ms. Bear, Mr. Chapman, Mt. Egan and Jeff.

Caller Remarks:

Oil from unknown source discovered in soil. Further investigation and cleanup is pending.

DEC Investigator Remarks:

8/20/2015 - Feng - Duty Desk. Talked to Matt Boeckel of Associated Environmental (631-234-4280). The contractors were doing excavation, i.e. chipping down the bedrock using jack hammer, and found oil coming into the excavation. No tank is reportedly onsite. He will inspect the site tomorrow and will provide more information.

Assigned the spill to Santosh Mahat for a site inspection 8/21/2015.

8/21/15: Mahat t/c: DEC Mahat contacted Matt and he mentioned that ground water has been impacted while the property was excavated. A complete remedial work plan for the project and will submit to the Department for approval.

DEC Mahat received an email update from Matt:

Santosh the following email provides a summary of the information I have to date on the above noted project:

The site was formerly improved with a six story mixed use building. The first floor and sub-grade level were occupied by National Rent a Car. National Rent a Car is listed under PBS registration number 2-271292. The site is listed as having one 2,000-gallon gasoline UST closed in-place, three 550-gallon fuel oil USTs closed ~ removed as well as a 550-gallon and 500-gallon aboveground tanks in subterranean vault which were closed in-place.

The site had two (2) previous spills on file with the NYSDEC. Spill number 0310460 was for a 1-gal gasoline spill and was subsequently closed. Spill 0312284 was listed for gas unknown amount and was subsequently closed.

The former building has been demolished and the site is currently undergoing renovation. Part of the renovation entailed digging a deeper foundation. On August 20, 2015 while breaking up and removing bedrock from the northeast corner of the site groundwater was observed to be coming into the excavation. The water exhibited a strong petroleum (fuel oil/diesel) odor and there was a noticeable film of product present. The NYSDEC was notified and spill number 1505465 was assigned to the site.

Thank You,

Matt Boeckel

8/24/15: Mahat e/c: DEC Mahat sent an CSL letter to above address and it has been uploaded on D2 for reference. DEC Mahat is waiting for a report as mentioned on the letter.

12/21/15: Mahat E/C: DEC Mahat received a closure report on the spill case. It has been uploaded on D2 for reference.

Based on the spill closure report, a 2000 gallon tank was previously abandoned in place was found during the demolition. Tank is now removed and all end point sample are below CP 51 Guidance value. Based on the report, the Department does not warrant any further investigation on the spill case. Source is removed leaving a clean end points. Spill case is closed on NYSDEC Spill Database.

Caller Remarks:

leaking UST caused the spill. Unknown amount spilled. Not sure if clean up has started.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 2/5/2004 Sangesland spoke to Sharima Ryan of RND Services (845-348-6355). She says RND was called in to properly abandon several 550 gal USTs at the site which had been incorrectly abandoned some time in the past.

Phase I on the site says up to 6 – 550's existed. So far RND has found 3 – 550's which are filled with a combination of sand, water and gasoline. Several borings made through the tanks reveal the area under the tanks have gasoline contamination problems.

Within the next 1-2 days, RND will be submitting a plan to the owner discussing either removing the tanks and contamination or treating it in place. Bedrock in this area (West 77th St) is very shallow.

05/21/04

Email from Sharima Ryan:

We removed 3 gasoline UST's earlier this week and excavated a limited amount of contaminated soil (not more than 20 yards) and at this point are very limited in what we can do as a way of excavating additional material. In several parts of the excavation we are encountering ledge rock and using a larger machine to excavate is not feasible (unable to get it into the basement). We have placed ORC in the excavation (24' X 24') which is currently open and plan to install three wells within the excavation. The wells will be installed off to the sides of a concrete pad that the tanks were on. We will then backfill. There is some water in the excavation – this may be groundwater. We have soil samples of the sidewalls in some areas. I wanted you to comment on our

plans because going back and doing any additional work at this site is extremely difficult and if there was anything additional you would like us to do, I would rather try and accomplish it now.

Sincerely,

Sharima Ryan

RND Services Inc.

10 Waldron Avenue

Nyack, NY 10960

845-348-6355

Called Ms. Ryan, approved proposed work. Required that she document the condition of the bedrock surface and submit report to my attention. Rommel.

>>> Jennifer Rommel 08/20/04 04:0PM >>>

Sharima,

Reviewed 8/5/04 Tank Closure Report and agree with recommendation for gw sampling. Please provide report at the end of the three months.

7/13/05 TAS (TXSMITH) Called Sharima Ryan of RND, that performed tank closure, she said the gw sampling was not completed because the owner/operator did not have RND perform the sampling. Will contact Mr. Penner to see if there is any information.

7/14/05 TAS Talked to Mr. Penner and he said that the site was cleaned up (as mentioned above) but was unsure of the follow up gw sampling. He said he would check and the sampling would be completed if it was not done. Groundwater sampling should be performed and the next steps can be determined by these results. This site should be transferred back to the region for followup.

3/30/07 – Austin – Trasferred to Ketani for further review – end

5/11/07 – Raphael Ketani. The site is listed in the NYC Property Tax, Property Shark, and the Spills database as National Car Rental Systems, Inc., 219 W. 77 Street, NY, 10024. Block and lot are 01169/0023. The site was a 5 story apartment building with stores at the street level. The owner of the property is listed as Sygler, LLC, 545 Madison Avenue, NY, 10022 in the PBS registration #2-271292. The site has 5 550 gal gas tanks that were closed at the site. Two were closed in place and 3 were removed. One 2000 gal. gas tank remains active. There was gas contamination in the soil.

There was no paper file record, nor are there any E-docs. I tried to contact Sharima Ryan (845)348-6355, but could only leave a message.

5/14/07 – Raphael Ketani. James Wilson of RND Services (845) 348-6355 left a message stating that Ms. Ryan was on maternity leave

(back June 1) and that she was only occasionally checking her e-mails. He stated that I should contact him, instead.

5/16/07 – Raphael Ketani. I made contact with Mr. Wilson and asked him whether he was the case manager. He said Sharima was. I asked him to send any documents, pictures, etc. that RND had on the site as DEC had nothing. He said he will talk to Sharima and see what they can come up with.

8/1/07 – Raphael Ketani. Today I received the May 2004 Underground Storage Tank Closure Report and the 8/11/05 Technical Report for the groundwater. The groundwater results for the 8/4/05 samples still show concentrations that require remediation. The Closure Report was determined to be acceptable.

I contacted Ms. Ryan and told her that another round of groundwater samples was needed. She asked that I send her an e-mail to that effect. I sent the e-mail.

10/19/07 – Raphael Ketani. I contacted Sharima Ryan. She said that she just finished her review of the groundwater results. She said that they still show some hits, but they are better than in 2005. She said I should receive the analyticals next week.

11/9/07 – Raphael Ketani. I received the groundwater results.

11/14/07 – Raphael Ketani. I reviewed the 9/5/07 groundwater results. MW-1 had 3 VOC hits which were all very slightly above TAGM. MW-3 had 6 VOC hits which ranged from 12 ppb to 60 ppb. MW-2 had 9 VOC hits which ranged from 8 ppb to 380 ppb. At MW-2, 5 VOC hits were 120 ppb to 380 ppb. Depth to water is about 2.5' below grade.

11/16/07 – Raphael Ketani. A letter with map was sent to Ms. Ryan requesting the installation of 8 additional groundwater wells. The work requested includes soil and water sampling, groundwater flow direction determination, indication as to where the in service and other tanks are located, and construction of maps showing the streets adjacent to the property, the north direction and a scale.

12/5/07 – Raphael Ketani. I spoke to Ms. Ryan (845) 348-6355. She said that she thought the 11/16/07 DEC letter was asking for a lot of work. She also didn't have the record in front of her and asked that I give her time to review the file and call back. I said that would be alright.

12/12/07 – Raphael Ketani. I left another message for Ms. Ryan to call me back.

2/25/08 – Raphael Ketani. I tried to contact Ms. Ryan, but could only leave a message.

3/24/08 – Raphael Ketani. I spoke to Ms. Ryan. I asked her about the November 15, 2007 DEC letter that I had sent. She said that her client balked at putting in 8 more wells as it is a large expense. She said that bedrock is very shallow and that they had installed 9 borings back in 2004. She said she would like to just do another round of sampling. I told her that since 9 borings had been done in the past and that since DEC had approved the 2004 Underground Storage Tank Closure Report and the 2005 groundwater Technical Report, DEC will only ask for another round of groundwater sampling and a survey of the groundwater flow direction. She said that RND Services is going to do sampling at other sites and that National Car Rental can be worked into the schedule. I told her I will send a letter to her memorializing our conversation today.

The letter was sent.

3/31/08 – Raphael Ketani. Ms. Ryan e-mailed me and wrote that they will sample the wells April 4.

4/24/08 – Raphael Ketani. Ms. Ryan e-mailed me that the wells were sampled as scheduled on 4/4/08 and that a report will be sent soon.

6/16/08 – Raphael Ketani. I received the 6/9/08 Groundwater Sampling Report on Friday, 6/13/08, when I was out for the day. I began my review today. Well MW-1 had 6 hits with 15 ppb being the highest value. Well MW-2 had 8 hits with values from 14 to 110 ppb. The highest hits were 100 ppb and 110 ppb. Over the past 4 years, the contaminant concentration reduction by natural attenuation have been significant. Well MW-3 had 2 hits with 12 ppb being the higher of the two.

Based upon the groundwater analytical results in the 6/9/08 Groundwater Sampling Report, I am closing the spill case.

left message for Ms. Koff.

02/19/08-Hiralkumar Patel. received message from Ms. Koff. called Ms. Koff, but she was busy and will call back.

02/22/08-Hiralkumar Patel. left message for Ms. Koff.

received phase II report from Mr. Khouri from Langan. abstract:

- site comprises two adjoining building lots: 2148 Broadway (aka 214-220 W 76th st, 2148-2158 Broadway) and 210 W 76th street (aka 208-212 W 76th Street) 90% of influent VOC levels from the initial steady state readings or if two months have elapsed since the start of SVE system operation, the air inlet wells will be switched to be used as air extraction wells and vice versa - if the influent air levels to the air discharge control system show a sustained decrease of >90 % in the VOC levels from the initial steady state level, then the air samples of the influent will be collected and analyzed via method TO-14 - if sustained decrease in influent VOCs of >90% is not observed, then post-remedial soil sampling will be performed at an appropriate time prior to when the construction of site building is completed, until which the proposed SVE system will be in operation - if the contamination levels in post-remedial soil samples exceed limit even after site construction activities are completed, then a SSDS will be installed to prevent vapor intrusion into the building

10/28/09-Hiralkumar Patel. 2:54 PM:- received message from Susan from Langa regarding comments/approval on SVE system design.

11/02/09-Hiralkumar Patel. 10:50 AM:- left message for Susan. 11:50 AM:- received call from Mr. Khouri. he mentioned that they are changing locations of proposed SVE points and will submit revised plan with more details. during conversation, asked Mr. Khouri about soil delineation north of sewer line in street. Mr. Khouri mentioned that owner is planning to conduct SVE installation work first as wants to start construction and will do soil delineation across street later on. informed Mr. Khouri that the department requires complete soil delineation along with installation of SVE pipes at vault area. 12:44 PM:- left message for (and sent email to) Mr. Ortega to submit work plan and work schedule for complete soil delineation (including soil sampling across street) before any comments on proposed SVE pipes installation in vault area.

11/04/09-Hiralkumar Patel. 12:00 PM:- received message from Mr. Khouri. he mentioned that they are planning to install borings tomorrow and will install SVE wells.

but as per Mr. Khouri, they were revising plan and i haven't received revised plan and i haven't approved any plan yet.

received message from DEC Lou Oliva. spoke with Lou. he received call from Steve Russo regarding approval of installation of SVE pipes. Lou asked about status. informed Lou that Langan is proposing to install SVE wells in coned vault area to expedite installation of crane for construction purpose. but the department requires complete soil delineation including soil boring

across sewer line under W 76th street before transferring case to remediation group and remediation group will review remedial action plan for comments.

3:57 PM:– left message for Mr. Khouri. 3:59 PM:– spoke with Mr. Gol and informed her that the department hasn't approved any work plan yet and Mr. Khouri left message informing that they are planning to do work tomorrow. asked Mr. Gol to clarify this. Ms. Gol will contact right person and asked him to call back. 4:14 PM:– received call from Mr. Khouri. he mentioned that they are going to do soil borings west of B-6 and inside vault area and have to install SVE wells before weekend as crane will be installed this weekend. asked Mr. Khouri to submit revised SVE plan and work schedule for complete soil delineation north of sewer line.

11/05/09–Hiralkumar Patel. received email from Mr. Khouri (at 4:54 PM on 11/04/09) including site map with revised locations of SVE wells. instead of 7 wells, now Mr. Khouri propose 5 wells: four on street and one in vault area. spoke with Mr. Khouri about revised plan and asked him to send email with more clarification as previous email only contains site map with well locations.

2:49 PM:– received email from Mr. Khouri: As I mentioned, the existing configuration is more than adequate to treat the contamination in question. As described in our design drawing, The system is designed to have a radius of influence of 20 feet. This is based upon Langan's experience in similar sandy/fill formations. The air flow rate per well is significantly greater than the minimum of 500 pore volume exchanges typically needed to achieve soil cleanup in such locations. Indeed, we selected a robust blower system to assure that we can pull plenty of air flow through the subsurface (positive displacement blower capable of up over 10 inches of mercury vacuum and up to 200 scfm). Referring to our attached design drawing, note that we have carefully arranged the SVE wells so as to assure that the radii of influence overlap considerably in the central portion of the contaminated zone. We expect that this overlap of SVE radii of influence will result in enhanced pore volume exchange in this zone. Note also that we purposely skewed the SVE wells closer towards the sidewalk to enhance this overlapping effect, without sacrificing our ability to remediate towards the center of the street. Over the system operational period, we expect to manage our air flows so that as specific SVE well clean-up, we will in turn divert more air flow to the more recalcitrant wells, in essence increasing their effective ROI. So, if SVE-5 proves to be more recalcitrant than other wells, we will easily divert more air flow to this well.

11/09/09–Hiralkumar Patel. 8:30 AM:– received email from Mr. Khouri. they installed one boring west of B-6 on 11/05/09 to a final depth of 19 ft bgs, where refusal encountered due to bedrock. maximum PID of 4.9 ppm was encountered at about 16 ft bgs. two soil samples collected for analysis. on 11/06/09, installed SVE-4 (within B2) with screen interval between 10 to 20 ft bgs and SVE-3 (within B4) with screen interval between 8 to 18 ft bgs.

11/10/09–Hiralkumar Patel. visited site. met Smita from Langan. they were doing soil delineation across the street on sidewalk. when i reached there, one boring was completed and Smita collected soil samples. found highest PID at 16–18 ft depth. found petroleum odors in soil stockpiled near boring. found four SVE wells installed on street.

11/12/09–Hiralkumar Patel. 1:55 PM:– left message for Susan at Langan.

11/13/09–Hiralkumar Patel. 10:00 AM:– spoke with Susan. she got sample analyticals back for sample B-7 (west of B-6) and B-8 (sample across the street). as per Susan, no contamination found in B-7 and contamination in B-8 at 16–18 ft depth is similar to diesel/fuel oil and not related to gasoline. asked Susan to submit sample data and will discuss if any more sampling needed.

11/16/09–Hiralkumar Patel. received email from Susan (at 4:33 PM on 11/13/09) including results of soil borings B7 and B8. B7 was

installed west of B6 and B8 was installed in the sidewalk on the north side of W. 76th Street, directly across from previously drilled B1. total of two soil samples were collected from each boring. one from the most impacted zone (if present) and one from the soil/bedrock interface. no contamination found in soil samples from B7 and soil sample at 26–28 ft depth from boring B8. found some VOCs and one SVOC above limit and high GRO and DRO in soil sample at 16–18 ft from boring B8.

| | | | |
|---------------------------|-------------|--------------------------|--|

| GRO----- | 564,000 | DRO----- | 22,800,000 |

12/08/09–Hiralkumar Patel. 3:45 PM:– received remedial action work plan from Susan.

12/11/09–Hiralkumar Patel. discussed with DEC Austin. after reviewing available information, Austin asked to transfer case to DEC Vadim.

case transferred from DEC Patel to DEC Vadim.

12/15/2009: This spill case was transferred to A. Doronova. – AD The Remedial Action plan proposes installation of SVE system, which involves discharges to atmosphere. Called and spoke with Ms. Susan Bianchetti regarding Stipulation Agreement for the site. Asked her for contact person info. Gave my e-mail address. AD

12/16/2009: Received a phone call from Mr. Khouri of Langan. He asked for a meeting with DEC to discuss the RAP and Stipulation Agreement. AD

12/17/2009: Discussed time for meeting with J. Kolleeny of DEC. Scheduled the meeting for December 22, 2009. Called to Mr. Khouri and confirmed the meeting date. Mr. Khouri told me that the client's attorney would like to attend the meeting. AD

12/18/2009: Discussed this site with John Urda of DEC. He will attend the meeting as well. AD

12/22/2009: I, Jon Kolleeny and John Urda attended the meeting with Susan Bianchetti and Tarek Khouri of Langan Eng. and Steven Russo of Sive Paget & Riesel P.C. (client's attorney). The proposed RAP and need for Stipulation Agreement were discussed. It was agreed that Mr. Russo will explain to his client that signing the Stipulation Agreement is necessary for proceeding with the proposed course of remedial actions (SVE system). AD

01/06/2010: Contacted Susan Bianchetti of Langan Eng. and asked for a Respondent info for Stipulation Agreement. AD

01/07/2010: Received the Respondent contact info. Prepared the Stip with CAP. AD

01/08/2010: Forwarded Stip to J. Urda for review. AD

01/25/2010: Stipulation Agreement was signed by Respondent.

01/26/2010: The RAP does not have SVES data sheet, benzene concentration estimate and does not propose air sampling for

laboratory analysis. Discussed the RAP with J. Kolleeny of DEC. Confirmatory soil sampling is needed to evaluate effectiveness of the remediation. Contacted S. Bianchetti of Langan and requested to submit missing data. AD

02/17/2010: Received the requested information. Discussed it with J. Kolleeny of DEC. AD

02/18/2010: Issued an approval letter for the RAP with some modification regarding frequency of influent and effluent air sampling. DL e-copy to eDocs. AD

08/09/2010: Received an e-mail from:

Ms. Doronova,

Attached is our monthly progress report for the SVE system installed in accordance with the December 8, 2009 Remedial Action Work Plan. Let us know if you have any comments.

Thank you, Jason

Jason J. Hayes, LEEDAP Project Manager Direct: 212.479.5427 Mobile: 917.859.4908 Fax: 212.479.5444

Langan Engineering & Environmental Services Phone: 212.479.5427 Fax: 212.479.5444 360 West 31st Street, 8th Floor New York, NY 10001 www.langan.com

DL the report to eDocs. AD

09/07/2010: Received an e-mail from Veronica Tilgao:

Ms. Doronova,

Attached is our August 2010 monthly progress report (Progress Report No. 2) for the SVE system installed in accordance with the December 8, 2009 Remedial Action Work Plan.

Let us know if you have any comments. Thank you.

Veronica Tiglao, LEED AP Assistant Project Manager

Direct: 212.479.5492 Mobile: 646.957.0997

Langan Engineering & Environmental Services Phone: 212.479.5400 Fax: 212.479.5444 21 Penn Plaza 360 West 31st Street, 8th Floor New York, NY 10001-2727 www.langan.com

DL the report to eDocs. Will review. AD

10/19/2010: Received a phone call from Mr. Hayes of Langan. He told me that the SVE system operated on the site since June 2010, and that latest sampling results show VOCs vapor removal is reaching asymptotic levels. Also, construction requirements for the

TCO (installation of utility connection and construction of a new street and sidewalk) required the system to be removed. Mr. Hayes asked for permission to shut down the system. Discussed this with J. Kolley. Later talked with Mr. Hayes. Give him permission to shut down the system and requested to submit a brief work plan for confirmatory post-remediation soil sampling. AD

11/03/2010: Received an e-mail from Langan saying:

Hi Ainura,

As discussed during our October 20, 2010 telephone conversation, we have prepared the attached confirmatory (post-remedy) soil sampling plan for your review and approval. Let us know if you have questions or comments.

Thank you, Jason

Langan Engineering & Environmental Services Phone: 212.479.5427 Fax: 212.479.5444

DL to eDocs the soil sampling work plan. Will review. AD

11/09/2010: Reviewed the work plan. Langan proposes to collect 4 confirmatory soil samples from five locations with historically high levels of VOCs. AD

11/10/2010: Issued and sent an approval letter to Mr. Wolpert. DL the letter to eDocs. AD

03/03/2011: Received an e-mail from Jason:

Hi Ainura,

We plan to complete the endpoint soil sample borings for 2148 Broadway on March 12, 2011. Let me know if you have any questions or comments.

Regards,

Jason

Jason J. Hayes, LEEDAP

AD

05/23/2011: Received a Spill Closure Report submitted by Langan. DL only part of pdf copy of the report to eDocs due to its huge size (260 MB). Will require resubmit e-copy of the report. Will review. AD

06/28/2011: Reviewed the report. It stated that according to soil analytical results, VOCs were non-detect in all confirmatory post-remediation soil samples with the exception of one sample EB -04 collected at 11-13 feet below grade surface, which had elevated levels of xylenes and trimethylbenzene. Based on the remedial actions conducted and the lack of potential pathways of exposure, the consultant requested closure of the spill.

Summary of the remedial actions at the site:

11 USTs were removed and disposed off-site. The entire site was excavated to 40 feet below grade and 10 to 20 feet into bedrock. 20,653 tons of petroleum-contaminates soil were removed and disposed of site. A vapor-barrier was installed along the building's subsurface walls and floor slab. The SVE system was installed along the sidewalk and operated from June to October 2010, when it was shut down due to recovered vapors reaching asymptotic levels. 233.61 pounds of VOCs were extracted by the SVE system. The potential for impacts to human health are very low considering:

- 1) installation of a vapor barrier;
- 2) concrete cover over the entire site;
- 3) no exposed soil at the site property;
- 4) depth to groundwater at the site;
- 5) groundwater in the area of New York City is not a source of drinking water.

The residual subsurface petroleum impacts are expected to degrate over time through natural attenuation. Called and spoke with Mr. hayes of langan regarding resubmission of e-copy of the report. It will be submitted shortly. AD

06/29/2011: Discussed the closure of the spill with J. Kolleeny of DEC. Based on all data provided, the remedial actions performed and the lack of potential pathways of contamination exposure, it was decided to approve closure of the spill. Spill Closure letter will be issued when revised pdf copy of the closure report will be submitted to DEC. AD

07/07/2011: Received revised pdf copy of the report. DL it to eDocs. Case closed. AD

11/29/06–Vought–Contract Payment Package (National)–Biweekly VEFR, well monitoring and liquid disposal (08/01/06–09/30/06).

1/11/07–Vought–Spill transferred from DEC Vought to DEC Ketani as per DEC Austin due to recent property construction, destruction of DEC monitoring wells and need for review.

2/15/07 – Raphael Ketani. The initial spill was oil from a neighboring garage that passed through an adjoining wall and appeared on the slab below an elevator in the building next door.

The PBS case is #2–158518. There is a 10,000 gals. tank in service with #6 oil. The owners are listed as: The Opera Owners, Inc., 2166 Broadway, NY, 10024. Jay Tacooram is the contact at (212) 769–4151. Mail goes to: Lawrence Properties, 855 Avenue of the

Americas, NY, 10001. The contact there is Jack Terebelo at (212) 868-8320.

I reviewed the case file and found the following documents:

2/24/92: this letter is attached to a letter dated 10/3/97 from Materials Technologies. It is from Walters & Samuels and states that the garage plans to close the 5 550 gal. gasoline tanks. The reason for closure is that it isn't profitable to sell gasoline. The Sylvan Corp. (owners of the garage) believe the tanks are in good condition.

2/27/97: NY Testing Laboratories, Inc. oil sample analysis results. Attached is a 7/7/97 letter from Goldco Consulting stating they couldn't find any record of that there was ever any fuel oil storage at 207 W. 76 Street. Also, attached is a 6/9/97 cover letter with report from Phoenix Environmental to Alvin Petroleum Systems regarding the oil seep into their building's basement and an oil fingerprint analysis of the oil.

3/10/97: letter from Konner, Teitelbaum LLP (counsel to Opera Owners) to Champion Parking regarding oil seeping into the Opera Owners building, and determination that the oil originates from Budget Rent A Car.

7/7/97: letter from Goldco Consulting to Walter & Samuels at 419 Park Avenue stating that they did a Dept. of Buildings records search and could not find any evidence that the garage ever had fuel or oil storage tanks on site.

12/19/97: letter from PSI states that the oil is #6, but that it can not be determined where the oil is coming from due to the numerous sites that use oil in the area. The letter stated that the garage was not the source of the oil.

5/20/98: letter from Pedneault Associates, Inc. to Chris Tomasello of DEC stating that the sample of oil from MW-3 was analyzed and determined to be a mix of diesel fuel and motor oil.

5/20/98: letter from Pedneault Associates, Inc. to Chris Tomasello of DEC stating that the samples of oil from MW-1, MW-2 and MW-3 were analyzed and determined to be a heavy weight petroleum product - #5 or #6 oil.

5/25/98: letter from Pedneault Associates, Inc. to Chris Tomasello of DEC stating that the drill cuttings sample from MW-6 had 98 ppb bromomethane, 21 ppb naphthalene, and 245 ppb MTBE. The drill cuttings from MW-7 had 205 ppb MTBE.

12/29/98: letter from Pedneault Associates, Inc. to Chris Tomasello of DEC stating that the oil sample from MW-4 contained diesel range organics.

2001: report from Miller Environmental Group summing up the situation at the site and the fact that it could not be determined where the #6 oil had come from. They recommend injecting Biosolve to make the #6 oil more mobile and using absorbent socks.

7-9/2002: report from Miller Environmental Group stating that they are using absorbent socks to collect the oil as needed and that they tried to seal the elevator shaft wall in the building. However, the oil continued to seep through. They again recommended using Biosolve to reduce the viscosity of the oil and then vacuum collect it.

6/7/05: report from Miller Environmental Group for the period 9/02 to 2/05 stating that they recommend continuing the vacuum recovery of the oil/water mixture and enclosing hydrographs and groundwater flow maps. Groundwater is highest at MW-7 and they state that it flows southeast.

9/2005 (9/14/05): report from National Environmental Management status report for the period 3/05 to 7/05. It states that MW-1 to MW-4 are impacted by free product, with MW-3 being the most impacted. Hydrographs are enclosed that show the level of product.

2/23/06: analytical report from Severn Trent Laboratories for MW-4, MW-5, MW-6 and MW-7. All of the analytical results for VOCs came up non-detect.

National Environmental Management is the contractor for the long term. Their number is (631) 580-3191 and the contact is Greg Menegio at Enviroscience Consultants. I contacted Mr. Menegio and asked him whether he was familiar with the case. He said he wasn't, but he asked that I give him some time to do so and he will get back in touch next week. I told him that would be alright.

2/26/07-Vought-Contract Payment Package (National)-Monthly VEFR and well monitoring, project status report (10/1/06-11/30/06).

02/28/07-Vought-Contract Payment Package (STL)-Groundwater sample analysis (11/16/06-12/18/06).

3/8/07 - Raphael Ketani. The scheduled site visit with Mr. Menegio and his assistant took place today. His assistant showed me the wells that were installed in the sidewalk. She said that the only well with significant oil was MW-3. She said it was #6 oil. Mr. Menegio told me that the building was scheduled for demolition in the near future. I told him that maybe with the demolition and exposed subsoil, we will be able to see what is generating the oil. Otherwise, there was nothing to see at the site.

3/9/07 - Raphael Ketani. I sent a letter to Mr. Menegio stating that they should continue to do oil collection from MW-3 and once the building is demolished, then a soil investigation should take place.

3/14/07 - Raphael Ketani. I received the analytical results for groundwater samples taken from MW-6 and MW-7 on 2/14/07. MW-6 was completely non-detect. MW-7 had estimated hits for isopropylbenzene of 1.7 ppb and for N-propylbenzene of 1.2 ppb.

5/2/07 - Raphael Ketani. I received the Contractor Pay Packages for work on site that was done by National Environmental Management Associates Corp. The work period is from 12/1/06 to 1/31/07. Invoice number is #285. The work consisted of VEFR and monitoring the wells, use of low value equipment, VEFR trucks, sonic interface probe, supplies of gloves and hexane, and travel to site. The packages were found to be acceptable and were sent to Procurement.

I received the Contractor Pay Packages for work on site that was done by National Environmental Management Associates Corp. The work period is from 2/1/07 to 3/31/07. Invoice number is #323. The work consisted of VEFR and monitoring the wells, use of low value equipment, VEFR trucks, sonic interface probe, sample wells MW-6 and MW-7, supplies of gloves and hexane, travel to site, review files and consultation with DEC staff. The packages were found to be acceptable and were sent to Procurement.

5/3/07 - Raphael Ketani. I received the Contractor Pay Packages for work on site that was done by SEVERN TRENT Laboratories. The work period is from 2/21/07 to 3/6/07. Invoice number is #22021726. The work consisted of processing groundwater samples from MW-6 and MW-7. The packages were found to be acceptable and were sent to Procurement.

5/10/07 - Raphael Ketani. I received the Contractor Pay Packages for work on site that was done by SEVERN TRENT Laboratories. The work period is from 11/1/05 to 11/30/05. Invoice number is #42052661. The work consisted of processing groundwater samples from MW-5 to MW-7. The packages were found to be acceptable and were sent to Procurement. However, this pay package is out of sequence (submitted very late) with the others that have been processed. It was received by myself on the date at the upper left.

6/11/07 – Raphael Ketani. Mr. Menegio (631) 580–3191, ext 22(office)/(631) 905–4869(cell) e–mailed me today to state that the building next to the site had been torn down. He asked whether DEC wanted to investigate the site. I told him Yes, and to get the owners' name, phone number, and address.

6/21/07 – Raphael Ketani. I sent a Request for Entry letter to Amsterdam & 76TH, LLC, 60 Columbus Circle, NY, 10023–5802 for access to their property at 207–211 W. 76 Street.

6/29/07 – Raphael Ketani. Dave Yudelson, atty. (917) 295–6449 for Amsterdam & 76th LLC, called to say that oil is flowing out of the basement wall of the Opera Owners, Inc. building that is adjacent to his client's property. He asked that we meet at the site at 76th Street and Amersterdam Ave. at 2PM so that he can show me the problem. I told him that would be fine. I contacted Mr. Menegio and asked him to be there, also. He said he will.

Dave Yudelson (212) 421–2150/cell (917) 295–6449 is the attorney for the owners. He works for Sive Paget & Riesel, P.C., 460 Park Avenue, NY, 10022–1906.

Greg Menegio from National Environmental/Enviroscience and I met Mr. Yudelson at the site. The construction foreman and his assistant let us enter the site where the front of the garage use to be on West 76th Street. We saw that a very large area had been cleared of buildings. The area fronted not only on West 76th Street, but also on Amsterdam Avenue and West 77th Street. Two giant rock chiseling machines were working to break up the bedrock in the site. The bedrock was gneissic rock with some mica schist of the Hartland Formation. We were standing on a ledge about 25 feet above the existing excavation floor. Mr. Yudelson said that the excavation will be down to 40 feet. This ledge was adjacent to the corner of the Opera Owners building where Mr. Yudelson said oil had been pouring out of the corner of the building. He said they had collected a lot of the escaping oil. Mr. Yudelson commented that the blue tarp on the Opera Owners building's wall was there to cover some of the seeping. We could see a little oil leaking out of the wall towards the bottom and running down to the excavation floor. Some of the soil on the floor was contaminated with the oil. An excavator was used to expose more of the wall and more of the leaking oil. Eleven pictures were taken. Mr. Menegio didn't have any collecting equipment with him and there was no safe way to gain access to the floor of the excavation and see the leaks up close. So everyone agreed to revisit the site for sampling and a closer look on 7/3/07.

7/3/07 – Raphael Ketani. The field sampling event took place today. I was met on site by the following:

Dave Yudelson, attorney for the owners of the neighboring property Craig Puerta, ELM, engineer, consultant for Mr. Yudelson Scott, ELM, Mr. Puerta's assistant Greg Menegio, Enviroscience/National Environmental, PIN consultant for DEC Lori Mead, Enviroscience/National Environmental, Mr. Menegio's assistant

Mr. Yudelson pointed out dark stains on the below grade part of the wall of the Opera Owners building. He said he believed that the oil is from Opera Owners as there are only individual seepage stains on the wall and because the oil is flowing from the wall. I told him I wasn't so sure about that. I asked him about the large oil tank that was under the sidewalk in front of the former garage. He said it was removed and sent to a scrap yard. I asked him whether any oil was found between the tank and the garage. He said No. He said that the tank was removed because a strong foundation was needed at this location for the construction crane that will be placed here. I asked Mr. Menegio where some of his wells were. He said that MW–4 was in the basement of the garage in the corner where soil sampling will take place. He added that MW–3 is under the pile of lumber that is sitting where the crane will go. These two wells could not be sampled.

Oil was running out of the wall and the soil under the sidewalk at the southwest corner of the former garage location. Vapor levels were 44.1 ppm at the base of the wall just above the soil and 970 ppb where the oil was running out of the sidewalk soil. Mr. Menegio took split soil samples for himself (DEC) and Mr. Puerta. Mr. Menegio was using protective gloves and took samples S-2 and S-3 from about 5 feet above the pool of oily water that was collecting below in the corner. The samples were put into sterile, clean small glass jars and sealed immediately. Next, Lori and Mr. Menegio sampled the oil from MW-1 and MW-2. The oil was black, thick and about 8 inches in each well, despite the garage being torn down.

Next, we met Jay Tacooram, the super. of Opera Owners. He took us to the basement and the subbasement. We looked at the tank. There was a placard that stated the tank was installed in 2001. Jay said that he came on-board before the tank and fill pipe were replaced. He said that they were replaced in 2001 as part of a general refurbishing of the building shortly after it went co-op. He said that the oil seeping into his building is much improved since the garage was torn down. Lori took pictures of several oil seeps on the east wall of the tank room. There were several oil streaks on the east subbasement wall just outside the elevator. The streaks start at the level of the subbasement ceiling/basement floor. Jay showed us the oil streaks in the elevator shaft. These also started at the ceiling/floor level. All of the streaks appear to be at the same level as where the oil seeps on the outside brick wall start. Jay took us to the basement level. He showed us that this level is where the red brick sits on the lower larger blocks. Jay added that this is where the blue tarp covering other outside oil seeps is situated (these seeps were running at the time of the garage removal, but have since stopped – unlike the other lower, outside oil seeps). I didn't see any inside oil seeps at the basement level. With this, our meeting ended.

I told Mr. Menegio to run the soil samples for 8260 and 8270, and to run the oil samples for type of oil and age. He said he will do this. I also told him that the oil seeps in the Opera Owners building will have to be cleaned up and the wall repainted. Lori said this will be done. I asked Mr. Menegio when he will send the soil samples. He said later today. I asked him whether he had ice packs to preserve the samples. He said that he will get sufficient ice to pack the samples.

7/6/07 – Raphael Ketani. Craig Puerta of ELM e-mailed me that he sent his split samples to the labs.

7/9/07 – Raphael Ketani. Ms. Mead called me and said that she is arranging for a cleaning service to clean the walls at the Opera Owners building.

Later, she e-mailed that the cleaning will take place on July 12, 2007.

7/12/07 – Raphael Ketani. I received analytical results for groundwater samples that were taken from MW-6 and MW-7 on 6/22/07. The STL job number is #220-1965-1. The samples were run for method 8260 only. With the exception of isopropylbenzene at 1.6 ppb in the MW-6 sample, all of the results were at or below the MDL (essentially non-detect).

8/2/07 – Raphael Ketani. I received the Contractor Pay Packages for work on site that was done by MILRO Associates Inc. The work period is from 7/12/07 to 7/12/07. Invoice number is #28244. The work consisted of cleaning the basement and elevator shaft walls inside of Opera Owners, as per the instructions I gave Mr. Menegio on 7/3/07. The packages were found to be acceptable and were sent to Procurement.

8/3/07 – Raphael Ketani. I received the Contractor Pay Packages for analysis of groundwater samples by Severn Trent Laboratories. The work period is from 6/26/07 to 7/10/07. Invoice number is #22022752. The work consisted of analyzing 2 groundwater samples from MW-6 and MW-7 that were submitted by Greg Menegio of Environscience/National Environmental. The packages were found to be acceptable and were sent to Procurement.

8/8/07 – Raphael Ketani. I received analytical results for samples that were taken from S–1, S–2, S–3, and MW–1 on 7/3/07. The STL job number is #220–2060–1. The three soil samples were taken from the pit on the adjacent property and under the sidewalk, and the groundwater sample was of the oil floating in Well MW–1.

S–1 (at the base of the pit and Opera Owners wall) had only 2 low hits of n–propylbenzene and sec–butylbenzene with 8 very low SVOC hits.

S–2 (under the sidewalk) had 29000ppb naphthalene, 3900ppb n–butylbenzene, 1500ppb sec–butylbenzene, 3100ppb n–propylbenzene, 1100ppb isopropylbenzene, 1000ppb benzene, and from 1100ppb to 20,000ppb of the SVOCs naphthalene, acenaphthene, flourene, phenanthrene, anthracene, pyrene, benzo(a)anthracene and chrysene.

S–3 (also under the sidewalk) had 9 VOC hits from 320ppb to 24000ppb and 9 SVOC hits from 760ppb to 32,000ppb – most of which are non–benzo series analytes. These results are similar to those of S–2.

MW–1 (oil) is listed as one sample that was received and processed, but there are no analytical results on paper. The Chain of Custody form in the back shows that an oil sample was also taken from MW–2. However, this sample is not even listed as having been received. I called up Mr. Menegio (631) 580–3191 and asked him what happened to samples MW–1 and MW–2. He said the lab told him there wasn't enough product to do the type of oil analysis and the age analysis for each sample. However, when he went back to the site to collect more oil, he found that wells MW–1 and MW–2 had been destroyed. Mr. Menegio said he will talk to the lab and see if they managed to analyze the oil anyway.

I remembered Mr. Yudelson telling me that he will take out all of the soil under the sidewalk and the sidewalk itself. However, I thought he was not going to do this so soon as to interfere with the taking of samples from the wells in the near future.

8/20/07 – Raphael Ketani. I looked up the PBS for the garage that was next door to the site. Their PBS is #2–604789. It lists five 550 gallon tanks that had gasoline and were closed and removed. However, the large fuel oil tank was never registered.

8/21/07 – Raphael Ketani. I spoke to Mark Tibbe, Geological Technician III of Region 2 DER, Unit B, regarding the site and what he saw when he first inspected the Opera Owners' tank room in 1997. He said that the tank room is a giant vault which extends upward to just under the sidewalk. He said it's all open air and that the fill pipe is suspended in the air from the steel beams just below the sidewalk to the tank. He said the fill pipe connects to the tank directly and that he never saw any signs of leakage on the pipe or from the pipe. Mr. Tibbe added that the fill box is above the steel beams and is imbedded in the sidewalk. He said that he never saw any signs of leakage from the fill box. He stated that he never saw signs of leakage from the fuel tank and that the oil seeping through the tank room walls started high above the tank.

8/22/07 – Raphael Ketani. I finished reviewing the caserecord correspondence files for the site.

As a result of my review, I am submitting a Case Initiation Form.

8/24/07 – Raphael Ketani. I received the Contractor Pay Packages for work on site that was done by National Environmental Management Associates Corp. The work period is from 4/1/07 to 5/31/07. Invoice number is #390. The work consisted of VEFR and monitoring wells MW–1, MW–2, and MW–3, diposal of water and oil, use of low value equipment, VEFR trucks, maintenance of the VEFR trucks, sonic interface probe, supplies of gloves and hexane, travel to site, and tolls. The packages were found to be acceptable

and were sent to Procurement.

9/17/07 – Raphael Ketani. A Contractor's Payment Application package for Severn Trent Laboratories arrived in my absence. The work period is from 7/5/07 to 8/3/07. The invoice number is #22023027. The work consisted of processing soil samples S-1, S-2, and S-3, and processing groundwater samples from MW-1 and MW-2. The packages were found to be acceptable and were sent to Procurement.

10/1/07 – Raphael Ketani. I called Bonnie Ridgely (518) 474-6124 of the Albany AG's office and asked her whether her office had a case for the site. She asked whether it was a petroleum spill. I said it was. She said that her office handles the spills and they have not seen anything for Opera Owners.

10/4/07 – Raphael Ketani. Today I received an e-mail from Mr. Menegio with the soil analytical results and the oil typing and aging. The oil type is #6, but the lab was not able to determine the age of the product. Soil sample S-1 was below TAGM RSCOs, but samples S-2 and S-3 had several exceedences each. Both S-2 and S-3 (from below the sidewalk) had high exceedences for benzene, naphthalene, benzo(a)pyrene, and chrysene.

10/5/07 – Raphael Ketani. I spoke to Jay Tacomam, the super. for Opera Owners. He said he has had no problems with oil seeping through the walls since the garage and the soil under it were taken away. He said the elevator shaft and the sub-basement walls have remained clean.

10/20/07 – Raphael Ketani. I asked Mr. Menegio to have Ms. Mead swing by Opera Owners the next time she is in the area, and to look at the condition of the area where the wells are, or were, and to let me know what she sees. He said he will do this.

12/14/07 – Raphael Ketani. Mr. Menegio had contacted me on 8/8/07 regarding the status of the monitoring wells. He informed me that wells MW-1 and MW-2, which had recently been sampled, had been destroyed.

I am submitting the Final ISR for this PIN case to Randall Austin, Chief of the Spills Unit in Region 2, for his signature.

12/18/07 – Raphael Ketani. The FINAL ISR was signed by myself, Mr. Austin, and Lou Oliva, the Regional Attorney. It was then sent to Dennis Farrar of Albany Remediation. A penalty matrix was attached.

I sent a letter to Dave Yudelson asking him for the manifests for the contaminated soil and water removal.

1/8/08 – Raphael Ketani. Mr. Yudelson sent me an e-mail that he had the manifests for the soil that was removed from the location of the former garage.

1/9/08 – Raphael Ketani. A Violation Detail Sheet was sent to Dennis Farrar of Albany Remediation.

1/14/08 – Raphael Ketani. I received the Contractor Pay Packages for work on site that was done by National Environmental Management Associates Corp. The work period is from 6/1/07 to 7/31/07. Invoice number is #475. The work consisted of researching project history as directed by DEC, quarterly groundwater sampling of MW-6 and 7, site visit with DEC and neighboring property's attorney, phone conference with DEC, site visit with DEC and neighboring property's attorney with inspection of elevator shaft at site and collection of soil and water samples, gauge wells, final site visit to assess conditions of wells. The packages were found to be acceptable and were sent to Procurement.

1/29/08 – Raphael Ketani. I received the Contractor Pay Packages for work performed by National Environmental Management Associates Corp. The work period is from 8/1/07 to 9/30/07. Invoice number is #556. The work consisted of preparation for writing and writing the bi-annual site status monitoring report. The packages were found to be acceptable and were sent to Procurement.

2/7/08 – Raphael Ketani. I received the Contractor Pay Packages for work performed by National Environmental Management Associates Corp. The work period is from 10/1/07 to 1/31/08. Invoice number is #614. The work consisted of reviewing the well fluid level results and preparing summary tables, a site inspection for well damage and the taking of photographs, and conference calls between National Environmental and NYSDEC. The packages were found to be acceptable and were sent to Procurement.

2/15/08 – Raphael Ketani. Mr. Yudelson had told me in the recent past (about 3 months ago) that the construction crew had removed the large fuel tank under the sidewalk, and had removed the soil surrounding the groundwater monitoring wells that had been installed. The destruction of the monitoring wells had been confirmed by the consultants from National Environmental. Documentation of the oil contamination has been produced (via measurements of free product in the wells, pictures of the oil seeping through the basement walls at Opera Owners, and soil samples that were taken in 2007). Opera Owners has remained clean since the demolition of the garage. In my best determination, there is nothing left to sample or investigate at the site or the former garage site and the spill has been remediated. The Division of Legal Affairs in Albany and the Attorney General's office will pursue the legal settlement.

Based upon the above reasons, I am closing the spill case.

2/25/08 – Raphael Ketani. Mr. Yudelson e-mailed me that he is sending the manifests for the soil that was removed at the former garage site.

2/26/08 – Raphael Ketani. I received the thick package of soil manifests from Mr. Yudelson. I gave them to Paul, the Spills mail/E-docing clerk, to be scanned into the database.

8/13/08 – Raphael Ketani. Sue Zeun from the Attorney General's office called to request a copy of all of the E-docs on disc. She said that the case is going to court on September 9, 2008.

Sue contacted Robert Leung of the Unit C of Region 2 DER and he transferred copies of all of the E-docs to disc and mailed the disc to her today.

8/22/08 – Raphael Ketani. I researched some background information that may be helpful regarding the case. The garage address is 207-211 W. 76. There were 5 USTs. All had gas and all were closed in place on 2/1/92. From the case notes, the tanks were removed about 5/2007, when the building was demolished. The PBS is #2-604789.

According to Property Shark, Opera Owners primary address is 2162 Broadway. The building spans the addresses from 2162 to 2168. The block and lot are 1168 and 22. An alternate address is 213 W. 76 Street.

3/20/09 – Raphael Ketani. Mr. Yudelson called inquiring about the status of the spill case. I told him that the case had been closed some time ago in 2008. I told him the PIN was still open as the OAG was still pursuing the case. He said he knew as the owners of the former garage were being sued.

7/29/15 – Raphael Ketani. Dan Schlesinger (518) 776-2206 of the Albany AOG is the new attorney for the PIN case.

Caller Remarks:

CON ED #121956 – 15 GALLONS FOUND IN TRANSFORMER VAULT – SPILL CONTAINED AND WILL BE CLEANED UP BY CON ED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT

12/15/98: ERT Shah – occurred at 9 AM. There is sump pit but pump was not operating at time of arrival. No sewers/waterways. Has been sampled. Flush truck on location, going to do pressure test.

On location at 1245 hrs – there is sediment in vault. Sump filled with oil <5 gallons. Transformer oil level at min operation leve ~30-50 gallons missing. Max volume 392 gallons. Found bottom leak. Upon inspecting inside of plumbing from sump found oily residue inside pipe so probably got to sewer. Historic PBC concentration 14 ppm. Treating cleanup as 50-499 until lab results come back. Going to do initial cleanup – drain, remove, reclean, replace. (CAE)

~~~~~ E2MIS 121956

12/15/98 10:11 O.S. FLUSH FRANK SANTARPIA REPORTS SPILL OF APPROX 15 GALLONS OF OIL WAS FOUND IN V3716 LOCATED AT 27 W 72 ST.

SPILL WAS FOUND BY KEN SELL(#53414) FROM THE FLUSH DEPT AT 09:00 HRS ON 12/15/98 AND REPORTED TO MCHUGH IN THE CONTROL CENTER AT 10:11 HRS ON 12/15/98. SPILL HAS ENTERED THE SUMP PIT OF THE VAULT BUT THE PUMP WAS NOT OPERATING AT TIME OF ARRIVAL. THE PUMP WAS UNPLUGGED UPON DISCOVERY. THE SPILL IS CONTAINED AT THIS TIME. SANTARPIA REPORTS THERE WAS NO RELEASE TO ANY SEWERS OR WATERWAYS. HE REQUESTS AND I&A CREW TO LOCATION TO DISMANTLE SUMP PUMP PIPING TO VERIFY THAT NO OIL WAS PUMPED. A SAMPLE WAS TAKEN AND A SPILL TAG #21894 WAS INSTALLED. THE FLUSH CREW WAS ON LOCATION TO CLEAN THE STRUCTURE. THE I&A CREW WILL ALSO PRESURE TEST TRANSFORMER TO DETERMINE IF IT IS LEAKING.

12/15/98 11:02 R.MOCKLER(OS I&A) REPORTS BOTTOM LEAK FROM TRANSFORMER IN V3716 17M83 LOCATED 27 W 72 ST. REQUESTS FDR OFF OOE CAT ONE. FDR CUT OUT AT 11:07 ON 12/15/98.

12/15/98 13:10 MOCKLER REPORTS DISMANTLED SUMP PUMP PIPING AND HAVE SIGNS OF OIL IN PIPING. IT IS ESTIMATED THAT 50 GALLON SPILLED FROM TRANSFORMER AND APPROX 40 GALLONS ENTERED THE SEWER. HAVE DEC CHRIS ENGELHARDT ON LOCATION.

12/15/98 1705 HRS RESULTS OF LAB ANALYSIS 98-13949: PCB: 9 PPM; AROCLOR 1260

12/16/98 12:15 PM S. Baldwin of NYC DEP on location. He was advised of cleanup activity. 13:30 PM Partial cleanup of structure begins treating all debris as >50 PPM. 15:00 PM Partial cleanup complete Two solid drums of waste picked up by Astoria transportation. 17:55 PM Crew drains transformer and installs oil boom in front of unit. Final cleanup pending removal of unit. Scaffold over vault.

On 6/16/99 at 18:30 I&A removed 3600 gallons of water and oil from vault with Astoria tanker.

On 6/17/99 I&A completed cleanup of structure. Removed two solid waste drums of debris, returned to E 110 St. yard for disposal. All other debris removed by Vactor truck. Degreasing agent Bio-Gen 760 used.Spill tag #21894 removed job complete.

Update: A new transformer was installed 6/25/1999.

**Caller Remarks:**

caller believe oil from funeral home tank is leaking and going into his building

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was M TIBBE

Transferred to T Knizek – 6/21/06

9/7/06 – Austin – Assigned from Albany to Region 2 staff (Ketani) for review and closure – end

10/6/06 – Raphael Ketani. The caller stated that he believed oil from a funeral home tank was going into his building. The contact is Norman Silver of Walter & Samuels (management company), (212) 696-7134.

I called up Mr. Silver and he said that, to the best of his memory, 500 gals. were released. He said that the rusted bottom of the tank dropped out. The repair/cleanup people came, the area was cleaned, the tank replaced, and all of the paperwork was submitted to DEC. He said the case was closed. He said that the paperwork is now with the successor management company, Cooper Square Realty (212) 634-8940. He said the contact person is Susan Turner. I tried calling Ms. Turner, but could only leave a

message. However, her phone system stated that Gaitri Patel was her assistant and that she could be contacted. I called Ms. Patel (212) 634-8928 and discussed the need for paperwork to close the case. She said she and Ms. Turner will try to get me what I need.

10/11/06 – Raphael Ketani. Ms. Turner called me back. She said she looked for records regarding the cleanup of the oil spill at the site among the records that Mr. Silver forwarded to her, but found nothing. She asked me what I had. I told her I didn't have a paper file. She asked why I was inquiring about this old spill at this time. I explained to her that this was a case transferred down from our Albany office for investigation and closure. I told her that Mr. Silver and her were my only leads. I asked her whether there were any odors in the basement where the spill occurred and whether there was any indication that a spill happened. She said that there are no odors and the building's basement is absolutely clean. Ms. Turner said that they clean things quickly at this building. She said she will look for the records again, but couldn't promise me anything. I told her I appreciated the efforts she was making.

10/16/06 – Raphael Ketani. I tried calling Ms. Turner, but could only leave a voice mail.

10/17/06 – Raphael Ketani. I made an unannounced site visit today. I met Mr. Fernando Gomez, the super. He showed me the boiler room and the tank room. The east wall of the boiler room had numerous stains on it. There were 2 holes about 5 feet above the floor and numerous small holes with long stains at various heights above the floor. There appeared to be a brown spongy substance in the narrow water drainage trench that runs along the base of the wall. However, there were no oil odors. The stains, Mr. Gomez said, were from when sealants were pumped through the wall in order to stop oil from seeping in from the neighboring building, 117 W. 72 Street. According to spill case #9712410, a fill line broke under the sidewalk and oil flowed through the soil and exited through the wall. The spill was contained and the case closed. However, the stains persist.

I inspected the tank and the lines and took several pictures. The tank and lines looked new. I asked Mr. Gomez when the tank had been replaced. He said the bottom of the tank dropped out on 6/14/94 and the tank was replaced on 12/8/94. (This does not match the case spill dates of 8/27/99 for the same type of incident.)

However, based upon the cleanliness of the boiler and the tank rooms, the lack of oil odors, the apparent newness of the tank and lines, and the lack of paperwork and the lack of knowledge of who cleaned up the spill, according to Ms. Turner, I am closing the spill case.

**Caller Remarks:**

FOUND OIL IN EXCAVATION OF ELEVATOR PIT – IN BASEMENT – CHRIS TOMASELLO WAS NOTIFIED ~1310 HRS.No penalty recommended as spill from unknown source and hence no responsible party to assign violations.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was DEMEO 5/10/04 – AUSTIN – TRANSFERRED FROM TOMASELLO TO DEMEO – END

8/23/05 – Raphael Ketani. Case transferred to Jeff Vought.

7/23/09– Complete File review by Intern E.M Ibeh and DEC JB Vought.

**Closed Spill #.**

0601671– 79th St and Broadway– Motor oil spill by NYC Transit. 6.00G spilled and 6.00G recovered. Spill cleaned up by Transit thus spill closed on 5/16/06.

0703767– 79–01 Broadway, Elmhurst–“Old oil tank was removed and soil contamination was discovered from #2 fuel oil”. Spill closed 10/2/07 due to soil analyticals in the closure report.

No PBS records were found for the property.

The file being reviewed is SP# 9306013, PIN# 93250, 2222 Broadway, NY. Spill date 8/9/93.

8/16/93– Written personal notes stating the address as 22–22 Broadway– NE corner of 79th and Broadway and building as a 2 story wood retail store. Mike Gallin of John Gallin & Sons (P. 212–267–8624) was the caller and he explained that they were digging for piston to extend elevator when they discovered pit filled with oil. Owner is listed as:

Lori Zee 22–70 Broadway 212.787.7739

Undated personal notes from C. Tomasello to M. Tibbe stating that a ‘Filene’s Basement’ was to be built there and contractors were digging a pit for piston of elevator when they hit product. C.Tomasello wrote that he spoke to the rep from Filenes the previous day who said he wanted to get a contractor to pump pit and oil out and into drums. Tomasello agreed but said not to move product until a sample was taken and asked for the place and area to be checked for sources.

8/20/93– Letter from Pedneault Associates, Inc to Fenley and Nicol Co, Inc regarding Filenes–222 Broadway–79th St. subway, Manhattan, NY: Stating that a sample was taken on 8/19 from the above location and was analyzed for fingerprint identification which showed this sample to contain fuel oil.

8/25/93– Letter from NYSDEC to Mr. Luft of Lori Zee Corp, 22–70 Broadway, NY 10023 regarding 2222 Broadway, Manhattan: Stating that the NYSDEC is investigating and/or remediating a petroleum spill which occurred on or near the above–mentioned premises and that the Department will expend State funds to perform this project whilst attempting to determine a responsible party. It also states specific work to be performed on the site viz a) temporary system to de–water the area of the elevator pit, allowing instillation work to be completed, b) groundwater investigation, including well installations, c) permanent recovery system to be installed later at the site. A copy of section 178 Right to Enter and Inspect was attached to the letter.

8/30/93– Letter from Lori–Zee Corp to Mr. Brian Bootay, Filene’s Basement Corp, 40 Walnut St, Wellesley, MA 02181: Confirming the presence of liquid discovered in basement during excavation of cellar pit and stated that as a matter of precaution, he had sent sample of liquid to laboratory for testing and advised Mr. Bootay to do same. He requested entry permission and enclosed Right to enter letter from DEC dated 8/25.

10/29/93– Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as weekly for 2 months. 0.00G of product bailed and total recovered but well #1 contained a film of floating product (FP).

11/24/93– Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as weekly for 2 months. 0.00G of product bailed and total recovered but well #1 contained a film of FP.

12/29/93: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as weekly for 2 months. 0.00G of product bailed and total recovered but well #1 contained a film of FP.

12/30/93: Personal notes from C.Tomasello: Stating that K. Blumberg of F&N was installing sump pit and separator at the site

^next week^.

1/28/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as weekly for 2 months. 0.00G of product bailed and total recovered. No FP detected.

2/4/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as weekly for 2 months. Its comments list wells as `OK`.

3/29/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as weekly for 2 months. Its comments list wells as `OK`.

4/22/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as weekly for 2 months. 0.00G of product bailed and total recovered.

5/6/94: Report from F&N to M.Tibbe of DEC stating that F&N reviewed file for possible closure as requested because no FP had ever been recovered. Summarized was the spill case from inception and stated was 523gallons of liquid (478gal.water and 45gal. oil) that F&N removed from the excavated area, when oil spill was reported, via vacuum truck. It also stated that F&N returned to the site in 9/93 and removed ~1400gallons of all liquids consisting of water and oil, using a vacuum truck and following this work, the DEC proceeded with installation of a minor recovery system consisting of a sump pump and oil/water separator. Attached were monitoring reports and a Site Schematic of the System.

5/13/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as monthly, 0.00G of product bailed during visit and wells listed as `OK`.

6/10/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring sch-edule as monthly. 0.00G of product bailed and total recovered and no FP detected.

7/20/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as monthly. 0.00G of product bailed and total recovered and no FP detected.

8/12/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as monthly. 0.00G of product bailed and total recovered and no FP detected.

9/23/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as monthly. 0.00G of product bailed and total recovered and no FP detected.

10/13/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as monthly. 0.00G of product bailed and total recovered and no FP detected.

11/21/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring /chedule as monthly. 0.00G of product bailed and total recovered and no FP/detected.

12/8/94: Monitoring report from Fenley&Nicol Environmental to DEC: Stating monitoring schedule as monthly. 0.00G of product bailed and total recovered and no FP detected.

2/2/95: ISR stating clean-up of Filene's Basement as completed on 1/27/95.

7/29/09- As per Tibbe, the driller was nervous to drill in the basement as the foundation was unstable and no free product was discovered.

7/30/09- As per Bechard of the NYSOAG, there was no information regarding SP# nor case settlement by the OAG.

8/13/09- Vought called Filene's Basement and spoke to Mike Brown(212-873-8000), the manager, who said to sent letter requesting visit to property to inspect elevator shaft and basement.

08/18/09-Vought-Spoke to DEC Farrar and as Att. Gen. Close Date box is filled out in UIS, no Final ISR needed.

09/14/09-Vought-Called Brown to inform him that letter was drafted and being sent in mail and also via fax machine.

09/16/09-Vought-Performed site visit and met Brown onsite. Vought inspected elevator pit and no signs of seepage via visual and olfactory evidence. Vought also inspected rear stockrooms of site and noticed no seepage, no staining, no odors. Site is currently using natural gas. No recovery system onsite. Vought to discuss spill closure with DEC Austin.

1/4/09-Vought-Discussed spill closure with DEC Austin and spill closed due to no signs of petroleum seepage during site visit and lack of free product as per notes above dated 5/13/94-12/8/94. Due to store, basement was significantly developed from prior use during spill.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was KOLLEENY

05/23/05: This spill transferred from J. Kolleeny to A. Zhitomirsky, who is now DEC case manager for the site. – JK

Pump and treat system is treating site contaminants since July 2004. AZ

9/20/2006 Reviewed system monitoring report submitted by URS and dated 8/23/2006. Pump and treat system is collecting contaminants. URS recommended continuation of the system operation because of exceedances in contaminant concentrations measured during last monitoring event. AZ

8-17-2007 An e-mail was sent to URS: I have reviewed request for revised remedial strategy submitted by URS and dated 5/30/2007. In April 2007 groundwater samples were collected. EW-02 was flooded, EW-03 and MW-08 were under a dumpster, EW-04 appears to have been paved over. URS stated that the plume is essentially contained within the property boundary. Existing VOC

concentrations are not effectively treated by chemical oxidation injections or oxygen source injections. URS recommended monitored natural attenuation for this site. DEC concurred with URS's proposals. However, wells which have not been sampled should be sampled and repaired if needed. AZ

3-5-2009 An e-mail was sent to J. Staten/DDC/V. Brevdo: The above spill is associated with this site. The spill report indicated that soil contaminated with #2 fuel was encountered. This spill should be investigated. This spill number should be indicated on all submittals related to this spill/site. AZ

3-6-09 The PBS # for the NYCDPR 86th Street Transverse site is 2-600308. According to PBS the site has active 7,500 gal heating oil tank. Info received from Jane Staten: According to the Investigation Summary and Remedial Plan (ISRP) prepared by Raritan Enviro Services, Inc. (RES) in 1996: During the upgrade of USTs 1 and 2, petroleum soil contamination was found near the heating oil tank (UST 3). This was reported to the NYSDEC on April 16, 1996 and assigned spill # 9600735. AZ

3-9-2009 An e-mail was sent to J. Staten: I have reviewed the submitted materials. They confirm that during the upgrade of USTs 1 and 2, petroleum soil contamination was found near the heating oil tank (UST 3). This was reported to the NYSDEC on April 16, 1996 and assigned spill # 9600735. Since that time no contaminated soil was removed or treated from the heating oil tank area. Moreover, persistent groundwater contamination might be explained by still present source (soil contamination). At this point, URS should sample soil and address soil contamination in the heating oil tank area. AZ

7-15-09 An e-mail was sent to Jane Staten and DDC: I reviewed this case. In order to close this spill (or address it) we'll need to advance soil borings. As per our standard procedure, URS should propose soil boring locations and DEC will review them. AZ

3-2-2010 Reviewed and approved Soil Investigation WP. an e-mail was sent to J. Staten: I have reviewed Soil Investigation Work Plan for this site. The plan is approved. If groundwater is encountered, groundwater monitoring wells should be installed, developed and sampled. AZ

2-18-2011 Reviewed Groundwater monitoring report for the second quarter 2010 and soil sampling results dated Aug.30, 2010 and submitted to DEC at the meeting on 2-17-2011. According to the report the spill#9600735 was assigned on April 16, 1996, due to the presence of petroleum contamination found near the 7,500\_gallon heating oil tank during the upgrade of the two gasoline USTs. The heating oil UST passed tightness testing in February 2000 and again in February 2005. URS requested closure of the spill #9600735. In response DEC requested an additional soil sampling to confirm absence of soil contamination. The sampling was performed in June 2010. There were no exceedances of TAGM guidelines. Based on the above information spill#9600735 is closed. The remaining groundwater contamination will be tracked under spill#9502313. AZ

The following e-mail was sent to K. Shenahan(URS), M. Asbagh (DDC) and V. Brevdo: Dear Kevin,

I have reviewed Groundwater monitoring report for the above site for the second quarter 2010 and soil sampling results dated Aug.30, 2010 and submitted to DEC at the meeting on 2-17-2011. According to the report the spill#9600735 was assigned on April 16, 1996, due to the presence of petroleum contamination found near the 7,500 gallon heating oil tank during the upgrade of the two gasoline USTs.

The heating oil UST passed tightness testing in February 2000 and again in February 2005. URS requested closure of the spill #9600735. In response DEC requested an additional soil sampling to confirm absence of soil contamination. The sampling was performed in June 2010. There were no exceedances of TAGM guidelines. Based on the above information spill#9600735 is closed. The

remaining groundwater contamination will be tracked under spill #9502313. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: 1. The off-site migration of petroleum contaminants that was unknown at the time of this closure; 2. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure; 3. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or 4. Fraud committed in obtaining this spill closure determination. Sincerely, AZ

**Caller Remarks:**

Clean up is pending company resources. NRC # 908658

**DEC Investigator Remarks:**

DECPiper received call off hours. 50 gal of #6 oil ound in service box. AS con Ed does not use #6 oil in service boxes, it is believed to be coming from a local source. The service box is in front of 235-41 W. 76th St. PBS # 2-047295 Piper received e-mail from David Grossman, property mgr on PBS form.

NY Heating will inspect the fill line. I believe that the oil observed in the Con Edison vault is related to an oil spill January 29, 2009. The oil spilled onto the public sidewalk. Approved Oil, our oil delivery company, hired Petroleum Tank Cleaners, a registered contractor to clean the oil spill. The spill was assigned # 0811804.

7/23/09 – Austin – Spill in vault cleaned up by Con Ed – see EMIS in eDocs – closed this spill, referred to #0811804, a 3rd party spill. – end

Caller Remarks:

CALLER STATES HER COMPANY WAS DIGGING FOOTINGS YESTERDAY AND CONTAMINATION WAS FOUND IN THE DIRT – THERE IS A HISTORY OF A SPILL NEXT TO THE SITE BACK IN 1995-96 / NO REMEDIATION HAS BEEN STARTED AT THIS TIME, THEY ARE REQUESTING A CALLBACK FROM DEC

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SAWYER 10/31/03 TJD

Site was formerly a PIN job (spill #9108119 PIN#91283). Caller reports unknown petroleum seeping into excavation from saturated soils. Material suspected to be emanating from 241 West 75th St. Sawyer performed site visit.

Contact information: Martha Goupit: Management agent Caran Properties 150 E 58th Street 27th Floor NY, NY 10155 Cell:(917)974-8151

Building Super: Ricky Koakaj Pager: (917)738-8228 Phone: (212)595-4620

Front desk @235 W75th St. 212 787 3407

10/31/03 1430 Hrs – Sawyer – Performed sight visit but was not able to confirm that the source was next door again. Steve Kirchner of Kay Equities (917)912-0099 241 W 75th was persistent that his tank was not the cause this time. Two passing tank system test later, he may be right.

11/4/03 1030 Hrs – Sawyer – I let Ricky and their insurance agent that we could not pinpoint the origin. 12/16/05- DEC Piper

left message w/ Martha Goupit, requesting callback. 3/8/06– DEC Piper left message w/ Martha Goupit, requesting callback. 3/9/06– DEC Piper received e-mail and summary report/letter. AS per report, during Oct. 2003 footing work, free floating product discovered on groundwater. Test show oil is a match for adjacent property. Sp#9108119. Spill referred to remediation. Re-assigned to K. Tang.

3/21/06 – Spoke to Bryan DeVaux of P.W Grosser. He observed the floating product in a 2’x2’ excavation, and it was only about 1/4 thick. The oil looks very weathered. The area is now backfilled. Spoke to PM of the PIN cleanup (spill # 9108119) at this site and the source next store. He said that there is going to be a layer of contaminated soil trapped underground and whenever it is disturbed, it will release some oil to the water table. The PIN job has recovered as much oil as possible before closure in 1998. Since this residual contamination is not causing any odor complaint, and it does not appear to have any significant impact to the environment or the public health, NFA can be issued and spill closed. – KSR

**Caller Remarks:**

ODOR OF OIL COMING FROM BASEMENT. REQ CONTACT FROM DEC.

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

12/1/99 Sangesland made an inspection of the site. Tank in basement room looks old with oil staining visible. Fans are used to vent out the oil smell in the basement.  
 A 30 day notice was sent to the manager  
 Pride Property Management Corp  
 11 New St  
 Engelwood Cliffs, NJ 07632  
 Attn: Alex Kuffel - Manager

Fax 201-567-1960  
Phone 212-690-0800

30 Day notice said:

- 1) Do a tank test (1/11/200 call said tank past test after minor repairs)
- 2) Clean the tank room & epoxy paint the room
- 3) Updated PBS form should be posted

1/11/2000 Sangesland received letter from Pride Management including:

- 1) Letter from Aggressive Heating Inc (12/21/99) saying tank tightness testing report shows tank is OK.
- 2) Copy of Horner EZ test done by Bernard Bauer of New York City Tank Testing Inc. (Cert #642329) 1624 Webster Ave Bronx. Test done on 12/14/1999.
- 3) Aggressive Heating replaced manhole gasket, replaced oil return line. Tank is Not on saddles

Tank capacity 5000 gal

2/22/2000 call from Kristen Summers saying smell in her apartment is still there. Tank room has not been cleaned and walls have not been epoxy painted. Sangesland called Pride Management and left a message with Mr. Kuffel to follow up on cleaning & painting and return call.

3/19/2001 – Kristen Summers called again saying the smell is coming back up into her apartment. New contact person at Pride Management is Ben Celaj. Sangesland left a message for Ben Celaj to call Sangesland to discuss the problem.

Caller Remarks:

An unknown caller reported to DEP above spill. Nothing further other than it is supposed to be in the street and oil is going into the catch basin.

DEC Investigator Remarks:

10/07/08–Hiralkumar Patel. visited site. found oil on sidewalk. met cleanup crew from Enterprise Transportation, who delivered oil at the building. crew was cleaning up oil on sidewalk. oil spilled from a vent pipe, as a result of overfill, on sidewalk and some oil entered into trap door on sidewalk. so oil was also found on steps to basement. found drain at the bottom of steps. found minor oil in the drain. found oil in tree area in front of 148 W 72nd street building. found petroleum odors inside Domino Pizza place at the building.

spoke with Peter, building super. site has one 5000 gal #4 oil AST, sitting on broken floor. as per Peter, Enterprise delivered oil at about 7 AM and as driver noticed spill, oil company sent crew for cleanup. he noticed oil spill lateron. 5000 gal tank delivers oil to buildings from 140 to 148 W 72nd Street.

inspected tank room. no sign of overfill from tank. all lines runs aboveground except part of fill and vent lines that runs under sidewalk. vent line is located along building foundation wall. fill and vent line enters into basement via an old coal chute. found oil spill in this coal chute and then ran along tank room wall for about 15 ft to tank room floor. tank room floor is in bad shape. found contaminated soil in area below entrance of fill/vent line. found leak at elbow in fill line, which is outside of coal chute area. found abandoned 275 gal AST in tank room corner.

spoke with Carmine at Enterprise. they delivered oil for Hess. Enterprise took responsibility and has called his insurance company AIG. as per Carmine, AIG hired Envirotrac for cleanup. spoke with Ted at Envirotrac. asked him to cleanup spill from sidewalk, tree area in front of the building, steps to basement and also inside tank room. after this, asked him to test entire tank system before any further work.

met Eric from Hess.

as per super, tank had about 2400 gal oil in it and he ordered 2000 gal oil. as per delivery ticket, driver delivered 1742 gal when oil came out from vent. gauge might not be working properly.

received call from Rene Lewis. he has been hired by property manager as fill line might be leaking. Rene mentioned that he met

Andrew Kelly from DEP who came to inspect drain at the end of basement steps. as per Rene, Andrew found no oil in drain and no violation has issued.

\*\*delivery company\*\* 142 2nd Street Brooklyn, NY 11231 Attn.: Carmine Salcone Ph. (718) 596-4477 Fax (718) 596-0683

10/08/08-Hiralkumar Patel. spoke with Mr. ATkin. he mentioned that contractor is cleaning inside tank room and will do tank test today. asked Mr. Atkin to provide tank test result by end of today.

11/06/08-Hiralkumar Patel. left message for Mr. Atkin to submit documents by end of tomorrow (11/07/08).

spoke with Rene. he mentioned that he removed about 2 ft deep soil from tank room area and during tank test found vent line leaking. he replaced vent line and tested tank again. tank passed second test after vent pipe replacement. Rene mentioned that property manager's environmental contractor will collect endpoint samples.

Kenneth Friedman Shaindel environmental inc. Ph. (914) 762-2296 Fax (914) 727-1139 email: secikf@optonline.ne

11/14/08-Hiralkumar Patel. received email from Mr. Friedman from Shaindel environmental with spill closure report. abstract:

- exterior spill from vent pipe was cleaned out by Envirotrac - AST passed tank test - one endpoint soil sample was collected at 6-12 inches below excavation bottom inside tank room

but report missing following:

– scaled site map including locations of entire tank system, spill areas, excavation and endpoint sample – final dimensions of excavation

sent email to Mr. Atkins requiring submission of above missing information alongwith color photographs of spill areas after cleanup.

11/17/08–Hiralkumar Patel. received email from Ken with photographs and unscaled site map. according to site map, they excavated 5 ft by 6 ft area in tank room, near foundation wall where fill line/vent line cross the foundation wall.

11/24/08–Hiralkumar Patel. visited site to confirm cleanup. inspected tank room. contaminated soil removed, but some stained soil in place. no odors inside tank room. observed soil stain on foundation wall under vent pipe location. no more oil coming out from vent pipe area. spoke with super. they replaced vent pipe. old vent pipe was crossing sidewalk concrete and thats only part was invisible.

observed active fill port/vent pipe for 275 gal AST inside tank room. asked super to seal fill port for 275 gal tank.

based on submitted report and observation during site visit, case closed.

no fire,smoke,or private property,no sewers.oil spilled onto 200 gallons of water.con ed spill #-154725

**DEC Investigator Remarks:** NOTE: These remarks are shorter than in the previously tracked spill

e2mis 154725:

16 gallons of unknown oil and 200 gallons of water in service box SB12896. Allstate PowerVac was in the process of flushing the service box removing cement and dirt when the top layer of dirt fell into the service box revealing the oil and water below. They immediately stopped their work, but believe that some oil has entered their truck and contaminated it. Cleanup is pending lab results.

EH&S rep called to report that he spoke to the crew, crew supervisor & Allstate personell on site & they reported that it is not 16 gallons of oil that was initially reported but only 2 gallons of oil.

15:00 hrs. the cleanup was completed by Allstate PowerVac. The following solid debris was removed from the structure: 7 pieces of 3 ft. 2x4 wood, concrete, black top, dirt, toothbrush, spoon and other items. The vendor used Enviro-Prep solution as required to address any lead issue. 40 gallons of oil & water mix was removed. The structure was double washed and rinsed with Citrus Cleaner.

Lab Sequence Number: 04-06192-001: PCBs < 1 ppm

Lab Sequence Number: 04-06193-001: Analysis indicates the presence of a substance similar to a light fuel oil.

---

**DEC Investigator Remarks:**

8/15/05 – Haggerty – spoke with Mrs. Ross, property manager, she has no records dating back that far. All other contact info outdated ----site visit

12/19/2005: This is a multi storied building. According to the callers remark, site visit may help to close the spill. (Sadique)

01/20/2006: John Grathwol and I visited the spill location on 01/18/2006 at 11:00am. This building has two other addresses: 2211 Broadway, NY and 390 West End Associates, NY.

Walked around the building. Took photo of vent pipe. Met with Building Asstt Superintendent Mr. Frank Rodriguez. He took us to the basement. Inspected the boiler room and tank area. Huge tank (20,000 gal) encased in concrete. No oil on the floor or in the drain. Took photos. Spill can be closed. (Sadique)

01/20/2006: Spill closed. (Sadique)

**Caller Remarks:**

Caller reports her driver delivered 13 gallons last night. He did not hear the vent alarm. Unknown to the driver the pipe to the tank was disconnected. Apt is switching over to gas. Spill was onto dirt floor in the basement. No company has been contacted for cleanup. Super to the building is Jose 917.642.6650.

**DEC Investigator Remarks:**

1/17/06–Vought–Off hours duty responder. Vought called Margaret Gentile and as per her super disconnected fill pipe and owner ordered delivery. Approximately 13 gallons of fuel was delivered and no whistle was heard by delivery man and he then stopped delivery. Serviceman from Stuyvesant Fuel found disconnected fill box. Vought called Zombeck and left message to return call to DEC. Vought received call from Zombeck and oil tanks were being removed as the building was switching to natural gas. Con Edison’s subcontractor covered fill line with steel plates and as they were removing the plates damaged the fill box. Cleanup of residence being performed by Con Edison. Soil being excavated in basement (7’x9’ excavation at time of call). AL Eastmond hired to clean up spill. Vought called Zombeck for update and left message to return call.

1/19/06–Hiralkumar Patel. Called Mr. Zombeck and he is going to call me back. I have sent out CSL to Mr. Zombeck

I received call from Mr. Zombeck. As per his information, the fill pipe was never disconnected from tank. this facility had two

tanks of capacity 275 gal. and as they are moving heating system from oil to gas system, one tank was already taken out last month by Al Eastmond. Bill Lightel (212-722-5506) at Calaray Gas Heat Corp. is the contractor who is handling this process of transferring from oil to gas. Bill has contacted Con Edison for gas system. and as per Mr. Zombek when crew from Con Edison was working on site, they had damaged the fill line at elbow. and it was cracked and broken and was leaking at elbow. as Con Edison was working on site, they had placed one plate over the fill port because they are digging nearby the fillport to get gas line in the house.

The oil company delivers oil every week and on the day of incident, they found that the fill port was covered and thought the fill line was disconnected and went back. Later on, the homeowner called the oil company for oil delivery. on 13th Jan., oil company had delivered 13 gal. of oil and the driver didn't check the gauge. As per the owner, when he went down in basement on incident day, he found elbow broken and there is 15 inch on gauge. He repaired it himself. there is no leak at present. and when he start removing absorbent and oil waste from basement floor, he found that the so called soil was dirt only. and the floor beneath that dirt was in good condition. there are no cracks or sewer port nearby. then he and his friend moved out all dirt from floor in two drums. and waiting for a guy from Empire Environmental to pick up for disposal. as per homeowner's knowledge, up until now no one is hired to cleanup the site or to pick up waste. he is waiting to hear from Calray Corp.

Calray Gas Heat Corp 211 East 117th Street Manhattan, NY 212-722-5506

Mr. Zombek is going to send me photographs of basement.

1/20/06-Hiralkumar Patel.

Left message for Margret at Stuyvesant Fuel. Spoke with Bill at Calray and he is going to call me back. Received call from Bill, and as per him, Con Edison had damaged fill line during work. but the spill was too little probably less than 3 gal. and its on concrete floor, and its all cleaned up and stored in barrel and waiting to get disposed.

Spoke with Ms. Margret Gentle at Stuyvesant fuel. the homeowner asked for delivery on 13th of Jan. and driver from fuel company went there at around 10 at night. Driver had started delivery oil, but he didn't hear vent alarm so he stop after delivering 13 gal of oil. on next day owner called fuel company to deliver oil. but before delivering oil, a man from fuel company names Robert Ditaco went out there to check vent alarm system and he found that the fill pipe was disconnected from tank. As per Margret, the super of the building was ready to do cleanup. the number for super on report is wrong and the person who was on the phone not ready to talk anything regarding case.

Talked with Mr. Zombek at 2:40PM. there are 10 tenants living in this building. he is taking pictures right now and going to send me within an hour. Make appointment for visit on monday after reviewing photographs and calling him on monday 23rd Jan.

1/23/06-Hiralkumar Patel. Received email from Mr. Zombek containing pictures of basement. C:Hiralkumar West End Ave

----- Sir the floor looks beige in that absorb all was sprinkled on it. Eastmond came to arrange removal of 13 bags. As I type, Con Edison is completing installation of gas line.

Lawrence Zombek President Orchard Management Inc. 249 West 76 St.#A New York, NY 10023 212-496-7387 phone 914-715-7485  
cell/txt larryz8@aol.com -----

Spoke with Mr. Zombek. there is no complaints from tenants about oil vapor. Con Edison has finished intallation of gas line and they probably start on gas from Wed. 25th Jan.,2006, once the oil tank will run out of oil. Mr. Zombek doesn't know the name of the person from Eastmond who picked up waste bags from site. He was hired by Calray. Probably Eastmond will remove this second tank from site once they start on gas. Left message for Mr. Bill Lightel at Calray.

Spoke with Mr. Izak at Eastmond. As he know, an associate named Mr. Rene Lewis (Cell: 917-299-7257) had went to Zombek's house to pick up contaminated waste. Left message for Mr. Lewis at 2:30PM.

1/24/06-Hiralkumar Patel. Spoke with Rene Lewis at Eastmond. as per him, its a solid concrete, having no cracks or sewer ports on floor. when he reached on site, there were 15 bags of debris ready to picked up. Little vapor smell in basement due to these bags. the fill line was cracked and less than 5 gal of oil on floor. floor looks good now and as per him, there is no subsurface contamination as the concrete floor was in good condition.

No further action required letter sent out to Mr. Zombek. Case Closed.

Caller Remarks:

LOOKS LIKE IT MAY BE COMING FROM AN LINE UNDER CEMENT; IT IS CONTAINED AND STILL INVESTIGATING;

DEC Investigator Remarks:

Sangesland spoke to Eddie Feliciano at Stuyvesant Fuel. He said there was a problem in the basement floor with a gate valve that seems to be leaking. This valve is between the tank and the burner. There appears to be some contamination in the soil around this valve. Unknown the extent of the problem.

Property manager Barry Zonan (212-675-0593) stated that Petroleum Tank Cleaners was on their way to the building right now to take care of any emergency work which may be needed (Isolate the tank?) They will return later this week to conduct whatever remediation work is needed.

10/7/2005 Sangesland spoke to Ray Lara at PTC. He replaced the valves and lines on two 275 gal aboveground tanks in the basement. Slight staining on the cement under the tanks. PTC told the property manager that the two tanks are old and should be replaced. Unknown if this work will be done.

Spill event closed.

Caller Remarks:

during digging in the street crew found contaminated soil

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL DEC Inspector notes:

2/24/99: Dave Perez ERT: Possible 3rd party spill, gas crew digging for gas main repair found contamination. Contaminated with oily substance. Requested Perez to contact Astoria lab, collect sample for oil. ID will pass along to primary for 2/23.

2/26/98: Bill Wallace e2mis has not been updated. Will check with chem lab for results of oil id and get back to me. He called back with PCB results: <1ppm

Excavation is still open. Samples for PCB, TCLP, Oil Id and tph are schedule for Monday. (Note: we did full sampling because we had to bring back some of the third party dirt back to our workout location pending analysis for disposal.)

Caller Remarks:

DISCREPANCY OF 350 GAL ON FEEDER M52 AT PUMP HOUSE #2 – CASE 120616 SPILL COULD ALSO AFFECT REGION 3 – REGION 2 REQUEST THEY BE ADVISED. FOUND DROPLETS OF OIL IN WATER IN A FILLER ON 80TH AND WEST END AVE. IN NY. UPDATE 10/19/98 AT 2037 – LOOKING FOR A LEAK ON M54 AND IT WAS FOUND 50 TO 60 GALLONS IN THE MANHOLE.

DEC Investigator Remarks:

05/03/07 – See e-docs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL

10/19/98, 2104 hrs: Mark Tibbe (off-hours responder) receives update from dispatcher that leak was found in manhole and contained 50 to 60 gallons. This turned out to be wrong. At 2237 hrs. finally got through to Cone Ed, and was given this update: there were 2 leaks:

- (1) major leak at 79th Street and West End Avenue which is being excavated
- (2) minor leak (<1 gph) at 155th St & St. Nicholas, which he had no further info on.

The feeder at that time was still active. (MCT)

10/19/98, 1459 hrs: Spoke with John Hegerty (Con Ed Transmission Ops). Feeder goes from W. 49th St to Sprain Brook substations. They are checking manholes now, and PFT van is out. Feeder run is 17 miles. Manhole survey (80 MHs) should be done on midnight shift. Line will not be depressurized. Leak rate right now is 15 gph (350 gallons since yesterday). They are evaluating the system to see if they can take it out of service and reduce pressure. (CAE)

10/19/98: at request of Randy Austin, I contacted Region 3 (Pete Doshna) and left him a message, since leak may be found in Reg. 3. (JHO)

10/20/98: Leak found at 79th St/West End Ave – clamp is on, permanent repairs will be done today. Met at site with Gerry Materazzo (TO) – leak is on southwest corner of 79th/WE Ave. Excavation is about 6' x 12' x 2.5' deep, and about 4' deep under leaking section. Soil at bottom of excavation under feeder smells of dielectric fluid. Told Gerry to guzzle as much as possible and sample and analyze for df. Sample to be taken from bottom of excavation. Gerry to guzzle tomorrow and page me to tell me when they will do sampling.

Clean Harbors is on scene with a 6000 gallon vac truck. Oil entering sewer at same corner. Have removed about 1000 gallons of oily water from sewer. Sorbent boom in sewer trying to plug oil so it can be vac'ed out. Called ERT Bill Wallace – he said DEP was notified of oil in sewer. (CAE)

APPENDIX B SITE NO. 28. TRANSFERRED FROM ENGELHARDT TO O'CONNELL.

~~~~~ e2mis no. 120-616:

19-OCT-1998 @ 13:00 STATION OPERATOR REPORTS DAILY PUMPHOUSE READINGS INDICATES A DISCREPANCY OF 350 GAL. FROM THE W.49TH STREET PUMPHOUSE #2 FEEDER M52.

At 12:30 conference call approx 15gph leak was declared on Fdr M52. To crews brought in from field. PFT van mobilized to 125th & B'Way to go South and TO crew will provide support. TO crews also checking Manhattan manholes. CGO crews to check Bronx and Westchester manholes. Fdr cannot be removed from service since Feeders C3403, A2253 and Y50 are OOS. Clean Harbors notified to respond with cleanup crew and standby at West End Ave and 7th St. VNR notified to standby with barhole and excavation crew at their yard at 124th St and 3rd Ave, Manhattan. 17:00 oil found in manhole 61738 on 155th St and St. Nicholas Ave. Samples taken to PFT van for analysis and to Chem lab for PCB and benzene. Clean Harbors 2nd tanker on location and sent up to MH61738 to pump and investigate manhole. 18:25 possible oil droplets found in sewer at West End Ave and 80th St. Sewer running north. Clean Harbors crew instructed to put oil pads/baloneyes in sewers. 18:50 Sewer checked at 79th and fluid found in sewer. Clean Harbors to install pads/baloneyes in this sewer also. Chem lab reports 98-11259 (mh61738) 3 ppm PCBs. Excavation to be dug at 79th St and West End Ave. Contractor excavated and found leak site at 22:30 10/19/98. At 23:30 temporary Plidco clamp was installed and holding on 5 line at leak location. Leak was on bottom of 5 .

Meeting with Chris Englehardt (DEC) and MEG geologist on location at 12 noon 10/20/98. Remove another 1 – 2 feet of soil after repair is done. MEG to take samples for dielectric fluid in bottom of trench and write report. Trench can be backfilled at that point. on 10/22/98 additional excavation was completed and a recovery well was installed by MEG at the leak location. Samples could not be taken from soil at bottom of trench since the bottom of the trench was rock. Clean Harbors removed 750 gallons of oil/water from sewers and leak location and 7 cubic yards of material from excavation. Site was backfilled and restored. CSD reports that 300 gallons was lost from leak site.

On 12/3/98, 12/8/98, 12/16/98, 12/31/98, 4/1/99, 8/3/99, 8/12/99, 8/20/99, 8/27/99, 9/1/99, 9/10/99, 9/16/99, 9/24/99, 9/30/99 and 10/20/99 MEG removed 1 cubic yard of absorbents and boom from adjacent sewes. On 3/24/99 MEG submitted report to Con Ed for cleanup and well activities.

On November 11, 1998 Miller Environmental Group pumped out 4 gallons of oil/wate out of recovery well.

Caller Remarks:

caller see's oil on ground ifo house. poss from delivery to school next door.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND CALLED MARIA PASCAL (10.17 AM), WHO CONFIRMED THAT SPILL WAS DUE TO AN OVER-FILL TO HER NEIGHBOR'S OIL TANK. NEIGHBOR'S ADDRESS IS 433 WEST END AVENUE, VIZ A SCHOOL OUT OF SESSION UNTIL 1/6/03. CALLED SUPER FOR SCHOOL(917 939-7207), WHO CONFIRMED THAT SPILL IS ABOUT 10 GALLONS OF HEATING OIL. NO SOIL OR WATER WAS IMPACTED. FERRANTINO FUEL CAUSED THE SPILL AND THEY ARE DOING THE CLEAN-UP.

E.R.

CALLED SUPER (EDDIE AYALA) AT 2.02 PM, WHO CONFIRMED THAT CLEAN-UP IS COMPLETED SATISFACTORLY. THE CLEAN-UP WAS WITNESSED BY THE NYC-DEP.

CALLED MARIA PASCAL (2.14 PM) WHO CONFIRMED THAT CLEAN-UP IS COMPLETED TO HER SATISFACTION.

E.R. DISCUSSED WITH STEVE, WHO RECOMMENDS CLOSURE.

1/02/2003-Vought-See spill #209976 at same location. Spill #0209976 closed and referred to this spill. Vought spoke with Benny Rosin who explained above situation regarding overflow by Farrantino Oil. Spill came out of vent due to broken petrometer.

Oil came out of vent and splashed on sides of both 425 and 433 West End Avenue. Spill entered window box of basement apartment of 425 West End Ave (occupied by Maria Pascal). Window box was initially cleaned using speedy dry. Vought called Farrantino Oil (718-832-6700) and spoke with Dennis Goldstein who is immediately sending out crew. Window box and walls will need to be powerwashed. Goldstein told by Vought that a work invoice will needed to be faxed to NYSDEC for spill closure. Goldstein and Rosen stated that basements of both residences were inspected and no oil was found. According to Rosin the window box has no cracks in the concrete and also contains a drain at the bottom. Duty Desk also received message from Maria Pascal. Vought called Maria Pascal and left message that cleanup crew was on way.

7 GAL OF OIL ON 4500 GAL OF WATER. CLEAN UP WILL BE DONE WHEN CREWS ARRIVE CON ED 125-095

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL CON ED E2MIS NOTES 6-09-99

7 gals. of unknown oil on top of 4500 water inside MH62564,oil is contained, no sample taken.

TO supervisor B. Byrne responded to location and found only a sheen in the manhole.

Cleanup completed on 5-27-99 X Removed/recovered liquid/solids. X Used absorbents to remove residual fluids. X Removed visible traces of oil.

spill to inside basement floor of apartment building/clean up crew en route

DEC Investigator Remarks:

5k tank. 3k dleivery. Driver noticed approx 50 gal weeping through concrete wall. tank is inaccessible. PTC responding with vac truck and crew. DEC Patel to respond as he is near location.

10/10/13–Hiralkumar Patel. alternate address: 301–311 West 77th Street, 365–369 West End Ave

no other spill found.

PBS #: 2–266736. as per PBS record, the site has following two tanks, in–service: – one (1) 5,000 gal #6 oil AST in contact with soil, installed in Dec. 1990 – one (1) 5,000 gal #2 oil AST on saddles, installed in Dec. 1997

2:25 PM:– visited site. met Noe Osorio (building super) and Eric Sutphen (Hess).

site has two 5,000 gal tanks, inside vault with access, in basement. one tank is used for #6 oil and the other tank is used for #4 oil. fill port for #6 oil tank is located at the curb, along W 77th Street. Noe mentioned that #6 oil fill line was replaced in 2008, due to issues with fill box. fill port for the #4 oil tank is along the building's southern wall (close to #6 oil remote fill line) and about 2.5 ft above ground. vent pipes for both tanks are located near the fill port for #4 oil tank.

Noe is working at the site for past six (6) years and the #4 oil tank was not filled up in last six years as they use #6 oil. Noe mentioned that building is converting from #6 to #4 oil.

as part of conversion process, Riteway Tank cleaned the #4 oil tank on 10/03/13. during cleaning, Riteway removed about 2,000 gal oil. after cleaning, today Hess hired sub–contractor to deliver 3,000 gal #4 oil. Eric stated that driver heard whistle during the entire delivery. there was no sign of overfill at the vent pipe.

after making the delivery, driver noted oil coming up from sidewalk, near the fill line. driver and building super checked in basement and found oil on boiler room floor. tank vault is along building's southern foundation wall. elevation of tank vault floor is about 2 ft higher than elevation of boiler room.

oil seepage noted from western wall (into boiler room) and northern wall (into water tank room) of the tank vault. oil got into drain inside the water tank room, which ends into boiler room sump. spilled oil in boiler room got into sump. Noe immediately disconnected the sump.

Hess hired PTC who will pump out product from impacted drain in water tank room, boiler room floor, tank room and boiler room sump.

no petroleum odors noted outside the boiler room. could not inspect the tank room as boiler room floor, in front of tank vault access, was covered with oil.

365 West End LLC.

****property owner**** c/o Melohn Properties Management

****management office**** 1995 Broadway, 14th Floor New York, NY 10023 Attn.: Andrew Melohn

****property manager****

Ph. (212) 787-2500 Ext. 13 email: andrew@melohnprop.com

Noe Osorio

****building super**** Ph. (212) 595-1920

10/11/13-Hiralkumar Patel. 8:45 AM:- visited site. met Noe. PTC removed oil from impacted areas.

inspected tank vault, through vault access door. found minor oil on tank vault floor. PTC will continue cleanup. the #6 oil tank is located on south (along foundation wall) side of the vault and the #4 oil tank is located on north side. #6 oil tank is on brick saddles, while #4 oil tank is on metal legs.

Noe mentioned that the #4 oil fill line goes vertically down for about 1 ft under the sidewalk before it enters into the tank vault.

no petroleum odors noted. Noe mentioned that plumber will replace leaking #4 oil fill line next week. informed Noe that contaminated soil must be removed from under the sidewalk.

10/21/13-Hiralkumar Patel. 9:00 AM:- visited site. met Noe. no further work done at the site. asked Noe to seal fill port for #4 oil tank, immediately. also asked him to clean impacted areas in tank/boiler/water tank rooms for better monitoring.

12/06/13-Hiralkumar Patel. 3:30 PM:- spoke with Noe. he mentioned that PTC started excavating contaminated soil from sidewalk area, on 12/03/13.

12/09/13-Hiralkumar Patel. 12:53 PM:- spoke with Ray at PTC. they started removing contaminated soil from under the sidewalk. work will resume on 12/11/13.

12/18/13–Hiralkumar Patel. 9:40 AM:– visited site. met Noe. inspected tank/boiler rooms. found oil in boiler room sump. asked Noe not to pump oily water into sewer system. Noe mentioned that PTC has cleaned sump at least four times, but oil keeps coming in. found oil seepage from tank room wall, from area underneath the tank room floor (which is at higher elevation than boiler room). Noe mentioned that PTC has started remediating contaminated soil under the sidewalk.

based on observations during the site visit, investigation needed under the tank room floor as well as area around the boiler room sump.

12/19/13–Hiralkumar Patel. 1:55 PM:– spoke with Joseph Helmreich, at building management, as Mr. Melohn was out of office. informed him that the department requires removal of oily water from sump, stop any discharge of oily water into sewer system and delineation/remediation of contamination. 3:15 PM:– sent letter to Mr. Melohn requiring removal of product from boiler sump; delineation of contamination along fill line, inside tank room and around sump; and endpoint samples. asked him to submit report by the end of 03/14/14. letter emailed to Mr. Melohn.

01/13/14–Hiralkumar Patel. 10:17 AM:– spoke with Mark at PTC. they are still removing contaminated soil.

01/16/14–Hiralkumar Patel. 3:11 PM:– spoke with Ray. they finished and backfilled sidewalk excavation after collecting endpoint samples. Ray mentioned that they pumped out oil/water on following dates:

– 10/10/13 – when spill occurred – 12/10/13 – 500 gal – 12/11/13 – 500 gal – 12/31/13 – 200 gal – 01/13/14 – 100 gal

3:25 PM:– visited site. met Noe. he mentioned that PTC finished soil excavation and backfilled sidewalk excavation today. inspected boiler room. found mostly water with some oil in boiler room sump. super is using absorbent pads to collect oil in sump. sump pump was disconnected.

during inspection, noted concrete patch on boiler room floor in southwestern end. Noe mentioned that couple of years ago, they dug boiler room floor in that area near existing sewer trap, to connect another line to existing sewer system. during sewer line work, they dug to groundwater. there was no oil observed on groundwater during sewer line work.

Noe mentioned that PTC is planning to dug test pits in between tank room and boiler room sump.

01/17/14–Hiralkumar Patel. 3:30 PM:– left message for Mr. Melohn. asked him to provide work history regarding sewer line repair.

03/17/14–Hiralkumar Patel. 12:38 PM:– received call from Bob from PTC. they will install a skimmer in boiler room sump. borings will be installed in boiler room, this week.

04/30/14–Hiralkumar Patel. received message from Al Tonn (at 11:25 AM on 04/29/14) from Sovereign Consulting. he mentioned that they will do subsurface investigation, including installation of eight borings, today (04/30/14) and tomorrow.

Albert Tonn Sovereign Consulting, Inc. Ph. (631) 753–8380 email: atonn@sovcon.com

05/13/14–Hiralkumar Patel. 10:56 AM:– spoke with Al. they installed nine borings. bedrock was found couple of feet below grade. he is waiting for sample results from lab.

06/23/14–Hiralkumar Patel. 3:26 PM:– received message from AI.

06/26/14–Hiralkumar Patel. 10:16 AM:– spoke with AI. he mentioned that investigation has been completed and he is planning to submit report, including recommendations for remediation, by the end of July 2014, after he discuss with few contractors. asked AI to submit investigation report now. informed him that a remedial action work plan can be submitted by the end of July 2014. AI will submit investigation report by next week.

07/01/14–Hiralkumar Patel. received email from AI (at 3:59 PM on 06/30/14) including investigation report. abstract:

– on 10/10/13: PTC pumped out approx. 400 gal of fuel oil off the floor of the tank room and basement, and approx. 350 gal of oil–impacted water from basement sump – PTC removed impacted soil from around the former remote fill lines – total of 42 drums of impacted soil, 4 drums of absorbents and 1,950 gal of oil/water were transported off–site – PTC collected three endpoint samples from fill line excavation area – no contamination found in endpoint samples from fill line excavation – installed nine (9) soil borings/temporary wells point (SB–1 through SB–9) – two borings (SB–1 and SB–2) were installed within tank room and others (SB–3 through SB–9) were installed in boiler room – bedrock was found at 3 ft below tank room floor and at 4 ft below boiler room floor – soil observed during this investigation consisted of dark brown to red–brown or gray sandy gravel and silty sand – depth to groundwater at the property ranged from less than 1 ft to 2 ft bg – no groundwater encountered in SB–1 and SB–2 – fuel oil was observed in soil borings SB–5A, SB–7 and SB–8

----- – due to very limited soil encountered in SB–4 and SB–5, these boreholes were relocated and identified as SB–4A and SB–5A – due to the limited soil profile and shallow water table, inly the soil sample with the highest PID reading, above or below the water table, was obtained from each borehole – temporary well screen was installed within boreholes – total of nine (9) soil and seven (7) groundwater samples were submitted for analysis

soil analyticals:

08/20/14–Hiralkumar Patel. received email from AI (at 2:05 PM on 07/31/14) including remedial recommendation report. abstract: – proposed to excavate grossly impacted soil to bedrock in an area of approx. 15 ft by 25 ft and ranging in depth from approx. 2 to 4 ft – proposed to collect endpoint sidewall samples – as excavation will be extended to bedrock, endpoint bottom samples will not be collected – after the excavation is complete, the area is to be backfilled with 3/4 inch gravel – a 25 ft long recovery trench drain will be installed – two 4–inch dia. perforated PVC drain pipes will be installed within the trench, and connected to a collection sump – sump will be used to monitor for the presence of oil montly for three months – if oil is discovered, then absorbents will be used to remove the oil

the proposed remedial recommendations does not include contaminated area at former boring locations SB–1 and SB–3.

4:25 PM:– sent email to AI and asked to provide plan to remediate contaminated areas at former boring locations SB–1 and SB–3.

08/27/14–Hiralkumar Patel. 8:16 AM:– received email from AI. he mentioned that as analytical results, of SB–1 and SB–3, for VOCs were below residential use SCOs and due to possibility of structural damage to the buildng in area of SB–1, no remediation was proposed in these areas.

AI compared sample results of SB–1 and SB–3 with restricted residential use SCOs, which shows no VOCs above limit in SB–1 and SB–3.

10:11 AM:– sent email to AI including copy of soil/gw sample result tables from report dated 06/30/14. informed him that sample results are compared with unrestricted use SCOs and it confirms contamination in SB–1 and SB–3. asked him to call back to discuss further.

08/28/14–Hiralkumar Patel. 3:12 PM:– received call from AI. informed him that sample results are compared with unrestricted residential SOCs which shows VOCs above limit and samples from SB–1 and SB–3. AI mentioned that due to short distance between tank and tank room wall and also tank saddle in area, excavation in tank room is not possible. based on this, asked AI to excavate test pit in boiler room, close to SB–1 area. also asked him to include SB–3 area in proposed excavation. AI will discuss with his client and will call back.

09/02/14–Hiralkumar Patel. 3:28 PM:– received email from Al. he mentioned that the remedial excavation will be extended from the main excavation area up to area around boring SB–3 and then immediately in front of the tank room wall. due to the limited access and concerns for undermining the tank supports, no excavation work will take place within the tank room.

09/08/14–Hiralkumar Patel. 3:52 PM:– sent email to Al. informed him that the work plan looks ok and asked to submit work schedule.

11/13/14–Hiralkumar Patel. 1:49 PM:– spoke with Al. he mentioned that remedial work has not been conducted yet. 1:51 PM:– left message for Mr. Melohn. 1:56 PM:– left message for Mr. Osorio.

11/17/14–Hiralkumar Patel. 9:27 AM:– left message for Mr. Melohn. 9:28 AM:– left message for Mr. Osorio. 10:46 AM:– received call from Mr. Osorio. he is monitoring the boiler room sump and has not seen anymore product. he will asked Mr. Melohn to call back regarding soil excavation in boiler room.

01/06/15–Hiralkumar Patel. 1:03 PM:– received email from Al. he mentioned that contractor (American Environmental Assessment Corp) has scheduled to begin remedial excavation on 02/02/15, after getting necessary permits.

01/30/15–Hiralkumar Patel. 12:20 PM:– received email from Al. due to projected snow storm, remedial work has been postponed.

02/03/15–Hiralkumar Patel. 4:00 PM:– received email from Al. contractor will start field work tomorrow.

02/05/15–Hiralkumar Patel. 2:34 PM:– received email from Al. due to suspended alternate side parking (due to snow piles on street), crew can not find space to park their equipment. they will try to start project next week, if parking available.

03/19/15–Hiralkumar Patel. 2:56 PM:– received email from Al. he mentioned that excavation was completed on 02/13/15 and endpoint samples were collected. they have started backfilling using some of the boulders from the excavation. two separate recovery trenches will be installed in excavation.

07/14/15–Hiralkumar Patel. 2:57 PM:– received email from Al including remediation report. abstract: – total of 35.52 tons of impacted soil was excavated from boiler room – found shallow water table (1–2 ft below floor) – total of 12,717 gal of water/oil mixture pumped out of the excavation – impacted soil was excavated down to bedrock in an area of approx. 27 ft in length by 15 to 22 ft in width and ranging in depths from approx. 1 to 3 ft – during excavation, numerous large boulders were encountered that were removed from the excavation and used for backfilling – due to the presence of bedrock, no bottom samples could be collected – total of six endpoint sidewall samples were collected, from just above the bedrock ranging in depths from 20 to 32 inches – due to site constraints, the excavation was limited to the west due to the boiler, to the east to allow access to the stairs and the mechanical room, and to the south due to underground utilities – areas immediately surrounding building footers could not be excavated – a recovery trench was installed in two section due to the presence of a subsurface wall/structure (possible remnants of old coal storage bin) – one section of the recovery trench included one 24 inch diameter sump set at a depth of 33 inches and connected to two 4 inch diameter horizontal drainage pipes measuring approx. 7 ft and 10 ft in length – second section of the recovery trench included one 24 inch diameter sump connected to one 4 inch diameter horizontal drainage pipe, approx. 7 ft in length – due to very shallow bedrock on the northwest corner of the excavation, the horizontal drainage pipe in second section of the trench system was angled further to the east – each horizontal drainage pipe included a cleanout port – recovery sumps and cleanout ports were monitored on Apr. 30, May 30 and Jun 22, 2015 – neither floating product

nor an oil sheen were detected during the three monitoring events – found some contamination in endpoint sidewall samples

07/23/15–Hiralkumar Patel. 1:53 PM:– sent letter to Mr. Melohn requiring monthly monitoring and quarterly sampling of recovery trench sumps, for a minimum of one year. asked him to submit quarterly reports, with first report due on 11/20/15. letter emailed to Mr. Melohn, AI, Thomas Lobasso (tlobasso@sovcon.com), Barry Goldberg (bgoldberg@melohnprop.com), Amir Kornblum (ak@themelohngroup.com), Jean McCreary (JMcCreary@nixonpeabody.com) and Jesse Hiney (jhiney@nixonpeabody.com).

11/30/15–Hiralkumar Patel. 3:38 PM:– received email from AI including first quarterly report. two trench sumps were gauged monthly. no LNAPL was detected during the three gauging events. groundwater samples were collected from two sumps on 10/09/15. no contamination noted in groundwater samples. next sampling will occur in Jan. 2016.

02/03/16–Hiralkumar Patel. received email from AI (at 1:03 PM on 02/02/16) including quarterly report and closure request. two remedial trench sumps were gauged on 11/06/15, 12/04/15 and 01/08/16. no LNAPL was detected in the sumps. groundwater samples from two sumps were collected on 01/08/16. no contamination noted in groundwater samples.

reviewed remediation report again and noted below: – six endpoint samples were collected individually on separate dates between 02/24/15 and 03/12/15 – neither floating product nor an oil sheen were detected in the sumps and cleanout ports during three monthly site visits in Apr., May and Jun. 2015

after receiving remediation report, the department sent letter in Jul. 2015 requiring monthly monitoring and quarterly sampling of recovery trench sumps. the sumps were monitored monthly between Aug. 2015 and Jan. 2016.

after reviewing available information, case closed based on following: – remediation conducted at the site (soil excavation in Feb./Mar. 2015) – results of monthly monitoring of the recovery trench sumps for almost a year (Apr. 2015 to Jan. 2016) – two quarterly groundwater sampling results (Oct. 2015 and Jan. 2016)

9:58 AM:-- sent spill closure letter to Mr. Melohn. letter emailed to Mr. Melohn and Al.

DEC Investigator Remarks:

157036. On 1/31/05 at 20:21 K. Ferraro # 06749 #9 Supervisor called to report that at 20:15 he discovered 1 pt. of an unknown oil mixed with 25 gallons of water in manhole-49901. this structure is located at SEC W. 84 St & west End Ave. He was there because there was an emergency in the next structure & was going to run cable from this structure to that one. He was working on acct # f3445. There was no sewers or waterways affected. No fire or smoke was involved in this structure. no private property was affected. The cause & source of the oil is unknown. A spill tag # 38849 was hung & 2 samples were taken 1 for pcb & 1 for ID with a chain of custody # DD-07868. This will not be a 24 hr spill due to storm emergencies tying up crews & equipment. 1/31/05 20:48 CIG C. Shikarides # 84546 was notified. R. Bruns # 21106

1/31/05 23:47 Received lab results, Lab Sequence Number: 05-00833-001 Oil Identification

----- Analysis indicates the presence of a cable oil.

3/1 @ 20:38 Cleanup completed on 3/30 @ 12:30 Two bags of Solid waste consisting of PPE & rags and matting, arms and PC joints
 Liquid waste removed – three gallons of oil 40 gallons of water and 50 gallons of mixed with rinse water by the Vactor Truck. The structure was double-washed with SLIX , washed floor, walls and crabs. Environmental tag # 38849 was removed

4/1 @ 20:50 There was no visible sign of the source – possibly thru ducts or third party spill into manhole

Update: 4/20/05 @ 08:26 Correction to update 3/1 @ 20:38 should read 4/1 @ 20:38 and cleanup completed on 3/30/05.

Caller Remarks:

CALLER STATES THAT DUE A FAILED UNREGISTERED TANK AN UNK AMOUNT OF PRODUCT SPILLED TO THE BASEMENT CLEAN UP WAS NOT DONE.

DEC Investigator Remarks:

Sangesland spoke to an attorney for a potential purchaser of this apartment building. There is a 5,000 gal tank (size?) that is NOT PBS registered. There is also signs of leaking in the basement. The building is being sold and the purchaser would like to have all of the legal/environmental issues cleared up before the sale goes through. Sangesland left a voice message with Mr. Scott Folgelberg asking for more information about the spill (unknown if he is an owner or manager of the building). Find and owner/manager and send a TTF/CSL letter to them.

According to the building superintendent, a spill of No. 4 fuel oil occurred on the subject property approximately 10 years ago as a result of an overflow and possible rupture of aboveground piping within the aboveground storage tank (AST) vault located within the basement / sub-basement area of the building. The fill pipe had been repaired subsequent to that release and there were no indications of a more recent/current release. The oil was recovered from the basement boiler room area as well as the AST vault immediately following the release. Initially, a spill was not reported to the New York State Department of Environmental Conservation (NYSDEC).

The cause of the historical release is believed to be the reported failure of the remote fill pipe during a delivery of oil a number of years ago. The fill pipe had been repaired subsequent to that release and there were no indications

On August 19, 2009, Commercial Assessments performed a Phase I Environmental Assessment at the subject property. During the performance of the Phase I free product oil was observed on the floor of the boiler room, within the sump pit and emanating from the lower portion of the basement wall immediately beneath the AST vault. The sump pit reportedly discharges to the New York City sanitary sewer system.

On Thursday September 3, 2009, Partner conducted a Phase II Subsurface Investigation. The investigation scope included six soil borings (B1 through B6). Borings B1 through B4 were advanced in the boiler room area and borings B5 and B6 were advanced in the AST vault area. Borings B1 through B4 and boring B6 were advanced approximately 6-inches below the base of the concrete floor, at which point refusal was encountered. Boring B5 was advanced to a depth of approximately 5 feet below the surface at which bedrock was encountered.

Groundwater and free product was identified a top the bedrock in borings B1 through B4. No groundwater or free product was identified in either boring B5 or B6 with the thickest accumulations identified in boring B4.

Partner collected 6 soil samples on September 3, 2009; however, based on visual observations and the presence of free product only two samples B1 and B6 were analyzed for VOC's and SVOC's. The analytical results indicate that none of the analyzed soil samples had detectable concentrations of VOC's and SVOC's. All detected concentrations were below the regulatory guidelines.

A letter was sent to Scott Fogelberg from Commmerical Assessment on September 21,2009 requesting the following: 1.- Delineation of soil and groundwater contamination via determination of groundwater flow direction. 2.- Implementation of interim remedial measures if free product is present in the sump. 3.- submission of a surrounding area site map and former/current locations of

all ASTs.

Partner Engineering and Science sent the proposal for remedial action dated 10/02/2009. The scope of work include the installation of several piezometers at the boring locations.

Partner Engineering and Science sent the Supplemental Investigation Report and Proposal Remedial Action Work Plan dated July 30,2010. Partner conducted a Supplemental Investigation to determine the status of the residual oil observed in the AST vault and boiler room locations.

Six (6) additional shallow borings V1 through V6 were advanced through the concrete floor on May 25, 2010 to evaluate the extent of the release. The original scope of work was to include the installation of several piezometers at the boring locations; however, no piezometers were installed during the investigation as drilling refusal (bedrock) was encountered at depths of eight inches or less, making piezometer installation impractical.

In addition, three horizontal borings H1,H2,H3 were advanced through the wall separating the boiler room from the AST vault to a maximum depth of penetration of approximately 18 inches. The locations were selected to correspond to previously observed locations of oil staining / oil permeation of the masonry materials .

Oil was observed in four of the six shallow borings which coincided with elevated PID readings. At the time of the investigation, oil was again observed to be seeping from the base of the AST vault wall and through the brick at one location along the wall.

3-3-2011 The spill was reassigned to AZ as per V. Brevdo. AZ

3-3-2011 Contacted David Umbach ph. 201-335-0149. They installed a sump pump, around 20 weep holes, and one trench to collect the free phase product. They are using recirculation pump to pump from the lower level of the boiler up into a tank vault and then the water comes down the wall behind the tank and into the weep holes. They collecting water and oil. They recovered about 110-120 gal of free product by now. I requested submittal of quarterly progress reports. I requested separate measurements of water and product. AZ

10-12-2011 David Umbach contacted me and asked for an approval of a WP submitted in 2010 to S. Sangesland. I asked him to send me an installation report and a status report. The system is offline since March 2011 due to contract negotiations. AZ

11-10-2011 Remedial Action update was received by DEC. Oil was observed to be leaching through the tank vault wall and onto the boiler room floor at 30 W 70th Street. In 2009 borings were advanced within the vault and through the boiler room floor. Oil was present in soil samples from borings advanced through the boiler room floor and visual observations of oil seeps through the wall separating the AST vault and boiler room and oil permeation of the masonry materials along the wall. The cause of the release is believed to be the reported historical failure of the remote fill pipe during a delivery of oil. The fill pipe had been repaired subsequent to that release.

Partner retained a contractor on behalf of Fine Times Inc. to cut and excavate a narrow trench along the base of the wall separating the AST vault and boiler room. The trench was installed on either side of a concrete block pier located beneath the door to the AST vault along a path that will intercept the current oil seep and other areas where site observations (e.g., oil staining of the wall) indicate oil is trapped. A shallow sump / pit was installed so as to enable the trenches to drain to the sump under the influence of a low-flow pump. The pump is used to remove perched water and recirculate it above and behind the

wall of the AST vault to help induce the flow and capture of oil by the underlying trench. A second automated free product recovery pump system which tracks and follows water level elevation changes within the sump removes accumulating oil directly to a holding tank for future disposal. The system was completed and readied for operation in January of 2011.

To date, a total of three 55 gallon drums of oil contaminated soil and concrete have been collected and disposed of which were generated during the system installation process. Additionally, a total of five 55 gallon drums of mixed oil and water have been collected and disposed of to date which were also accumulated during the system installation and start up operations.

After the system is up and running, a surfactant solution can be used to amend the re-circulated water stream to help flush out additional oil trapped beneath the AST vault and behind the wall. As remediation progresses, a bioremediation amendment solution will be used to help enhance the biodegradation of residual oil that remains trapped behind the wall but which continues to resist removal by flushing. System operation parameters will be determined by trial and observation over the first 1–2 months of operation and will be adjusted to optimize removal by Partner personnel on site as conditions warrant. Quarterly reports will be provided to document the volume of water treated and volume of oil collected as the system is in operation. AZ

8–20–2012 A status report for the 2nd quarter of 2012 was received and e-doc'ed. Currently, the system is processing approximately 1,200 gallons of water per day, at an average of 0.83 gallons per minute, (gpm) or approximately 50 gallons per hour (gph). This calculation estimates the volume of water treated during the second quarter at 109,200 gallons. No measurable quantity of free product has been recovered during the second quarter of 2012.

During August 2012, a bioremediation amendment solution will be used to help enhance the biodegradation of residual oil that remains trapped behind the wall but which continues to resist removal by flushing. System influent water samples will be collected for volatile organic compounds (VOCs) analysis by NYS Stars List (SW846/8260) and semi-volatile organic compounds (SVOCs) analysis by NYS Stars List (SW846/8270C) at the end of the second quarter to determine the effectiveness of the treatment. AZ

1–11–2013 Received a quarterly report dated October 20, 2012. No e-copy was attached. Left a message asking for the electronic copy. During August 2012, a bioremediation amendment solution was added to help remediation of residual oil that remains trapped behind the wall. The system is processing approximately 1,100 gallons of water per day. AZ

9–20–2013 Received a quarterly report dated June 14, 2013. No e-copy was attached. Left a message for David Umbach at 732–380–1700 #1255. The report stated that a spill of undetermined volume of fuel oil occurred on the property in approximately 1999. The spill was a result of overfill and possible failure of aboveground piping within AST vault room located within the basement of the building. Partner cut and excavated a narrow interceptor trench through the concrete floor. The trench was intended to intercept the oil seeping from behind the AST tank vault and facilitate flow and capture of perched water and oil. A shallow pump was constructed to facilitate drainage. The system was completed in 2011. A total of three 55 gallon drums of oil contaminated soil and concrete and five 55 gallon drums of mixed oil and water were generated and disposed off-site. The calculated total volume of water treated in four quarters of system operation is estimated at 436,800 gallons. During August 2012, a bioremediation solution was added to help enhance the biodegradation of residual oil. Influent water sample was collected in November 2012. NO VOCs or SVOCs were detected. Additional sheen and/or oil globules are not present.

DEC comments: no historical free phase table was submitted, when free phase was present last time in the sump pump? No e-copy was submitted to DEC. AZ

9-23-2013 Spoke with David Umbach. Conveyed DEC's concerns. He will submit requested info. AZ

10-22-2013 Left a message for David Umbach 732-380-1700 ext.1255. No e-copy was submitted to DEC. AZ

10-25-2013 Discussed the site with David Umbach. Partner submitted 4 reports for the site and a separate table with the historical product thickness data. They will combine all reports in one and include the historical product thickness table. The report will be re-submitted. AZ

10-30-2013 A spill of undetermined volume of fuel oil occurred on the property in approximately 1999. The spill was a result of overfill and possible failure of aboveground piping within AST vault room located within the basement of the building. Partner cut and excavated a narrow interceptor trench through the concrete floor. The trench was intended to intercept the oil seeping from behind the AST tank vault and facilitate flow and capture of perched water and oil. A shallow pump was constructed to facilitate drainage. The system was completed in 2011. A total of three 55 gallon drums of oil contaminated soil and concrete and five 55 gallon drums of mixed oil and water were generated and disposed off-site. The calculated total volume of water treated in four quarters of system operation is estimated at 436,800 gallons. During August 2012, a bioremediation solution was added to help enhance the biodegradation of residual oil. Last two sampling events in July and November of 2012 of the influent water samples detected no Volatile or Semi-Volatile compounds above MDL. Oil sheen and/or oil globules were absent within the sump pump since April 2012. No oil was leaching through the boiler room wall. Based on this information this spill is closed. AZ

11-4-2013 The following e-mail was sent to David Umbach (Partner Engineering and Science, Inc):

Dear David,

I have reviewed a Remedial Action Summary Report dated October 28, 2013. The report states that a spill of undetermined volume of fuel oil occurred on the property in approximately 1999. The spill was a result of overfill and possible failure of aboveground piping within the aboveground storage tank (AST) vault room, located within the basement area of the building.

A narrow interceptor trench was cut and excavated through the concrete floor. along the base of the wall separating the AST vault and boiler room. The trench was intended to intercept the oil seeping from behind the AST tank vault. Also, the trench facilitated flow and capture of perched water and oil. A shallow pump was constructed to improve drainage. The system was completed in 2011.

A total of three 55 gallon drums of oil contaminated soil and concrete, and five 55 gallon drums of mixed oil and water were generated and disposed off-site.

The calculated total volume of water treated in four quarters of system operation is estimated at 436,800 gallons. During August 2012, a bioremediation amendment solution was added to help enhance the biodegradation of residual oil.

Confirmatory system water samples were collected for Volatile Organic Compounds (VOCs) and semi-volatile organic compounds (SVOCs) analysis. No VOCs or SVOCs were detected above MDL. Oil sheen and/or oil globules were absent within the sump pump since April 2012. No oil was leaching through the boiler room wall.

Based on this information this spill is closed.

The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:

- I. The off-site migration of petroleum contaminants that was unknown at the time of this closure.
- II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure.
- III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment.
- IV. Fraud in obtaining this spill case closure determination.

As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely.

Sincerely,

Alex Zhitomirsky

Caller Remarks:

ON 1000GAL OF WATER – SAMPLE TO BE TAKEN – CASE #129704

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL

1/21/00, 3:10 PM – spoke with ERT Stan Piczsatowski – asked him to have Joe Arcoleo (on-scene ERT) call me.

3:45 PM – Over 50 tanker on-site. Estimate of oil amount made visually – approximatley 1 of oil on 1 foot of water at bottom of manhole. (JHO)

~~~~~ e2mis no. 129704:

On 1/21/00 Senior Elec. Tech. F. Henry(21147) and R. Coletti (49504) of Corrosion Survey

Central Gas Operations were on a Periodic inspection for cathodic protection for FDR M51/M52 and discovered 60 gallons of unknown old oil on top of 1000 gallons of water inside mh 61729. This is an underground structure and containment is not known at the present time. No samples were taken at the present time. Corrosion Techs are on stand by to be relieved by UT crew.

DEC 99-12170. Con Ed transportation called for over 50 ppm PCB tanker to pump out manhole. Chem lab notified to take samples. Temp EPA ID # NYP004049011 received from ERT for pumpout of manhole by Con Ed tanker assuming 50-499 ppm PCBs. At 14:10 Vac Trucks dispatched from Corp Trans to pump out manhole. Clean Harbors notified to respond and clean out manhole and treat as 50-499 since PCB results are unknown at this time. Con Ed tanker sent back empty. At approx 15:00 Stan Baldwin (NYCDEP) was on job site and he left at 16:00. Clean Harbors on site and Manhole pumped and double washed. Joe Arcoleo on site. Chem lab reports 00-00669 <1.00 ppm PCB. Clean Harbors given lab result and released from job site. They removed 1200 gallons of liquid from manhole. At 10:00 1/22/00 manhole was checked by TO crew – no sign of leak was found.

CON ED #121680 DEBRIS AND OIL ON TOP OF 750 GALLONS OF WATER. SAMPLE HAS NOT BEEN TAKEN. WAITING FOR A CREW TO TAKE SAMPLES. CLEAN UP PENDING RESULTS.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ENGELHARDT E2MIS 121680

Logger : Louis Cook (15851) Date: 12/3/98 Description: On 12/3/98 Senior Elec. Tech. R. Dayton (05458) and B. Ciruzzi (02192) of Corrosion Survey Central Gas Operations were on a visual inspection of manholes for potential leaks on FDR M51/M52 an discovered 6 gallons of unknown oil and solid debris on top of 750 water inside mh 61729. The Techs are standing by the mh until a crew U.T. relieves them They noted that the oil is contained and did not enter any sewers or waterways. No sample was taken.

REFERRED TO S&TO THROUGH EMAIL NOTIFICATION.

DEC #98-11082. Samples taken by chem lab. Waiman Wong (DEP) on location at approx 17:00. He demanded a sample to be taken from the manhole . Sample given to him. CGO crew on location to standby until relieved by TO crew. Chem lab results 98-13414 <1.0 ppm

PCBs Clean Harbors reported to location and cleaned manhole by solidifying liquids (estimated at less than 100 gallons total), and vacuuming up all solids in manhole. Clean up completed at 01:00 12/4/98. Clean Harbors removed estimated 10,000 pounds of debris from manhole. ERT notified. VS 78367

UPDATE: Entered by Alice F. Williams – Employee # 75829 on December 4, 1998 at 07:48:00 LARGE OIL SPILL Con Edison Incident No. 121680 CLEANUP CHECKLIST NYSDEC Spill No. 98–11082 Hard Copy File Location \_\_\_\_\_ Name of person completing checklist: VERNON SCHAEFER Con Edison Operating Department responsible for spill cleanup: T/O (1) A large oil spill is a spill of oil containing less than 50 ppm PCBs that: ? Does not meet the criteria for a de minimis spill; ? Is not totally contained in an impervious structure, such as a manhole, vault, or moat, and Environmental Detailed Incident Report E2MIS 13–OCT–2003 10:14:46 Page 3 of 6 ? Does not meet at least one of the following criteria: ? No sewer or waterway is affected, and ? No private property is affected, and ? No personal injuries are involved, and ? Cleanup is completed within 72 hours of the spill discovery, and ? Less than 50 gallons of oil, petroleum product of any kind, or dielectric fluid is spilled. (2) Material spilled/discovered: Oil (type); PCB concentration: less than 50 ppm; known / unknown. X Dielectric fluid; PCB concentration: less than 50 ppm; known / unknown. If unknown PCB concentration, was sample collected? Yes No (3) Sample submitted for analysis? X YES Sample ID No. 98–13414 No For what parameters? Caller Remarks:

caller states spill from the oil delivery truck to one of the boxes - i/f/o the residence - spill is contained and cleaned  
 pending sample results - coned #151164

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SAWYER Related to previous spill - Sawyer is lead. (JHO)

~~~~~ Con Ed e2mis no. 151-164 notes: On11/17 @ 10:35 discovered in S-12582 approx 25 gallons of what is suspected as Heating fuel oil. It has an odor and the Bldg. Super reports to the Finder that a Fuel oil delivery was made a few days ago and a

spill occurred. This is a third party spill. Three samples will be taken for PCB, ID and flash point.

In addition this incident was discussed with ERT, Dan Pontecorvo at approx. 10:45 hrs. It was agreed that we should wait for sample results before we initiate the cleanup unless a governmental agency directs us to start the cleanup immediately. Since this is a third party spill we should submit the cleanup charges to the third party for reimbursement after the cleanup is completed.

Lab Sequence Number: 03-09326-001 Analysis indicates the presence of a substance similar to a light fuel oil. Lab Sequence Number: 03-09325-001 TOTAL PCB: 4 ppm Lab Sequence Number: 03-09325-002 Flash Point, PMCC > 140 deg F

12/01/03 Underground/cleanup supervisor called to report that the cleanup was completed at 13:10 There was 1 barrel filled with ppe & oily dirt generated as a result of this cleanup. The tanker removed 125 gallons of oil/water mixture. The structure was double washed with slix.

Caller Remarks:

2 7500 gal burried tanks – both tanks recieved an oil delivery at the same time – a short time later 1 tank indicated a large loss of product – oil seeping through wall into basement – tank has been emptied and clean up being done

DEC Investigator Remarks:

6/7/07–Matthew Klaas (Albany DER) –Contacted AVJ Realty Corp. at 914-963-5160, was informed that Mr. Korn had retired several years ago but was put in contact with David Lyons at 914-963-5160 ext. 29. He recalls the spill and problem and says it was completely taken care of at the time and that it is totally documented. He needs some time to retrieve the documents and then he

will send them to me for confirmation.

6/13/07 –Matthew Klaas (Albany DER) –Wrote a letter to David Lyons of AVJ Realty at 733 Yonkers Ave Yonkers, NY 10704 asking for the information I requested over the phone.

10/12/07 – Mike Komoroske (Albany, NY) –Received a call from a Barbara Martinsons, President of AVJ Realty Corp at 914–963–5160 ext 12. She was responding to a letter from Martin Brand (who was not in the office today) of this office requesting documentation of tank/spill closure. She was under the impression that the spill had been closed and was appreciative that the DEC called to her attention that it wasn't. Tank has been replaced and documentation provided by NYC. She is going to hire a contractor to determine condition in the subsurface. Hopes to hire contractor within a week or so. She will then provide response to letter with documentation of tank replacement and the subsurface investigation report which hopefully will be sufficient to close the spill.

10/17/2007: Received from Barbara Martinsons (AVJ Management Corporation) documentation regarding installation of new tank, closure of old tank, and new PBS certificate for new tank. M. Brand NYSDEC DER Albany

transferred back to Region 2

3/11/08 – Austin – Reassigned to Rahman for further investigation – end

03/18/08 According to 11/07 investigation by IVI Environmental, light petroleum non-aqueous phase liquids(LNAPLs) were identified below the sub level boiler room,oil was observed seeping through the basement wall.According to IVI, four soil borings were advanced, ground water was encountered at two inches below the floor slab. Free product layer was observed in one of the borings, free product emulsion was found floating at the surface of the remaining three borings. ATC performed Phase II investigation in 01/08.Eight soil borings were performed, six in the sidewalk, two in the basement.None of the soil borings outside of the boiler room encountered petroleum impacted soils.LNAPL was observed floating on the surface of the groundwater at borings SB-08,SB-11,and SB-12 and trace product at SB-07.VOCs/SVOCs in soil analyticals were below TAGM.The boiler room extends 10' deeper than the rest of the building, the bed rock was carved out to create the basement.(sr)

4/1/09 – Austin – Transferred from Needs Reassignment to Rahman for further work to remediate and close – end

04/09/09 Reviewing closure report.USTs are located adjacent to the boiler room, below the basement floor.Soil borings advanced outside of the boiler room encountered refusal on bedrock.None of the soil borings outside of the boiler room encountered petroleum impacted soils.In May and November of 2008 four EFR events recovered approx. 4,760 gallons of liquids(LNAPL and water) from below the floor slab of the boiler room.Following the second EFR events in July 2008, LNAPL was not observed in any of the recovery points. During the six inspections following the last EFR event on November 2008, only a sheen and products globules were observed in four recovery points.Inspections in Jan and Feb 2009, only a residual sheen was observed in one recovery point.Therefore, ATC concluded that all reasonably recoverable LNAPL has been removed from the subsurface.Furthermore, given the nature of the No.6 oil(high viscosity and low volatility), the location of the boiler room, and the placement of the epoxy coating on the walls and floors of the boiler room and the adjacent AST vault(located on top of one of the closed USTs), any residual fuel oil is not likely to pose a risk to human health or the environment.ATC recommended that all recovery points be backfilled with concrete and coated with the same epoxy coating as the rest of the boiler room floor, the boiler room floor be inspected periodically to assess its integrity. In February and March 2009, True Blue Environmental Services power washed the lower four feet of the walls and the floors of the boiler room and AST vault. The floors and walls were sealed with ArmorSeal

1,000 HS Epoxy Floor Coating.NFA required.(sr)

Caller Remarks:

FOUND CONTAMINATED SOIL DURING TESTING

DEC Investigator Remarks:

10/10/2007 Sangesland left a voice message with Mr. Parekh at EEA, asking for the name/address for the property owner or manager to send a CSL.

10/15/2007 Property Manager is: John Walpole 212 874 1434 – 11 Riverside drive Corp., New York, NY 10023

Building is a 16 story apt building that had 2– 25,000 tanks closed in place in backyard (work was done by someone else in summer 2007). EEA was hired to do soil boring testing around these tanks in Sept 2007. 5 borings were taken and some minor VOC and SVOC hits were found in soil samples. They took one groundwater sample which came back clean. EEA will send a closure report in to DEC. They do not expect to do any additional work and would like a closure based on the hits being minor.

11/07/07–Vought–Reviewed Phase II Subsurface Investigation Report (EEA Hardik Parekh Ph:516–746–4400 fax: 516–746–4432) dated September 2007 and received 10/23/07. Site is 16 story residential apartment building. Two (25000–gallon) #6 fuel oil USTs abandoned in place previously. Five soil borings installed around USTs. Groundwater at depth of 15'bg and one groundwater sample was collected. Letter requests No Further Action. Soil analyticals show: 1380ppb xylenes (B4 10–12'bg) and some minor PAH exceedences attributable to fill material. Groundwater analyticals show no TOGs 1.1 Groundwater Exceedences. As per Chart, tank invert is 11' below grade. No borings performed in expected downgradient location. Vought called Hardek and he will be out until December. Vought left message with Nicholas Recchia that scaled site plan is needed. Vought received call back from Recchia that he will submit scaled site plan.

DEC requires: 1) scaled site plan to ensure that gw sampling location is proximal to abandoned UST location and upon submission possibility of downgradient sample collection 2) cc to Recchia

12/5/07–Vought–Received call from Parek and he will submit scaled site plan.

12/13/07–Vought–Received scaled site plan that shows B5W 2' away from former UST location that extended to a depth of 15–17'bg. Vought called Parekh for distance of B2 away from USTs and B2 is approximately 2'6" from UST. Spill closed by Vought as soil samples were close enough and deep enough to characterize soil conditions below tank invert.

Caller Remarks:

caller states that the oil co made a delivery to the house across the street on thursday. and caller still has an odor of

heating oil in his basement. would like a call back

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 1/12/2002–Tim Demeo and Jeffrey Vought (NYSDEC) respond to spill by site visit. Investigation of the residence showed that odors were originating from hole in a schist cobble wall facing 84th street in the former coal chute in the basement. Investigation of neighboring residence 334 West 84th street also yielded odors through the cobble wall facing 84th street. During the site visit the caller (Mr. Rafferty–336 West 84th) indicated that there was a previous spill a week earlier across the street at 337 West 84th Street. Discussion with the superintendent of 337 (Willie 212–926–0633) yielded that Petro Oil company was the delivery company which caused the spill. Petro was called by the NYSDEC and responded by immediately hiring Milro Associates (Paul Basso 516–379–1500) to perform the investigation and cleanup.

1/14/2002–Milro performs site visit to investigate the problem. Milro (Paul Basso) proposed to immediately address the health and safety concerns by sealing the basement walls of both 334 and 336 west 84th street with mortar and epoxy. NYSDEC approved the proposal. Gary Morgeran (owner of 334 west 84th) approves of the sealing. Mr. Rafferty rejects the proposal. Milro then offered the temporary solution, also approved by the NYSDEC, of installing plastic sheeting and an air filter and blower to ventilate the basement. Mr Rafferty requested that no filters be installed because he had purchased two filters already. He also requested that no blower be installed because of security concerns through the trap door to the basement.

1/18/2002–Plastic sheeting installed in 336 and air filters installed in 334.

1/28/2002–Meeting held between the NYSDEC, Milro and their subcontractor Lutz Environmental to review the boring locations. Two borings in front of 337 and one boring in front of 336 and one in front of 334 were proposed and agreed upon.

2/21/2002–Milro after learning that they can't obtain the permits because they are not the drilling company refers the task to Lutz. Lutz finally receives the sidewalk permits after a long process of contacting the NYCDOT and schedules the drilling for this day.

3/5/2002–Milro sends Mr. Rafferty a sidewalk repair letter (at Mr. Rafferty's request) stating that the boring locations will be backfilled and patched to grade. Mr. Rafferty rejects the letter and requested Milro replace the entire 18'6" of sidewalk.

3/13/2002–Milro sends Mr. Rafferty's request to Petro who forwarded it to their insurance company (Crum & Forster– Donna Matt (888–890–1500)). Crum & Forster replies stating that their company would bear full responsibility for the sidewalk....even if that meant replacing the entire sidewalk. Mr. Rafferty rejects the request and says contact his lawyer and he will not approve of any work in front of his house. Investigation of DOT regulations indicated that the sidewalk is considered public property and Mr. Rafferty has no authority to prevent borings. Consultation with NYSDEC supervisor R. Austin results in decision to move borings into street if Mr. Rafferty does not approve of sidewalk work. An additional attempt is made to contact Rafferty (a message was left) to notify him that Crum & Forster is willing to replace entire sidewalk and that NYSDEC may install borings in street once DOT can be contacted for approval.

3/14/2002–Left message for Rafferty to call NYSDEC 3/15/2002–Left message for Rafferty to call NYSDEC 3/19/2002–Left message for Rafferty to call NYSDEC and was told by his secretary that he is away on vacation until mid–April

3/25/2002–Due to lack of contact with Mr. Rafferty and necessity of data points in front of his home (the original location of complaint) the NYSDEC attempts to obtain sidewalk permits in front of his house by leaving a message with the NYCDOT (Harvey Woods 718–780–8140). Drilling on north side of street is scheduled for 3/29/2002.

3/29/2002–Mr. Woods is contacted and explains that Mr. Rafferty's permission for the permit is not need as long as a letter is supplied from the NYSDEC which explains the necessity of the work for health and safety reasons. Drilling company is on-site and unable to gain sidewalk access to due parked cars blocking the sidewalk. Drilling will be rescheduled for a time during street cleaning (Mon or Thurs). Drilling is rescheduled for 4/11/02. Borings will not be able to be performed on sidewalk in front of Rafferty residence because application with NYSDEC letter cannot be processed in time. NYSDEC will schedule these borings and submit the required paperwork as soon as possible.

4/11/02–3 soil borings are performed on the north side of the street. Refusal at 9.5' on bedrock. No PID readings, staining or odor. Inspection of Rafferty basement shows that petroleum odors are no longer emanating from hole in basement foundation.

Rafferty is called by the NYSDEC and told that there are no longer any odors and that the soil samples across the street next to the source of the spill show no contamination. NYSDEC suggests that the overflow of the tank had entered the drain at the bottom of the stairwell. This caused a slug of contamination to enter the sewer system and both residences across the street. Repeated rain events had washed the slug into the through the system and away from the Rafferty and Morgeran residences. Mr. Rafferty is told that the NYSDEC would like to take a confirmatory sample to ensure that there is no longer vapors in his home. Mr. Rafferty agrees to air sampling.

4/22/2002–NYSDEC receives soil analyticals from boring on north side of street. Analyticals show minor exceedances of SVOC compounds which can be attributed to fill nature of soil. No naphthalene, anthracene or other compounds indicative of fuel oil are present.

5/3/02–Left Morgeran message to make appointment to confirm presence of odors in basement.

5/7/02–Morgeran called and no answer of phone. 5/9/02–Morgeran called and no answer of phone. 5/10/02–Morgeran called and no answer of phone. 5/13/02–Inspection of Morgeran residence also yields no odors. 5/24/02–Receive message from Rafferty that when he turns off air filter he still smells oil.

5/24/2002–Rafferty's message is returned and NYSDEC leaves a message requesting a time to collect an air sample for laboratory analysis. 5/28/02– Rafferty is left another message to arrange time for air sample collection 5/29/02–Rafferty is left another message to arrange time for air sample collection. 6/7/02–Rafferty is left another message to arrange time for air sample collection. 7/12/2002–Rafferty is left another message to arrange time for air sample collection. 8/08/2002–Rafferty is left another message to arrange time for air sample collection and is also told that the spill report is registered to his property and that it would be in his best interest to call back.

12/8/03 TJD Based upon the results of borings and non cooperation of affected party spill has been administratively closed.

oil discovered in manhole

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS Notes #142176

On 4/9/02 at 11:27 L. First # 04738 Project specialist called to report that at 09:30 M. Gilson # 17065 of the I&A had found 1 gallon of residual fuel oil mixed with 500 gallons of water. This is in Vault-5535 & is located at 210 W. 89 St. He was there to do a disconnect. This substance was from a prior spill see incident # 122376. This will be a third party spill. A tag will be hung # 10792 (R. Biliski # 04919 I&A supervisor called with the tag #) No smoke or fire was involved. No sewers or waterways were affected. There is no movement on the water. No injuries were related to the spill. Weather conditions do not contribute to the hazard of the spill. No private property affected. The cleanup will start immediately, there is a tanker on location already to pump out the water from this location due to the sealed drains.

UPDATE 4/9/2002 @ 17:13 HRS

Spoke to Biliski # 04919 I & A, and he informed me that as of now the cleanup is complete. He needs to wait approx. a week to see if in fact the historic spill of oil leaking into the structure is stopped. I down-graded the incident to a spill-unknown oil for this reason stated above.

Yesterday, 4/30/02, MEHS, I&A, flush operations and SESCO were present @ V 5535 IFO 210

W.89th st.

Following a predetermined designed template, holes were drilled and a new to the site material (Duro Soil) was injected into these holes to waterproof and correct

the continuing but slight 3rd party fuel oil migration being experienced into the vault.

After a short curing period, the vault will be re-cleaned and oil leak monitoring will again begin.

Call with any questions

UPDATE: 7/16/02

See e-mail from Frank Romano, Manh. EH&S to R. Pellegrino, Manh. Envir. Desk dated 7/15/2002:

Bob,

Please update the E2mis report for the work completed @ 210 W.89th st on Friday June 14,2002.

This work included participation from I & A for access, Flush to dewater (150–200 gal) and pressure clean vault, and corp. transportation to stand by an with an

<50 tanker.

Vendor SESCO inspected , drilled a new hole matrix and inserted 20 gallons of 3M 5600 grout in this matrix.

I am requesting a return to the site on Friday July 21,2002 , to allow SESCO to remove remaining grout plugs

and thoroughly inspect for any further oil leaks or product migration.

The work should be completed within a 4 hour period.

Please provide and confirm that an I & A crew will provide access

I met with Bob O'neil this morning @ the site after the injection plugs were removed and the vault was thoroughly cleaned and inspected. No new oil was apparent We will re-inspect Thursday (7/25) for steam genny Friday(7/26) if no further oil leaks or migration is experienced over the coming week.

Dan

We're out on this location this morning. Previous attempts to seal this location have not been successful, however, the amount of oil seeping into the structure has been reduced significantly. If in fact the oil has stopped seeping into the structure, we'll be employing the following plan to get a unit installed.

1. Verify today that the oil is not migrating into the structure.
2. Next Friday, have Brooklyn Environmental Ops soda blast the walls to remove any oil which has been absorbed by the concrete.
3. Monitor the structure for 1 week for signs of oil either seeping into the structure or leeching from the walls. If necessary, have the structure soda blasted again.
4. If everything goes well, the unit can be installed in about 3 weeks. I know that might seem long. The history on this

structure is that it has thwarted every

effort control the oil. I don't want to drop a unit until I'm sure the oil is under control.

Walter

I could use the assistance of Brooklyn Environmental with a difficult cleanup location. I have a vault 5535 F/O 210 w.89th st which is a long term remediation project. The vault is in an area where there is a fuel oil leak from a nearby building. Rather than wait for the building to cleanup the spill, we moved forward with sealing the vault. After numerous attempts, the sealing looks like it has worked and there is no oil migrating into the structure. The is oil seeping from the walls which I suspect is oil absorbed by the walls during the initial leak. These have proved difficult to clean effectively. I would like to have your crew use your soda blast to clean these walls. I have attached a copy of the oil sample. The parking days are Tuesday & Friday 8-11am.

UPDATE: 8/05/02

Bob O'Neil, I&A North Planner made arrangements for this vault to be cleaned again by the special Brooklyn/Queens Environmental Operations team with their steam cleaning and soda blasting technique. The cleanup is scheduled for Tuesday, Aug. 6, 2002.

UPDATE 8/6/2002 @ 18:09 HRS

Mike Knox #38504 of Brklyn/Queens Envir. reported that the cleanup was completed @ 1745 HRS on 8/6. Mike Knox states that the walls are still stained. No solids were removed. 300 gallons of water and cleaning fluids were removed. The structure was double-washed with 35 gallons of BIO-GEN. The walls and floor were steamed cleaned. The crew used 7 bags of baking soda via the Soda blast technique. The Environmental tag # 10792 was removed.

Austin - 8/19/09 - See spill # 9810768. Remediation work of tank rupture in apartment completed in 2003 (note: unable to clean around Con Ed vault due to sability issues) Spill # 0200291 closed, based upon work under # 9810768 - end

HAS BEEN CONTAINED; NOT YET CLEANED;

DEC Investigator Remarks:

12/28/06–Hiralkumar Patel. spoke with Noel at Stuyvesant fuel. he noticed oil coming through wall where fill line runs. believe fill line leak. Stuyvesant spred speedy dry and absorbent pads. they will not do any further cleanup as it is from faulty equipment.

12/29/06–Hiralkumar Patel. visited site. site has 5000 gal tank sitting on concrete block, about 1–2 ft higher than floor, inside concrete vault with access. observed oil stain on wall where fill line enters into tank room. all lines are aboveground except part of fill line that runs under sidewalk. looks like fill line has leak for long time. no oil stains on floor around tank except one area, which is left side of tank room entrance. absorbent pads were there and found free product under it. there is small window on wall right above this oil stain and found small opening between tank room and boiler room wall. found free product in this small opening also.

spoke with Jacob Sirotkin, property manager. Jacob told that he has hired ABC Tank for spill cleanup. he already asked his oil company to stop further delivery. Jacob mentioned that his plumber will open sidewalk and will replace leaking fill line and then ABC will remove contaminated material from site. told Jacob that as tank sitting on concrete, the Department requires tank test. also told him about oil stain and free product on tank room floor and between tank room and boiler room wall must be removed properly.

PBS#: 2–211559

super of building: Rony (212) 712–1609

Jacob Sirotkin (property manger) Jordan Cooper Associates, Inc. 7 Penn Plaza 14th Floor New York, NY 10001 Ph. (212) 613–4611 (O)

(917) 295–7855 (C) FAX (212) 888–0414 Email: jacob@jordancooper.com

received call from Donna (PH. 718–272–2800, FAX 718–272–3147) from ABC tank. explained her about required work. she is preparing proposal for required work and if get approval, will start work on 01/02/07.

sent CSL to Jacob requiring tank test and contaminated soil/material removed inside tank room as well as outside along fill line. letter faxed to Donna at ABC tank. letter emailed to Jacob alongwith PBS correction form as mailing address for management office has been changed.

1/11/07 – Austin – Temporarily assigned to Vought, in Patel's absence

04/05/07–Hiralkumar Patel. left message for Jacob and asked him to submit report by 04/13/07. spoke with Donna at ABC. as per Donna, another person/company replaced leaking fill line, but they did removed 21 drums (18 along fill line on sidewalk and 3 from inside tank room) of contaminated soil and took endpoint samples. endpoint samples are clean. tested tank and found tight. ABC will release entire report as they get paid for work done.

04/12/07–Hiralkumar Patel. received fax from Donna from ABC containing tank test and sample analyticals. tank test found tight tank system. sample analyticals shows soil sample taken at vent pipe. spoke with Donna at ABC. explained her that problem was with fill line as it was leaking. so DEC needs soil sample at fill port and along fill line, not at vent pipe. also asked Donna to send detailed report with observations during line repair, scaled site plan with piping locations, sample location, excavation depth, sample depth etc.

04/24/07–Hiralkumar Patel. received fax from Donna from ABC Tank containing drawing showing sample location. they took soil sample along fill line. no word about depth of excavation, depth of soil sample at fill line, reason for oil found on floor along wall between tank and boiler room. spoke with Jacob. he will meet at site.

04/25/07–Hiralkumar Patel. visited site on 04/24/07. met Jacob on-site. oil stain found on wall where fill line enters into building. area, where oil found along wall between tank and boiler room, has cleaned up and that is lowest part in tank room. no more oil found in that area. based on site observations and oil stains on tank room floor; oil, that was found on floor along wall, could have accumulated in the area that was leaked into tank room from leaking fill line. as per Jacob, ABC dug about 8 ft deep along entire fill line and removed contaminated soil. also they powerwashed tank room, twice. no odors inside tank room.

based on observations during site visit and available documents, case closed.

DEC Investigator Remarks:

e2mis no 155122

Meledez and crew discovered fuel oil had been spilled or had leaked from a from an unknown 3rd party source. He goes on to report that the fuel oil has leached down from street into service box and looks like approx. 1 gallon on top of approx. 50 gallons of water. At this time no oil truck is in the area, but he does feel that this is a 3rd party spill due to the smell of the fuel. Two samples taken PCB & ID, & Flash Point. Clean up pending lab results.

Lab Sequence Number: 04-06889-001 – PCBs < 1 ppm, Flash Point, PMCC > 140 deg F

9/24 AT 12:00 On 9/24 at 11:40 Maiurro # 16702 of UG reported to me that the cleanup completed as of 11:00 HRS on 9/24/2004. PPe's were disposed as solid waste. The tanker removed 200 gallons of mixed liquid. The structure was double-washed with SLIX . The Environmental tag # 18517 was removed.

NO MATERIAL INFORMATION GIVEN FOR THIS SPILL

Caller Remarks:

Contaminated soil found during the pipe enhancement project performed by Con Ed.

DEC Investigator Remarks:

Contaminated soil found during the pipe enhancement project performed by Con Ed.

8/25/14: Mahat DEC Mahat responded to the site to investigate reported historical spill on the site. Contaminated soil was observed on the vicinity of the fill port. DEC partnered with Super of the building to perform a pressure test on the fill line. A spill will call in the property based on the site visit. Spill is coressed referenced to spill # 1405504.

Peter Soler

**** Super attendant 347.408.9201

8/26/14: Mahat DEC Mahat contacted Mr. Soler inquiring about the process on pressure test. He mentioned a boiler company is schedule to have the fill line presseure test on 8/27/14.

09/02/14: Mahat DEC Mahat received an email from Mr. Higgins mentioning that the pressure test was done on the fill line and it passed the test. Below is her email :

Santosh- We have been advised by Riteway Tank Maintenance Corp that the oil fill line has successfully passed the pressure test of the fill line at the above captioned location. I am sending a copy of the Affidavit from Riteway under separate cover. Thank you. Marina

The fill line test is uploaded on the D2. Hence, the spill was not fresh and this was a historical spill and no further action is required by the Department. No sample were taken and mechanical room was in the best shape possible. Based on the fill observation, test result and background search, the spill will be closed in the database. DEC Demeo was also involved in the case as a mentor. No more requirements by the Department.

about 25 gallons spilled.spill hasnt been cleaned up yet.

DEC Investigator Remarks:

10/20/2004 Sangesland spoke to Mark at PTC. Cross ref prior spill #0105791 Sangesland requested PTC to perform a tank test on this tank.

12/19/05 Feroze. Spill is transferred from Ketani to Feroze.

12/21/05 Feroze. Talked with Mr. Robert Trebino, the property owner and sent him a letter to submit DEC Tank Test Result.

02/02/06. Feroze Called Mr. R. Trebino(212-284-3795) and left a message for him. PBS case of this site is # 2-112399. According to PBS documents they have one tank of 20000 gallons capacity and it is vaulted with access.

02/21/06. Feroze Called Mr. R. Trebino and left a message for him.

02/24/06. Feroze talked with Operator (212-362-1137) of that building. He told me that building Engr. will call me regarding the issue. Cross ref prior spill #0105791. Building Engr. told me to talk to Robert Trambino. 03/02/06 Feroze talked with Robert. He is requested to submit the documents that he has repaired the tank and the system. Fax no of MR. ROBERT 212-742-2626.
 03/15/06. Spill is transferred from Feroze to Kumer Patel.

03/28/06-Hiralkumar Patel. Left message for Robert, property manager and for Mark at Petroleum.

03/29/06-Hiralkumar Patel. Spoke with Mark at Petroleum. he told me that he visited site first in end of 2004. at that time he removed oil/water mix from tank room and he left. when he left site, it was required to wash that room. then Mark got call again

from this site in January this year. when Mark visited site again in Jan. 06, he found that room was flooded again with water having oil on top of it. Petroleum has sent out proposal for cleanup and the owner/manager was not agree with this proposal. Mark doesn't know after that. Spoke with Robert and he told me that the person handling environmental matter at this company is out for vacation and will be back on Mon Apr. 3.

03/30/06–Hiralkumar Patel. visited site at 10:00 AM. Met with Robert Trombino, manager of property and Miro Kormanik, super of building. super is working here for last five years. property has 20,000 gas tank in basement. tank is on legs and have access to bottom of tank. no significant oil on tank, means no leaks from tank. at the time of visit, little water was on floor. no signs of oil on remaining water. floor in in bad condition. one spot of concrete floor was popped up due to underground water pressure. as per super, water is coming into boiler room throughout the year through this open spot. the walls of tank room are in good condition except one location. tank room wall towards street side has approx. 10' long crack and this wall is closest side of building wall to the fill port. this crack is approx. 25' below street level. tank room ceiling is about 10' deep than street level. wall below crack has oil stain and it was shining at time of visit. but no odor in tank room. fill port is on 68th street about 8–10 ft away from building wall. when current super started working at this property, they had same situation of water and oil mix into tank room in 2001. at that time, DEP and fire department responded to site. DEP had took samples and found little oil floating on water. when they had problem in 2001, somebody tested tank system and found fill line was leaking. and they had replaced old fill line and put new line at different location approx. 5 ft away from old fill port. during replacement they have dug out some soil but didn't do any soil investigation. it looks like whatever oil they lost from old fill line leak was coming into tank room through that crack in wall. super doesn't know who removed that oil/water mix from location & tested system and replaced line in 2001. asked super to call back with this information. as per super, water keep coming into tank room after cleanup. Spoke with Mark at Petroleum. as per Mark, they had removed 3700 gal of oil/water mix in end of 2004. when he visited site in Jan. 2006, he found approx. same amount of water/oil at location. the level of oil/water mix was 6–8 inch. and as per property manager Mr. Trombino, nobody has contacted yet for cleanup of tank room after Jan. 2006. but when i visited site, it looks like somebody removed oil/water from location as no significant water level found in tank room. but when i entered into tank room, i found that tank room floor was wet and broken concrete on floor was soaked with water. Spoke with super and he told me that nobody cleaned room after Jan. and as per him there was no water upto 6–8 inch in tank room ever. as per super, water level raise upto 4 inch in lowest part of tank room which is under the tank. no odor complaints in building. super doesn't have daily inventory of oil usage. they order about 6500 gal each time and delivery frequency is depends on whether. they are using #4 heating oil, but PBS record shows #2 heating oil. asked super to submit PBS registration form with necessary corrections.

Discussed with DEC_Austin. as per Austin, i asked Mr. Trombino to call city DEP to find out source of water coming into tank room and to workout to correct any defective water line under/near property. as per Austin, this tank would consider as AST as you can look under and around tank. he suggest me to ask property manager for line tests to find out is any line leaking or not.

Letter sent out to Mr. Trombino and faxed to Mr. Trombino and Mr. Kormanik asking for soil investigation at sidewalk on 68th street where fill port is and where fill pipe runs, tank test to confirm any leak and groundwater samples at sidewalk. letter faxed to manager and super.

Robert Trombino (property manager) Cammeby's Management Co LLC 45 Broadway 25th Floor New York, NY 10006 Ph. (212) 509–9797 Ext.3795 FAX (212) 509–5229

Miro Kormanik (super) Cammeby's Management Co LLC Ph. (212) 362–1159 FAX (212) 362–1491

04/06/06–Hiralkumar Patel. Received call from Abraham from NYCity tank test company (718–731–7011). he did tank test and tank

passed. he has replaced manhole gasket and petrometer. he will take required samples and will submit lab results to Department. Received fax from New York City Tank Testing Inc. showing tank passed in test.

04/21/06–Hiralkumar Patel. Received call from Abraham from NYCity Tank test company. he was suggesting to take groundwater sample from the inside of the building. and will take two soil samples from the location specified in letter.

05/16/06–Hiralkumar Patel. Spoke to Abraham at NYC Tank Test. they took samples on Mon. May 8, 2006 and waiting for lab results. will get lab results probably end of next week. will call once get lab results.

06/06/06–Hiralkumar Patel. Spoke to Abby. he doesn't get results yet. 06/12/06–Hiralkumar Patel. REceived fax from Abby, contains lab results. soil sample was taken next to the fill box at a depth of 3 ft. further penetration was not possible due to an underground vault. water sample was taken from under the tank room. water sample has naphthalene exceeding TGAM limit, but because of little exceedence, DEC Austin suggest to close the case. Spoke to Abby at NYC Tank testing. as per him, there is water table at about 12–15 ft below street level. building wall close to street side has 10 ft crack and it is about 25 ft below street level and as per Abby's information, this crack must be below water level. at time of site visit, i have observed oil stain below this crack.

Left message for Mr. Trombino to send final report. asked to clean all stains from wall and to seal all the cracks inside tank room. asked to send color photographs after cleaning and sealing of tank room.

06/16/06–Hiralkumar Patel. Received message from Mr. Trombino. Left message for Mr. Trombino. 07/10/06–Hiralkumar Patel. Left message for Mr. Trombino. 07/13/06–Hiralkumar Patel. received message from Berny (917–648–5551) from NYC Tank testing. spoke with Berny. they have cleaned wall stains and sealed it. he will check about floor and once done will send final closure report.

08/10/06–Hiralkumar Patel. spoke with Berny. he will send final report in next week. 08/23/06–Hiralkumar Patel. spoke with Berny. he has got final disposal manifest and will send final report in couple of weeks. 08/30/06–Hiralkumar Patel. received letter report through fax from Mr. Bauer from NY City Tank Testing. abstract: – found manhole gasket defective. a new gasket was installed and system was retested and passed – crack in the foundation wall was repaired by chipping 4–6 inches (in depth) of the wall then cemented and water proofed.

found another open spill case at the same site for incident of water flood in 2001. spill # is 0105791. Qasim Abidi in remediation group is working on this old case.

09/06/06–Hiralkumar Patel. received photographs from NYC Tank Testing. based on available information, case closed. refer old spill# 0105791.

09/12/06–Hiralkumar Patel. sent out NFA letter on owner's request. sent copy of letter to Bernie at NYC Tank TEsting and to Qusim at DEC Remediation who was handling case #:0105791.

CLOSED STATUS HAZARDOUS SPILLS – MISC. SPILL CAUSES – EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM AND STORMS – WITHIN 1/2 MILE SEARCH RADIUS.
All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

7-28-05 @ 03:14. S Asfour # 49908 reports that while inspecting v7264 w/s columbus av 50' n/o w 79 st, he discovered 2 gallons of transformer had leaked from the transformer onto the concrete floor and into the sump pit. There was or is no smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. Account # w3282 is being used for this incident. There is a drip rate of 1 drop per 10 seconds coming from the throat of the transformer. No measuring device was used to detrmine the amount of the spill. The trap was checked and there is no evidence of a release outside of the structure. Source of the spill is the transformer and the cause is a leak. No private property affected. Environmental yellow tag # 41945 was applied. Water is standing. No visual water movement. Sump pump was found unplugged. No substantial cracks were observed. 1 liquid sample was taken by S Asfour # 49908 from the spill for pcb. Sample priority e . Chain of custody # dd13320. Oil absobent pads were applied to the spill to contain. Cleanup is pending deenergization of equipment.....J Moran # 01182

DEC Investigator Remarks:

02/14/14--Hiralkumar Patel. alternate address: 35 to 39 W 81st Street

PBS #: 2-063673. as per PBS record, the site has one 7,500 gal #6 oil AST on saddles, in-service.

other spill # 0401022 was reported on 04/29/2004 due to 3 gal of fuel spilled onto about 20 gal of water in ConEd service box. clean up done by ConEd. case closed.

81st Dwellers Inc.

property owner c/o Maxwell Kates, Inc. 9 East 38th Street, 6th Floor New York, NY 10016 Attn.: Mitchell Berg PH. (212) 684-8282

2:01 PM:- spoke with Bill at Preferred. they found #6 oil spill onto tank room floor, due to leak in remote fill line. oil seepage was found in area where fill line enters the building. further investigation will be done, once sidewalk opening permit is received. the site has one 7,000 gal #6 oil AST on saddles. Bill noted about 12 ft by 12 ft area of oil spill onto tank room floor. loose oil in tank room has been cleaned up using absorbent.

2:58 PM:– sent letter to Ms. Berg requiring investigation for contamination, endpoint samples and tank system tightness test. asked her to submit report by the end of 04/30/14. letter emailed to Bill.

03/04/14–Hiralkumar Patel. 10:55 AM:– received call from Bill. he mentioned that during cleanup of loose oil from tank room floor, the contractor (Branch Restoration – an asbestos abatement company) found leak from tank itself. Bill mentioned that contractor was in process of removing oil from the tank. asked Bill to confirm product removal from the tank. he will call back. he also mentioned that there is a scaffolding support column, right near where remote fill line is located. this scaffolding belongs to neighbouring building. informed Bill that the Department requires investigation/cleanup of any contaminated material due to leak in fill line. suggested him to excavate small trench, only if it is safe, to remove remote fill line. otherwise case will remain open until required investigation/cleanup is performed. Bill will talk to property manager/owner regarding possibility of fill line excavation.

03/07/14–Hiralkumar Patel. 2:15 PM:– received call from Bill. he confirmed that a temp tank has been installed on street and crew is pumping out oil from leaking tank today. Bill mentioned that the neighbour, whose scaffolding column is near the leaking fill line location, refused to move the scaffolding without a correspondence from DEC. asked Bill to provide neighbour's contact information.

03/10/14–Hiralkumar Patel. received email from Bill (at 4:58 pm on 03/07/14). he mentioned that all the usable oil has been transferred out of the AST into temporary tank. Bill also sent contact info for neighbouring hotel manager.

Ivan Weiner ~ Hotel Manager Excelsior Hotel 45 W 81st Street New York, NY 10024 PH. (212) 362–9200

03/18/14–Hiralkumar Patel. 9:57 AM:– received call from Bill. he mentioned that the existing scaffolding located on fill line area will be removed and a new scaffolding will be placed on 03/20/14. as such, fill line work will happen tomorrow and contractor will excavate and remove leaking fill line and any associated contamination.

03/19/14–Hiralkumar Patel. 10:30 AM:– visited site. met Dennis (516–672–2308) from Preferred. due to gas line in area and support for temporary supply/return lines from temp tank on street, he was waiting for guidance from his supervisor. suggested him to talk to ConEd, if needed. inspected tank room. the tank is aboveground, sitting on floor. no odors noted around tank. inspected area where fill/vent line crosses the building's southern foundation wall. found oil seepage from fill line area. noted a gas line, about 1 ft below the fill/vent location. during site visit, spoke with Evan, manager of next door hotel. requested him to hold on to scaffolding installation in area of fill line work. he will inform the scaffolding company.

2:30 PM:– received call from Dennis. they opened two sidewalk flags located close to building. he found leak in fill line, along the building's foundation wall. asked him to confirm integrity of remaining portion of fill line, to the fill port.

03/20/14–Hiralkumar Patel. 1:05 PM:– received call from Bill. they found crack in fill line, along the building's foundation wall. they removed about 1 yard of contaminated soil. they dug down to 20 inches where bedrock was found. no more contamination observed in sidewall. as no signs of contamination noted in excavation's southern sidewall (towards fill port and street), they did not remove piece of fill pipe towards the fill port. endpoint samples have been submitted for analysis. Bill will submit report, once endpoint sample results are received. informed him to include information about condition of basement floor underneath the tank (once tank is removed) and observations during fill line excavation including information about piece of fill line left under the sidewalk.

05/12/14–Hiralkumar Patel. 3:20 PM:– spoke with Bill. he will review file and call back with update.

05/13/14–Hiralkumar Patel. 2:38 PM:– spoke with Bill. he mentioned that the tank is removed and will submit report by tomorrow.

05/20/14–Hiralkumar Patel. 4:21 PM:– received email from Bill including spill closure report.

05/27/14–Hiralkumar Patel. based on available information, case closed.

Caller Remarks:

spill to inside and outside/clean up pending

DEC Investigator Remarks:

11/20/13 TJD T/C with Anthony Lara of Riteway Tank – he states the spill was reported due to a preclosing walk-through of property this past Thursday (11/14/13) – pending real estate transaction. Report spill is suspected to be caused by overfill of 275 basement AST. Anthony Lara states the vent piping is dislodged from tank and there is contaminated sand on concrete floor around tank – no separate phase product is observed. The vent pipe outside has some dry staining on wall – appears historical. Petroleum odors are reported to exist inside structure. Riteway has not yet been retained for cleanup – will provide DEC update within a few days. No active leak.

7/8/14 TJD File review. Closure report has been received from Riteway Tank – as per report, spill cause was a faulty gauge on 275 AST basement tank. Riteway temporarily relocated tank to facilitate spill cleanup. Following the removal of contaminated absorbents from the concrete basement floor, Riteway proceeded with an investigation of subsurface soils followed by the removal of 21 drums of contaminated soils to approximate excavation dimensions of 5x7x3 ft bgs. Upon the completion of excavation, residual soils were screened with a PID until no further contamination was detected. Endpoint samples were collected from base/sidewalls of open excavation prior to backfill. A review of the laboratory data from the sampling event reveal all target analytes are within acceptable concentrations. All required closure documentation has been received and uploaded to DECDOCS. No further action is required. Spill closed.

Caller Remarks:

APPROX 35-40 GALLONS TO ALLEYWAY PAVEMENT DUE TO FUEL DELIVERY TO WRONG ADDRESS. CLEANUP PENDING.

DEC Investigator Remarks:

04/03/10-Vought-Primary off-hours responder. Called and spoke to Millie Lopez (Ph:718-579-3413) and spill on concrete due to miss-delivery. Cleanup being performed by Riteway Tank (Anthony Lara 718-855-7270 cell:917-709-3317). Lopez also indicated that spill was in alleyway, no sewers were affected and spill cleaned using speedy dry. Vought called Riteway (Lara) for update. Vought left message for Lara to return call with confirmation of cleanup. Vought spoke to Lara and no oil in basement and Castle cleaned oil out of vent pipe. Lara will call back with further information. Vought received call and spill was to two 1250 gallon USTs and Riteway pumped fuel out of tanks as #6 fuel was delivered to #2 fuel oil tanks. Spill cleaned by Castle Oil and this confirmed by Lara. Vought required possible powerwash of alleyway and Riteway (Lara) to perform site visit to determine if powerwash is warranted. Lara will perform site visit and return call to Vought. Lara noted that impacted debris remained under the stair metal staircase (oil saturated leaves and dirt).

4/6/10-Vought-Called PBS #2-249092 contact Stuart Bardin (Halstead Mgmt Co 212-396-8266) to confirm presence of debris under staircase. Barin on vacation and Vought left message for his emergency contact Gayle Whitney also at Halstead (212-396-8272) to confirm the presence of oil saturated debris under the staircase. DEC Patel performing site visit. Vought received call from Patel who was onsite and had inspected impacted area under staircase and noted difficulty accessing area as well as lack of olfactory odors and that spill was on concrete. Patel noted that spill could be closed. Spill closed by Vought. Vought called Whitney and left message of same.

Caller Remarks:

cause was broken gauge on oil burner in basement. spill occurred on the basement floor and into a sump pump. Unknown quantity.
 Haz-Mat operations number: 212-360-4480

DEC Investigator Remarks:

03/27/06-Hiralkumar Patel. Received spill report during off hours duty on Saturday Mar 25. Spoke with Captain Smith. as per Mr. Smith they have responded to spill and all cleaned up. they have sucked out 120 gal of oil/water mixture from catch basin in boiler room. Visited site. Met with Mr. Chris, tenant and Mr. Joe, a technician who was repairing faulty gauge. as spoke with Mr. Joe, there was a oil leak from pressure gauge on burner. this burner system comes under commercial property management. simultaneously they had water leak from heat pump so oil water mixed in small burner room. this burner room floor has some small cracks and few open spots at wall. some bottles, wood pieces etc. were on floor. when entered into burner room, there was no odor in burner room and the faulty gauge was taken out and pipe was capped with plug. no more leakage observed. there was water on floor close to door leading to walkway towards street. there was one drain in middle of walkway, which is the lowest point of walkway. oil probably went down to this drain. behind the small burner room is the large boiler room having two boilers in it. this boiler room comes under residential management property. and wall between burner room and boiler room has openings between bricks. and as nobody knows what time leakage started, oil went down to large boiler room. this boiler room has one catch basin in corner and one drain in middle of room. spoke with super Mr. Dexter Ghent (ph. 212-362-5108) who is handling residential property. as per Mr. Ghent they have made boiler room floor in last november and drain in boiler room is inactive leading nowhere and filled with cement. floor didn't have any cracks. the catch basin is in corner of boiler room near the entrance door. fire department has removed 120 gal of oil/water mix from this catch basin. as per Mr. Ghent they only run sump pump only they have any water in it. and they never run it in last three months. so no oil went to city sewer system through catch basin pump. fire department has cleaned this boiler room with speedie dry, but there was still strong odor in boiler room as wall toward burner room had little oil on it. this boiler room has one door and one small opening at other end in wall between burner room and boiler room. small fan was running inside boiler room throwing out air from boiler room as door kept open, but this fan was not

sufficient. there were no odor in other part of building or upstairs in commercial/residential area except that large boiler room. commercial facility using #2 oil and residential facility is using #4 heating oil.

based on site observations, i recommended Mr. Ghent to replace soaked speedie dry with fresh one, to remove remaining water from catch basin, put some absorbent pads to remove any oil left in it, to put one big fan outside of boiler room to throw out large amount of air before entering into boiler room for cleaning as they don't have any experience in cleaning oil spill. also asked him to clean burner room as it still had water on floor. Talked with Mr. Jim Reid, who is manager of commercial property, and asked him to clean both burner room and boiler room. also asked Mr. Reid to contact environmental consultant to remaining cleanup and investigation.

Jim Reid 101 W 70 Street Manhattan, NY 10023 Ph. (212) 712-6182 FAX (212) 724-6386

ADDRESS for residential property: Endicott Apartments 101 W 81st Street Manhattan, NY 10024 Ph. (212) 362-5108 FAX (212) 362-0970

because of possible discharge of oil into city sewer through drain in walkway, notified DEP. DEP case # 1307993

03/28/06-Hiralkumar Patel. Spoke with Jim Reid. as per Jim there is no more odor in any part of building. all cleaned up. contaminated material disposed off from site. Spoke with Mr. Ghent on site and there is no more odor in boiler room. there are no cracks in catch basin floor. all cleaned up.

CSL sent out requesting summary of cleanup process, condition of floor and color photographs of floor after cleanup.

04/18/06-Hiralkumar Patel. Received letter and photographs from James Reid. - cause of spill was a faulty pressure gauge on the boiler - fire department vacuumed most of the oil into one 55 gal drum and two 15 gal drums - removed remainder of oil with absorbent material. - condition of the impacted floor area is completely clean of any oil. the composition of the floors are concrete. the floor area in spill has a few small cracks. the floor area in residential boiler room is a new concrete floor, with no cracks. - sump pumps in boiler room were disconnected, removed and cleaned.

invoice from Petroleum Tank Cleaners and contaminated material disposal manifest also attached with letter. photographs looks clear.

Left message for Mr. Ghent. Spoke with Mr. Ghent and he doesn't have any odor complaints. based on available information and photographs, case is closed. NFA letter sent out to Jim Reid. Faxed to Mr. Reid and Mr. Ghent.

Caller Remarks:

Gauge not working correctly on bld equipment, millro en rte for c/u

DEC Investigator Remarks:

5/1/15: Mahat DEC Mahat contacted Mr. Joseph Zubin @ 347.539.1477 United Metro Energy inquiring about the spill and its nature. Spill occurred during the delivery due to faulty electronic meter and petro-meter. Approximately 10 gallon #4 fuel oil was strictly spilled from the vent line impacting the soil/ grass under the vent port. There spill inside the building. Milro Environmental was on site to remove the contaminated soil from the site and collect an end point sample for the confirmation. A spill closure report including manifest will be submitted to DEC Attention.

PBS: 2-420999

An email was sent out to the management shortly after the phone conversation to repair the spill prevention equipment.

Mr. Howard D. Ohayon,

As per our phone conversation, please provide the confirmation that petro-meter has been fixed and properly calibrated prior to next delivery. Once, I reviewed the confirmation I will promptly remove the hold status on my database.

Let me know if you have any question and concerns about this email.

DEC is waiting for spill closure report and spill prevention equipment repair report.

05/07/15–Hiralkumar Patel. 8:37 AM:– received email from Dot including lab result of four soil samples. soil samples were collected from bottom, east sidewall, west sidewall and north sidewall. no contamination noted in samples. Dot inquired if they can backfill the excavation. email is missing information about excavation size and south sidewall sample result. 2:13 PM:– sent email to Dot and asked to submit site map with excavation dimensions and sample locations. 2:48 PM:– received email from Dot including site map. the south sidewall of the excavation was the building's foundation wall. less than 10 ppm recorded on PID in endpoint samples. excavation was 3 ft by 5 ft by 2 ft in size. 3:15 PM:– sent email to Dot. informed her that based on submitted information, no further remediation is needed outside the building and excavation can be backfilled. inquired her about spill cleanup inside the building. 3:41 PM:– received email from Dot stating that there was no impact to the interior of the building and spill was all outside.

6/16/15: Mahat DEC Mahat received an confirmation from the Management that petrometer has been finxed via email. Petrometer is working fine

Please close file and allow oil deliveries

H. David Ohayon Marbrose Realty 43 west 75 New York NY 10023

07/10/15–Hiralkumar Patel. received email from Dot (at 1:07 PM on 06/05/15) including closure report.

DEC Investigator Remarks:

11/30/2009 4PM – Piper spoke to Millie Lopez at Castle Oil. She was sending a crew to the site to cleanup. Oil came out the vent line onto Cement area and a grated sump like area. Spill is contained and is being cleaned up. Need to call in the morning to confirm cleanup. 12/01/2009 – Sangesland spoke to Millie at Castle. Cleanup was completed, most of the oil was contained in a small grated box area. Everything was contained and cleanup went well.

Caller Remarks:

7000gal agt/unsure if there is contamination under tank

DEC Investigator Remarks:

Sangesland spoke to Jerry at Controlled Combustion. He said the tank is wrapped in cement block in the basement. Oil started coming through the weep holes under the tank enclosure. Tank was drained and temp tank set up. They have the building engineer making drawings for a new tank.

Sangesland asked Jerry to break a 1ft x 1 ft hole near the weep hole to look under the tank and see how much of a spill problem is there. Jerry will do this in the next 1-2 days and set up a time for DEC to visit the site.

12/04/12 AST has been removed from the property. End point sample shows residual contamination within acceptable range. The cement floor under the tank was in good condition. Case closed.(sr)

| #6 FUEL OIL | PETROLEUM | 0 | GALLONS | 0 | GALLONS | |

Caller Remarks:

Caller reporting a spill of #6 Fuel oil to floor. Clean up is pending.

DEC Investigator Remarks:

As per Mark, two problems with this tank.

1) Leaking fill line which runs along an old coal chute to the basement. 2) Tank itself appears to be leaking, but the owners don't want to test it. They need to clean the tank room to be able to monitor if the tank is actually leaking.

DEC recieved clore report documenting cleanup and tank removal. See edocs if warranted. Spill closed.

Caller Remarks:

Caller advised aprx 200 gal of oil spilled into basement. Clean up is pending.

DEC Investigator Remarks:

6/4/14 TJD Teleconference with Frank Galdun (environmental consultant). Two open spills are currently being managed by Patel at this property (1402418 & 1309030). New report is associated with a technician working on heating system who changed position on a temporary valve causing the current tank temporary tank system to discharge return (unburned) product through old out of service overhead piping to the former AST location in an adjacent room. Product migrated over concrete surfaces and entered a sump pit (4x4x3). Super is reported to have contained and recovered most product with the exception of the sump. At time of phone contact – Frank indicated PAL Environmental was retained to pump sump with an expected ETA on Friday 6/6/14. DeMeo informed Frank this plan was unacceptable and reuired the building owner's to retain a qualified contractor to pump out sump, pressure wash affected concrete surfaces (recover wash water), evaluate vapor impacts and mitigate with ventilation equipment as necessary. Zhune was dispatched as AH Secondary to inspect. As Patel has several open spills on this site – spill will be managed to closure with other open spills. Zhune to enter notes and photos from inspection results.

6/6/14– Zhune responded to this site. Met Frank Galdum from Merril Environmetal as per Frank the plumber was doing repair in a pipe around the boiler and mistakenly turned the valve, oil flow throught the abandoned supply line and discharged into the former tank room. The oil moved from the tank room into the sump pump located in the boiler room and into a small area of soil located close to the sump. There was little oil odor in the basement. I inspected the floor on top of the boiler. There are a doctor's office and one apartment in this floor. There was no odors in the doctor office. I spoke to the tenant of the apartment and he said no odor in his apartment. Frank said he was trying to contact the owner of the buidlding to hire a contractor to pump the sump that nigh tbut because of the jwch hollyday could not get him. He said that tomorrow 6/5/14 in the morning PAL Environmental will clean the spill. I asked Frank to cover the sump with plastic and before to leave the site I checked an the sump was covered with plastic.

6/6/14–Frank called and said PAL has couple of days cleaning up the spill. They pumped out the oil from the sump. They are reomving the soil from the small area close to the sump and they are removing the debris from the tank room.

06/16/14–Hiralkumar Patel. 8:04 AM:– received message from Frank. 9:18 AM:– spoke with Frank. he mentioned that someone opened valve on old return line on boiler. so oil spilled onto former tank room floor (as tank removed) and pooled along wall between former tank and boiler room. from there, oil seeped under boiler room floor. currently, contractor is removing floor around boiler room sump and will continue remediation. he also mentioned that no product noted in monitoring well installed in sewer

trap pit area. asked Frank to sent email with update on all three spills.

06/25/14–Hiralkumar Patel. 11:27 AM:– sent email to Frank inquiring update.

06/30/14–Hiralkumar Patel. 9:58 AM:– received email from Frank. this spill was reported due to floating heating oil in the basement sump pit adjacent to the exterior side of the AST vault wall. initially, the accumulated product was thought to have been caused by an oil leak from the overhead portion of the abandoned feed pipe that formerly led from the AST to the boiler. while this pipe did leak a minor amount of product (which was cleaned up), the actual discharge occurred at the base of the feed line in the boiler room (a portion of this feed line is underground beneath the two boilers). the basement floor was opened in this area and impacted soil and free product was removed. in addition, a vacuum truck was used on three separate occasions to remove water and oil from the basement sump. the leaking pipe has been entirely disconnected from the system. a minor volume of water does accumulate in the sump, but it is currently free of product. as a precaution, sorbent pads are placed on the water to absorb residual product that may accumulate but it is believed that remediation was successful. monitoring of conditions in the sump shall be conducted to verify that product is not re-accumulating. the soil removed from beneath the floor slab was resting directly on bedrock. the sump pit is concrete-lined and is approximately four feet wide, four feet long and four feet deep.

09/26/14–Hiralkumar Patel. 4:03 PM:– sent email to Frank inquiring updates. email copied to Mr. Eisenberg.

11/12/14–Hiralkumar Patel. 1:08 PM:– left message for Frank. 1:18 PM:– received call from Frank. they are still collecting minor product from the sump. he will send email with update. 1:44 PM:– received email from Frank including update. two subsequent visits to the Site with PAL Environmental included additional water removal and removal of an additional portion of the floor slab to access and drum oil-impacted fill and rock under the slab. liquids in the sump have also been pumped out on these occasions. the most recent of these subsequent events was Friday, November 7, 2014. at that time product was observed as a slight sheen on the water in the sump with no observed intrusion of additional oil. one final visit will be conducted to clean the sidewalls of the sump and to remove the oil sheen. a full report on the activities completed at the site will be prepared after the final visit.

02/02/15–Hiralkumar Patel. 3:20 PM:– received email from Frank including cleanup report.

02/05/15–Hiralkumar Patel. case closed based on available information. 2:36 PM:– sent spill closure letter to Ms. Eisenberg. letter emailed to Ms. Eisenberg and Frank.

also refer spill #: 1309030 and 1311311.

| #4 FUEL OIL | PETROLEUM | 100.00 | GALLONS | 0.00 | GALLONS | |

Caller Remarks:

caller reporting that a 3,000 gallon oil tank had a spill of approx 100 gallons, spill happened after driver left after filling tank, no resurces affected

DEC Investigator Remarks:

10/7/14–Zhune responded this spill. Met Glen(Managing Agent). As per Glen the building received an oil delivery today. After the delivery someone complained oil smell. Glen went to the basement of the building and search the smell and found approximately 100 gallons of oil #4 on the floor of the basement where a part of the fill line is located. Glen called the oil company. The oil company recommended him to call Riteway. I observed oil on the floor of a store room and oil seeping to the next room. The spill was contained with speedi-dry. There was no odor inside the building. Rite way was on the site doing the cleanup. They are going to perform a subsurface invetigation since the floor was not solid with cracks. Glen also said that apparently the connection of the fill line broke and caused the spill.

3/18/15–David Chan sent the following email. Since the update that Rob Hill sent, the client requested that we type them a letter regarding the additional remediation/work needed for 54 West 74th, so that they can submit it to their insurance company (please see attached). We have not heard back yet from them.

Their contact info:

Marbrose Realty 43 West 75th St ~ suite-C New York, NY

917-751-1478 Contact: Francisco

4/6/16–David Chan from Rite way email two spill closure letters, the site plan, the soil analytical results and waste manifest. The letters stated that Riteway Tank Maintenance Corp. was contracted to remediate subsurface contamination that occurred on October 6, 2014. A total of 23 drums of impacted soil and material were removed from the impacted area. Letter sent 4/5/16 at 4:13pm said a total of 4 endpoint samples were taken on October 28 2014. Letter sent 4/5/17 at 5:16 pm said 4 borings/samples were taken on October 28, 2014.

Samples return November 12, 2104 and all 4 endpoint samples taken contined anlytes from both semi volatile and volatiles organic compounds exceeded NYSDEC CP-51 Soil Cleanup Gidance Policy.

Further remediation of the area is required in order to remove the remaining impacted soil in the excavation. Once all contamination has been remediated an end point sample will be retrieved and sent to a certified lab for analysis.

An additional 63 drums was remediated from the area. Per request of the NYSDEC a water sample was taken of the area due to remediation reaching bedrock as directed, the results returned negative from contamination and within State regulatory limits.

The area is clean and free of contamination.

As per the Riteway letter the area was excavated two times. Soil is all excavated after second excavation. Due to DEC site visit

no further excavation possible due to bedrock on sides and bottom. No sheen on groundwater and spill closed as per discussed with J. Vought.

8/23/05 – Raphael Ketani. Case transferred to Jeff Vought.

09/14/09–Vought–File review by Vought:

Photographs of Cleanup–unknown date. Shows application of boom and sweep and impacted lake shoreline.

Wall Street Journal Article–10/2/91. Title is Oil Spill in Central Park . Spill was 250 gallons of #2 fuel oil. Spill occurred 9/11 when workers at a park maintenance yard near West 79th Street attempted to remove two large oil storage tanks. A connecting transfer pipe snapped and the oil leaked into a nearby storm sewer that empties directly into the rowboat lake. Oil was covering 80% of the lake. Parks Department authorized state to cleanup the spill. Cleanup efforts included boom and sweep. Five days later boating resumed in eastern segment and cleanup continued on more polluted western end. Nine days later after the spill, the state cleanup team had completed its work and both parts of the lake were opened again for boating. .

Article–Unknown Author and Date. Small summary and photo with same info as Journal article above.

Contract Payment Package (Winston Contracting) 9/12/91 thru 10/8/91. Work included boats, boom, sweeping, drums and disposal.

Letter from DEC Tomasello to Thomas Baudanza (NYC Parks)–2/10/92. Enclosed please find the bill for the oil spill cleanup by Winston Contracting Corp at Central Park Lake..... . NYC Parks has opportunity to pay the contractors directly for the work that was performed.

ISR–9/28/92. Signed ISR.

Letter from DEC Plesnarski to DEC Oliver–10/27/92.

The above spill project is recommended for immediate close out by your office since the investigations on each spill indicate either no spiller, no petroleum spilled or no fund monies spent.

Liquid TPH Analyticals (Central Park)–4/9/93. Samples collected on 4/1/93. Analyticals show petroleum constituents all below 1ppb.

09/15/09–Vought–08/17/09–Vought–Vought reviewed site with DEC Austin and spill closed as spill cleanup completed to lake evidenced by photographs analyticals and Wall Street Journal Article and repeated site visits to Central Park lake over the years by Vought. Vought called and spoke to NYSOAG Ross and they have no record of spill (supporting fact that NYC Parks paid contractor directly). Spill closed by Vought. Need for final ISR awaiting callback from DEC Farrar.

08/18/09–Vought–Spoke to DEC Farrar and as Att. Gen. Close Date box is filled out in UIS, no Final ISR needed.

163283.000

DEC Investigator Remarks:

3/10/06, 12:00 PM: Spoke with Mike Pillig, Con Ed Transmission Ops. They suspect it is an inventory issue, not an actual leak. However, they have dispatched the PFT vans to check the feeder run. (JHO)

3/14/06 – small leak located at 84th St. & West End Ave., Manhattan. Excavation will be sampled prior to backfilling. (JHO)

10/6/06: e-mail from Mike Pillig:

Below is a diagram of the excavation and sample results for the 1st round of sampling [SEE E-DOCS – JHO]. The results have been written in on the diagram to facilitate your review. As you will see, there were three samples that were above 10,000 ppm. They were wall samples WW-4 (13,200ppm), EW-2(14,000 ppm), and floor sample SF-3 (30,200 ppm). The rough dimensions of the excavation

are 8' W X 30' L X 8' D. There is one sample that was either lost or not analyzed but I did not resample because we had samples below 10,000 ppm on either side.

We since removed additional soil in the areas of the elevated levels. The walls were resampled in the two locations and the results are below. Both are now below 10,000 ppm.

Lastly, the area of the heaviest contamination, that being the floor was excavated to an approximate depth of 10.5 feet. A sample was taken in the center of the floor slightly offset from the exact leak location. The results, also below 10,000 ppm, are below. Also, there had been a distinct odor of old oil in the excavation up until the last effort to excavate the floor. At the time I took the last sample, the odor no longer was noticeable. Couple of photos for you as well. Close out. (JHO)

~~~~~ e2mis no. 163283: see eDocs

10-Mar-2006 @ 10:25 hours Leak Committee declared a Dielectric Alert on Feeder M51 due to a U.S.I. Leak Detection System alarm of 7 gallons per hour & a approximate discrepancy of 300 gallons. No Oil Leak Has Been Confirmed. The feeder M51 runs between the West 49Th Street S/S and the Sprainbrook S/S. The feeder crosses the Harlem River Between the 155Th Street and 225Th Street Bridges. ERT notified at 10:45 hours to have boat dispatched to patrol River crossing. Chem Lab dispatching PFT vans to patrol feeder run. Gas Corrosion & Transmission Operations dispatched to inspect all underground structures along the run of the feeder. Substation Operations inspecting all associated equipment.

Update, Friday, March 10, 1800 hrs Per Charles Carrillo, Senior Specialist, Transmission Operations, 70 manholes have been inspected and no evidence of a leak has been detected. There are ten more manhole openings (e.g., freeze pits) that need to be inspected. The PFT vans have patrolled the entire feeder run without detecting evidence of a leak.

As of 07:00 3/11/06 all manholes have been checked except for 1 service box. There is a car parked over it and there is no access. Subsurface structures were checked in Manhattan also. ERT boat ran in Harlem River and did not find anything.

At 07:00 3/11/06 Leak committee convened and discussed findings. CSD monitoring of tanks and flowmeters does not show leak trend. USi model has problems with data since bypass valves are open at the cooling plants. Also water loops at W49th St were swapped on 3/8/06 and Sprainbrook Pura shut down on 3/10/06. Model may be slow in responding to changes. Since manhole search was completed and PFT vans did not find any signals, it was decided to stop leak search efforts and continue to monitor USi system.

At approx. 12:00 hrs. during the search for the leak, the PFT van detected PFT in the area of 84th St and West End Ave. Subsurface structures were inspected and approx. 10 gallons of oil in a manhole at the intersection of 84th St. and West End Ave was discovered. Barholes were made and Chem Lab has taken samples from the barholes and PFT is being detected. Trans Ops and the Chem lab are continuing to zero in on the exact leak location. We will continue to barhole and sample until a spot to dig has been established.

Update: Leon Paretsky, Tues, March 14--0930 hrs The leak was located @ 84th St & WEA and clamped at 2030 hrs on Monday, March 14th.

Update: 3/15/06 Presently, an excavation approximately 8'X 8' has been dug to make room for the installation of the permanent repair barrel. We are continuing to dig down below the feeders until the visibly stained soil has been removed. Once the excavation has been completed, we will arrange for post-ex sampling.

**Caller Remarks:**

SLUDGE BUILD UP IN OIL BURNER CAUSED A SPILL, CLEANING UP AT THIS TIME:

**DEC Investigator Remarks:**

07/20/06-Vought-Site visit by DEC Vought and DEC Zhune with super of building (Carlos 212-787-7895). As per Carlos: 5000-gallon #6 fuel oil AST was cleaned on 7/17/06 by Petroleum Tank Cleaners (PTC). On 7/19/06, super was notified by resident of oil odors and discovered spill of #6 fuel oil to secondary containment. As per Carlos, tank was operational after it was cleaned by PTC. A fuel order delivery was also received (Stuyvesant Fuel) on 7/17/06 after the tank was cleaned by PTC. No spill occurred during delivery and at time of DEC site visit no spill was observed out of vent pipe. Tank and secondary containment will be removed and replaced as per Carlos. No further odor complaints were received. Vought called DEP and issued report (#1407818) for impact to sump. DEC requires: 1) Tank tightness test of new or repaired system 2) written statement regarding condition of concrete and cleanup procedures. As per Carlos, DEC letter should be sent to:

505 WEA Owners Corp. Gerard J. Picasso 1133 Broadway New York, NY Ph: 212-807-6969 attn: Lisa or Gerard.

07/31/06-Zhune sent TTF letter to Mr. Picasso.

08/28/06 Owner sent invoices of clean up and rental of temporary tank.

8/29/06-Zhune called Carlos (Super) Ph 917-838-9952. He said they are still in the process of removing old tank.

09/27/07 Petroleum tank submitted the following information: ON 20 July 2006 Petroleum Tank was notified of an oil spill at 505 east End Avenue in Manhattan. They found that the existing above ground 5,000 gallon #6 fuel storage tank had begun to leak. The room was littered with debris. The tank was immediately emptied and the room cleaned. The contaminated debris was placed into drums along with absorbent that was used to take up the oil. The tank was removed and the floor was washed with a pressure washer. The floor was a solid cement floor free of any cracks or voids. For this reason no soil samples were taken. A New tank has been installed by Eastmond & Sons.

10/13/2007 Eastmont sent the following Report: At our time of our (Eastmond & Sons)involvement in the new tank installation at the above referenced location the fuel oil tank room has been already cleaned. There were no sign of an oil spill that would require collecting soil samples. Neither cracks nor holes would have compromised the ground beneath the concrete were present Due to an influx of water in the lower exterior foundation wall, it it was my desicion to install a new concrete pad with a gutter built into the one side of the concrete to allow the incoming water to be channeled directly to an existing sump outside the tank area. In order to maintain a containment area for the new tank, additional concrete block were installed on top of the new concrete pad as a dike wall within the tank area to eliminte the possibility of oil ever entering the channel. Case Closed

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SAWYER 10/7/03 TIPPLE UPDATED// SAWYER RESPONDED TO SCENE.////////

10/7/03 0645 Hrs – Sawyer – I responded to the site to find a packaged boiler connected to a 1500 gallon tank. The spill was contained and outlined a pattern outside the vent pipe of the boiler spilling, down onto the boiler, onto the tank and down the street to 55 West 69Th Street. There were two 55 gallon drums and one 35 gallon drum sitting on the side walk with over filled #2 fuel. When I arrived another project manager from Maximum Mechanical Corp. was there. He said this was not his project, but since he was in the area his company wanted him to stop by.

He informed me that the real PM a George Leoutsakos would be arriving momentarily. The super of the building Ruben called the PM a couple of times before he arrived at 9:30 am. George said he had contracted USA Tank Cleaners to clean up the contained spill and clean out or take the drums. In addition to the Fire Department who wrote the super a citation, the NYPD and ConED emergency health and safety were also there at various times.

10/16/03 1400 Hrs – Sawyer – Ruben the super called and informed me that USA Tank Cleaners returned and cleaned the gutters to a higher level than normal. Closed.

Caller Remarks:

LEAK IN FEEDER LINE THAT RUNS BETWEEN THE TWO SUBSTATIONS – LEAK IS APPROX 1.5 GALS PER HOUR – APPROX 200 GALS MISSING FROM RESEVOIR CON ED 122598 – LINE IS 80 MILES LONG AND LEAK COULD BE SOMEWHERE BETWWEN THE 2 – UNK PCB COUNT

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL

1/21/99: ERT Piczatowski – Based on flow meter trending, not on reservoir level drop. Pulling manholes and 2 PFT truck are out. Capacity of feeder is 308,153 gallons. (JHO)

1/23/99: Leak located at West End Avenue at West 86th St., Manhattan.

1/25/99: spoke to John Heggerty, S&TO Central Ops. Final leak volume calculation is 282 gallons. (CAE)

1/25/99: CIG Romero reports temp clamp as of 0200 on 1/23/99. West End Ave. 10 feet north of W. 86th Street. (CAE)

Field notes: 1/25/99 On location at 12:53. Met with Gerry Materazzo, Joe Floryshak (Con Ed) and George Vasilev (MEG). Repairs made. Materazzo reports that bedrock was only a couple of inches below feeder. Had to jack hammer out to put barrel on. Vasilev put in well this morning to bedrock – recovered 90 gallons mostly oil. During excavation removed 5 yards contaminated soil. Oil is entering sewer on corner of W. End Ave. & W. 86th St. MEG maintaining boom. MEG to return on Friday to check well and sewer (change sorbent).

Chem Lab arrived and collected 2 soil samples from west wall of excavation a couple of feet north of the spot on the feeder where the leak was (leak at 4 o'clock on feeder facing south). Samples looked dark and wet – collected from behind the shoring.

After samples collected I told Materazzo he could backfill. (CAE)

10/18/02: submitted for closure by Con Ed (see e2mis report which follows). Sent back to Con Ed requesting soil sample results and additional information on well. This spill added to Appendix B site no. 41, and transferred from Engelhardt to O'Connell. (JHO)

3/10/03: letter from Con Edison EH&S Remediation group requesting to combine this spill with Appendix B site 29 (sp. 9012291).

(JHO)

3/25/04: Draft site investigation work plan submitted by Con Edison. (JHO)

10/7/04: Comment letter on SIWP sent out. (JHO)

5/17/05: revised SIWP (incorporating DEC comments) approved. (SKA)

3/30/06: Con Ed submits site investigation report. Report assigned to Shaun Bollers for review. (JHO)

8/7/06: Report indicates that no residual soil or groundwater contamination was detected during the site investigation activities. Based on these results, spill is closed. (JHO)

----- e2mis no. 122-598:

21-JAN-1999 @ 13:40 HRS. FLOW METER TRENDING ON FDR M52 AT WEST 49TH ST S/S PUMPHOUSES INDICATES A DISCREPANCY OF APPROXIMATELY 200 GALLONS. LEAK RATE OF 1.5 GALLONS PER HOUR. LEAK COMMITTEE CONVENED. UT AND GAS CORROSION INSPECTING MANHOLES ON RUN OF FEEDER. PFT VAN DISPATCHED TO PATROL RUN OF FEEDER. SUBSTATION OPERATIONS INSPECTING PUMPHOUSES, PURS AND POTHEADS. FEEDER RUN FROM WEST 49TH ST S/S TO SPRAINBROOK SUBSTATION.

DEC# 98-12964 Conference call 13:30. TO crews to check Manhattan and Westchester manholes. CGO crews to check Bronx manholes. CSD to check Pumphouses and Purs and valves at Sprainbrook Sta. PFT van #1 to go South from 125th St and B'Way. PFT van #2 to go North from 125th St and B'Way. MEG notified to standby and arrived on location at 125th St and B'Way at 16:00. VNR notified and crews standing by in yard in Harlem. ATC notified for possible air monitoring if necessary. As per CIG S&D was not called out to check the Harlem River at Tremont Ave since the fluid loss (1.5 GPH) would not be able to be seen on the surface.

20:15 all manholes in Westchester have been checked - no leak found. At 20:20 Chem Lab found indications of PFT at 84th St and West End Ave. Barhole crew to barhole area.

20:30 conference call: Large signal found in subsurface @ 85th St.; Manhattan Area completely checked for PFT; PFT van to check Bronx run; All Bronx manholes checked - except MH27009- no leak found; At 21:30 Manhattan manholes have been checked - no leak. At 21:40 all Pumphouses and Purs checked - no leak. Barholes finished on 11-7 shift 1/22/99. PFT samples taken. Highest PFT indications found at intersection of West End Ave & 86th St. Excavation crew on location and excavation started at 09:30 at intersection of 86th St and West End Ave. MH27009 checked - no leak. Area excavated - no leak found. 19:00 conference call: Higher concentration found north of 1st excavation. 2nd excavation started approx 30' north of 1st. Dielectric fluid found in trench. Excavation continues south - Leak found and clamped by 02:00 1/23/99. Chem lab took samples and reported 99-00700 <1.0ppm PCB's; 99-00755 .466 ppm total benzene in soil and 99-00701 23.5 and 23.4 total benzene in oil. No TCLP results were given. Temp EPA ID# NYP004035317 received from ERT for CTW disposal. Excavation continues for permanent repairs. Welding started at 15:00 1/23/99. 220 style repair barrel welded over temp clamp @ 04:15 1/24/99. ETI made inspection of weld. CSD notified. MEG removed 43 cubic yards of soil and 100 gallons of fluid from trench at leak site at 23:00 1/23/99. MEG installed recovery well at leak location. During well installation MEG removed an additional 90 gallons of dielectric fluid from trench. DEC notified of leak and well installation. Chris Engelhardt (NYSDEC) requested soil samples to be taken by Chem Lab.

MEG could not take samples from soil at bottom of trench since bottom of trench is rock. On 4/1/99 and 4/9/99 MEG removed booms

from sewers – approx 1 cubic yard of material each time. CSD reports 288 gallons lost due to leak. Report from MEG geologist received on 4/7/99. On 8/3/99, 8/12/99, 8/20/99, 8/27/99, 9/1/99, 9/10/99, 9/16/99, 9/24/99, 9/30/99, 10/20/99 MEG replaced sorbents in sewers at 86th St and West End Ave and disposed of 1 cubic yard of material.

Sample ID No. 99-00700 For what parameters? X PCB X BENZENE Recovered oil 190 GALLONS Excavated contaminated soil, bluestone. Excavated soil/bluestone 43 CUBIC YARDS Wells installed. Cleanup completed on 01/23/99 at 23:00

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

Spill number closed out following operation of a vapor recovery system at the site from April 1995 through March 1996. Air sample

were taken approximately monthly, and indicated progressive removal of all petroleum vapors from the subsurface. Final monitoring with HNu meter on March 13 showed no vapors.

## NO MATERIAL INFORMATION GIVEN FOR THIS SPILL

## Caller Remarks:

noticed fill line was leaking, oil leaked out: fill line being replaced and oil cleaned up.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SAWYER 12/10/2003 Sangesland spoke with Big Anthony at Petroleum Tank Cleaners about the site.

Property manager: Barry Zonon of Tri Management 212-675-0593

On 12/5/03 the building owner/manager called PTC to say he had a leak around his fill line. PTC inspected the line and gave the owner 2 proposals. One proposal was to remove and replace the fill line (from front of building, down an old coal chute into the basement). This proposal was approved by the owner and was being done on 12/10/2003.

The second proposal was to clean up the contamination in both the basement and in front of the building. As of 12/10/03 this proposal had NOT been approved by the owner.

2/20/04 – Sawyer – Talked to PTC and they confirmed that they removed one fill pipe and cemented the area and installed a new one. Closed.

Caller Remarks:

170 gallons of #2 was lost to vaults v9328, v9500, v9112 and manhole sb1244 due to loss from delivery truck, clean up pending

DEC Investigator Remarks:

6/2/11 – Raphael Ketani. I spoke to David Duke at the Con Ed environmental desk (212) 580-8383. He sent me the EMIS report (#225923). A total of 71 gals. of fuel oil had spilled into the 3 vaults and the manhole. These are vaults V9112, V9328, V9500 and SB12447. PCB and flash point samples were taken. One sample had 13 ppm of PCB. Clean Ventures came and sucked out the oil and cleaned the vaults and manhole. The work was completed on 5/31/11.

7/22/11 – Austin – See spill # 1102131, for the fuel truck spill. Thee adjoining Con Ed service vaults were impacted – Con Ed contained and cleaned up the spill – See the documents in eDocs files for more info – Spill closed – end

Caller Remarks:

spill coming from unknown source – FD on scene now – no other information avail

DEC Investigator Remarks:

FD on scene.Approx 70 gallon #4 oil on the street,spilled from delivery truck.FD in the process of checking the tank room.FD could not provide truck company's name.Raphael Ketani responding to the site.

5/26/11 – Raphael Ketani. I arrived on the scene and saw about 20 pieces of NYFD equipment along Broadway, in front of the affected building (1995 Broadway), along West 68th Street, and along Amsterdam Avenue – the other street bounding West 68th Street. I met Deputy Chief Carlsen of the NYFD Division 3, Mr. Elliott – DOS inspector, Eric Sutphen – HESS (732) 750-6000, and Gavin\_Ajahi Navarro – DEP Hazmat. Later, a Con Ed representative was on site.

I saw a line of free product along the curb on the south side of West 68th Street. Free product had pooled in front of the driveway to the garage for 1995 Broadway and in front of the driveway to the neighboring condominium building to the west. There was a little staining of a manhole cover which was in front of the driveway to the neighboring building. This made a line of about 120 feet of free product. The sidewalk and 3 Con Ed vaults next to 1995 Broadway were also affected (associated spill #1102137/EMIS #225923). The entire width of the sidewalk (15') was covered in oil next to the middle Con Ed vault. There was oil on the side of the building. This affected only some metal sheeting. I looked inside the middle vault (the only one I could easily see into) and didn't see free product inside, except for in a square, depression in the bottom of the vault. The fill port was in the sidewalk about 4 feet from the middle vault and was covered in oil. The passenger side of three parked cars were also covered in oil. The Crystal Transportation fuel delivery truck was still parked on site.

I spoke to Mr. Sutphen regarding how the spill happened and how bad it was. He said that about 150 gals. of #4 oil sprayed onto the street and the sidewalk and 60 gals. spilled under the tank in 1995 Broadway. He said that the building received a delivery yesterday up to a total volume of 8,000 gal. for the 20,000 gal. The super ordered another delivery today and the delivery truck driver pumped more oil into the tank. However, in the process of making the delivery, the oil started spraying out of the fill port in the sidewalk. It turned out that the gauge on the tank wasn't reading the volumes correctly. I asked Mr. Sutphen why the super. didn't know how much he needed. Mr. Sutphen said that the only way to tell how much oil should be delivered was for the super to keep delivery records. Mr. Sutphen didn't know whether the super kept such records. I told Mr. Sutphen about the stained Con Ed manhole cover and that some oil may have gotten down there. I also asked him about the sprayed cars. He said that the super told him that the owners will take their cars to the car wash and the building will reimburse them for the expense.

After viewing the spill on the street, I met the super and he showed me the tank room. The AST was on saddles. I could see a large stain with absorbent sand at the right end and a pool of free product under the left end of the tank. The super showed me the place on top of the tank where the oil had escaped and run down the sides. It seemed as if about 40 or 50 gallons of oil had spilled out. The vapors were noticeable in the tank room and less noticeable in the boiler room adjacent to the tank room. The odors were very slight outside of these two rooms and were not apparent in the basement hallway.

At about 1:30PM, the guzzler from Riteway Tank arrived. The delivery truck driver drove his truck away and the crew from Riteway started sucking up the oil on the street. The NYFD brought in their small fire truck for spraying the Con Ed vaults, if they should catch fire. I spoke to the crew from Riteway and they said that they will clean up the tank room after they clean up the street. The NYFD started removing their trucks. Everything looked to be under control. So I left the scene.

6/2/11 – Raphael Ketani. I tried to contact Mr. Sutphen (732) 750-6000 to see whether the spill had been cleaned up, but I could only leave a message. I contacted the Con Ed environmental desk (212) 580-8383, but they couldn't talk to me at the time regarding cleaning up the manhole (spill #1102137/EMIS #225923).

A little while later, I spoke to David Duke at the Con Ed environmental desk. He sent me the EMIS report. A total of 71 gals. of fuel oil had spilled into the 3 vaults and the manhole. These are vaults V9112, V9328, V9500 and SB12447. PCB and flash point samples were taken. One sample had 13 ppm of PCB. Clean Ventures came and sucked out the oil and cleaned the vaults and manhole. The work was completed on 5/31/11.

6/3/11 – Raphael Ketani. I made an unannounced site visit. I inspected the street and the sidewalk. All of the oil had been cleaned up. There were no oil odors and only very faint staining on the asphalt. The side of the building had also been cleaned. Next, I met Warren Ward, Jr., the building engineer (212) 362-1137/1139 – warrenw@cammebys.com. He showed me the tank room. The tank room was next to the boiler room. There were no oil odors. I sensed light oil odors only when Mr. Ward opened up the doors to the tank room. I asked him whether anyone had complained of odors. He said No. I could see many dark oil stains on the floor under the right end of the tank. Mr. Ward said that Riteway was coming back to repeat the power washing at this end. I saw two long, wide, wet oil marks on the side of the tank. I asked Mr. Ward whether any fittings or the man way gasket was leaking. He said that the stains were due to the original overfill and that nothing was loose. Next, I saw a line of drip marks under the left end of the tank. Again, I asked Mr. Ward whether there was a problem such as a seam that was about to open up. Mr. Ward said that this was also due to the overfill.

I returned to the office and contacted Eric Sutphen (732) 750-6637. I told Mr. Sutphen about the staining on the floor under each end of the tank and about the wide stains on the side of the tank. I added that someone needed to look at the top and under side

of the tank to see whether there are any loose fittings or whether a seam is about to break. Mr. Sutphen said that he will call Riteway and have them check out the situation and do more cleaning.

A little while later, Mr. Sutphen called and told me that Riteway is going to return to the tank today and check out the stains and the tank itself.

6/6/11 – Raphael Ketani. Mr. Sutphen (732) 750–6637 called me back. He said that Riteway was at the site friday (6/3/11). They cleaned up the top of the tank and the sides. Absorbent pads were put down to absorb any further dripping. The bottom of the tank was checked and there are no leaking seams. Mr. Sutphen added that the dripping is coming from the pillar (an enclosure around the vent pipe that is built into the surface covering for the building and contains the vent pipe). A few gallons of oil became trapped there and this is what is dripping out. The pads should be sufficient to contain the dripping.

As the spill was completely cleaned up on the street, in the Con Ed vaults and manhole, and is now very minor dripping of a small quantity of oil that is contained by the absorbent pads, and as there are no vapors outside of the tank room, I have determined that there are no impacts nor threats to the environment or to people. Therefore, I am closing the spill case.

**THE FOLLOWING CLOSED SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM OR STORMS. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.**

**Hazardous waste codes presented in individual Toxic Information Profiles are defined below.**

- B001 PCB Oil (concentrated) from transformers, capacitors, etc.
- B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
- B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.
- B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.
- B008
- D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.
- D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.
- D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.
- D004 Arsenic
- D006 Cadmium
- D007 Chromium
- D008 Lead
- D009 Mercury
- D011 Silver
- D018 BENZENE
- D022 Chloroform
- F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
- F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the

recovery of these spent solvents and spent solvent mixtures. (T)

- F003 The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)\*
- F004 The following spent non-halogenated solvents: Cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
- F005 The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)
- F027 Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing Hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component.) (H)
- P012 Arsenic oxide  $As_2O_3$
- P030 Cyanides (soluble cyanide salts), not otherwise specified
- P087 Osmium oxide  $OsO_4$ , (T-4)-
- P106 Sodium cyanide  $Na(CN)$
- P108 Strychnine, & salts
- U002 Acetone (I)
- U007 Acrylamide
- U012 Aniline (I,T)
- U019 Benzene (I,T)
- U021 Benzidine
- U044 Chloroform

U069 1,2-Benzenedicarboxylic acid, dibutyl ester  
U072 Benzene, 1,4-dichloro-  
U077 Ethane, 1,2-dichloro-  
U080 Methylene chloride  
U108 1,4-Diethyleneoxide

# How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12

Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street

Anytown, NY 11797

## MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

## ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

# Information Source Guide

*Toxics Targeting's Environmental Reports* contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup**: Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites. ASTM required.\* Fannie Mae required.\*\* Source: U. S. Environmental Protection Agency.<sup>1</sup>  
Data attributes updated from: 9/9/2015. Data obtained by Toxics Targeting: 9/9/2015.  
New Facilities updated through: 9/9/2015. Data obtained by Toxics Targeting: 9/9/2015.

2) **Inactive Hazardous Waste Disposal Site Registry**: New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry. ASTM required.\* Fannie Mae required.\*\* Source: New York State Department of Environmental Conservation.<sup>2</sup>  
Data attributes updated through: 7/01/2016. Data obtained by Toxics Targeting: 7/01/2016.  
New Facilities updated to: 7/01/2016. Data obtained by Toxics Targeting: 7/01/2016.

3) **Federal & State Corrective Action Activity (CORRACTS)**: New York State and Federal databases of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA). ASTM required.\* Fannie Mae required.\*\*

New facilities updated through: 4/11/2016. Data obtained by Toxics Targeting: 4/19/2016.  
Data attributes updated through: 4/11/2016. Data obtained by Toxics Targeting: 4/19/2016.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). This database includes both *active* and *closed* spills. ASTM required.\* Fannie Mae.\*\* Source: NYS Department of Environmental Conservation.<sup>2</sup>

New spills through: 2/13/2016 New spills data obtained by Toxics Targeting: 2/13/2016  
Spill attribute data through: 6/24/2016 Spill attribute data obtained by Toxics Targeting: 6/24/2016

Active spills: paperwork not completed. Closed spills: paperwork completed.  
Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. **Tank & other data withheld by NYSDEC as of 4/1/2002.** ASTM required.\* Fannie Mae required.\*\* Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

10) **Petroleum Bulk Storage Facilities:** a compilation of local and state databases of aboveground and underground petroleum storage tank facilities.

(a) **NYS Petroleum Bulk Storage Database:** This includes all New York State counties except Cortland, Nassau, Rockland, Suffolk, and Westchester. ASTM required.\* Fannie Mae required.\*\* Source: NYS Department of Environmental Conservation.<sup>2</sup>  
New facilities updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.  
Tank data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

(b) **New York City Fire Department Tank Data:** **Data has been withheld by the NYC Fire Dept.**  
Source: New York City Fire Department. Data obtained by Toxics Targeting: 2/18/1997

11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Division of Environmental Remediation pursuant to New York State Law. ASTM required.\* Fannie Mae required.\*\* Source: New York State Department of Environmental Conservation.<sup>2</sup>

New facilities updated through: 4/22/2016. New facilities obtained by Toxics Targeting: 4/22/2016.  
Manifest transactions data updated to: 4/22/2016. Manifest transactions data obtained by Toxics Targeting: 4/22/2016.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA). ASTM required.\* Fannie Mae required.\*\* Source: U. S. Environmental Protection Agency<sup>1</sup>  
New facilities updated through: 4/11/2016. Data obtained by Toxics Targeting: 4/19/2016.  
Data attributes updated through: 4/11/2016. Data obtained by Toxics Targeting: 4/19/2016.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. **Tank & other data withheld by NYSDEC as of 4/1/2002.** ASTM required.\* Fannie Mae required.\*\* Source: New York State Department of Environmental Conservation.<sup>2</sup>  
Data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

13) **Historic New York City Utility Facilities (1898 to 1950)**: An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Hazardous Substance Waste Disposal Site Study**: NYS database of waste disposal sites that may pose threats to public health or the environment, but could not be remediated using monies from the Hazardous Waste Remedial Fund.

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated to: 5/16/2000.

Data obtained by Toxics Targeting: 5/16/2000.

15) **Toxic Release Inventory (TRI)**: Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency.<sup>1</sup> / NYS Department of Environmental Conservation<sup>2</sup>

Data updated through: 3/8/2004.

Data obtained by Toxics Targeting: 3/25/2004

16) **Toxic Wastewater Discharges (Permit Compliance System)**: Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement\*\* below. Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data updated through: 6/17/2004.

Data obtained by Toxics Targeting: 7/19/2004.

17) **Air Discharge Facilities**: EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.

See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency<sup>1</sup>

Data updated through: 11/24/1999.

Data obtained by Toxics Targeting: 1/6/2000

18) **Civil Enforcement & Administrative Docket**: This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency.<sup>1</sup>

New Sites through: 10/14/1999.

Data updated through: 10/14/1999.

Data obtained by Toxics Targeting: 11/18/1999.

19) **New York City Environmental Quality Review (CEQR) – E Designation Sites**: These sites are parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed.

Re: FOIL Request  
Project No.: 12166  
200 Central Park West, New York, NY 10024 (American Museum of Natural History)

Dear Sir or Madam:

Pursuant to the Freedom of Information Law, we are requesting information regarding underground/aboveground storage tanks (USTs/ASTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage/treatment/disposal of hazardous materials or hazardous materials activities for the above referenced site. Your response can either be faxed to (212) 726-0942 or mailed to the address identified above as soon as possible. Please notify me if there are any costs associated with processing this request. In addition, please indicate AKRF's project number (**12166**) on all correspondence. If you have any questions, please call me at (646) 388-9576.

Thank you in advance for your assistance and cooperation.

Sincerely,  
AKRF, Inc.

## Dear Sir or Madam

We hereby acknowledge receipt of your Freedom of Information Law ("FOIL") request submitted online. Your request is important to us and will be handled as expeditiously as possible. Please be advised however, that because of the large volume of pending complex FOIL requests handled by the Department of Environmental Protection, and the available staffing, your response is anticipated to take between 120-150 days from the date of this acknowledgement.

Sincerely,  
Deborah S. Fremder

Project # 12166

Dear Ms. Bosco:

This will acknowledge receipt of your request for records under the Freedom of Information Law, received by this office on August 5, 2016.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Danielle L. Rysedorph, Esq.

Your File #: 12166  
Re: 200 Central Park West  
New York, NY 10024

Dear Ms. Bosco:

This letter responds to your Freedom of Information Law request of August 5, 2016, in which you requested "information regarding underground/aboveground storage tanks (USTs/ASTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage/treatment/disposal of hazardous materials or hazardous materials activities for the above referenced site." Please be advised that after conducting a diligent search, no records responsive to your request have been located.

The address is served by the New York City public water system, NY7003493. Any violation reports for the public water system can be found here:

[http://www.health.ny.gov/environmental/water/drinking/violations/previous\\_compliance\\_reports.htm](http://www.health.ny.gov/environmental/water/drinking/violations/previous_compliance_reports.htm)

Should you feel that you have been unlawfully denied access to records, you may appeal such denial in writing within 30 days to the Records Access Appeals Officer, Division of Legal Affairs, Empire State Plaza, 2438 Corning Tower, Albany, New York, 12237-0026.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Danielle L. Rysedorph, Esq.

Re: FOIL Request  
Project No.: 12166  
200 Central Park West, New York, NY 10024 (American Museum of Natural History)

Dear Sir or Madam:

Pursuant to the Freedom of Information Law, we are requesting information regarding underground/aboveground storage tanks (USTs/ASTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage/treatment/disposal of hazardous materials or hazardous materials activities for the above referenced site. Your response can either be faxed to (212) 726-0942 or mailed to the address identified above as soon as possible. Please notify me if there are any costs associated with processing this request. In addition, please indicate AKRF's project number (**12166**) on all correspondence. If you have any questions, please call me at (646) 388-9576.

Thank you in advance for your assistance and cooperation.

Sincerely,  
AKRF, Inc.

## Environmental Site Assessment – Site Questionnaire

Please answer all questions to the best of your actual knowledge. Please call with any questions or comments.

**AKRF Contact:** Eric Park  
**Office phone:** 800-899-2573  
**Cell phone:** 800-899-2573

**Person completing questionnaire:** American Museum of Natural History (AMNH) Personnel

**Relationship to the site:** Coordinated responses from Senior Director of Capital Projects & Construction and Senior Director of Human Resources

**Length of time associated with the site:** Sr. Dir. Capital Projects & Construction - About 5 years

- 1) When were the current buildings constructed? Do you have surveyed drawings? Blueprints? Geotechnical subsurface studies?

Section 11 – 1927  
Section 11B – 1992  
Section 15A – 1965  
Section 15 – 1903  
Section 17 – 1931  
Section 7A 1905  
Section 7 – 1900

No to all.

- 2) Have there been any renovation or additions since initial construction?

Requires Clarification.

- 3) Is there any historic fill on-site? (Construction and demolition debris? Ash? Dredge spoils?)

Not certain – not aware of any historic fill under any of the buildings.

- 4) Have there been any asbestos or lead assessment or abatement activities at the property? If there is asbestos on-site do you have an operations and maintenance plan?

Yes, we have an asbestos management plan.

- 5) Please describe land use at the property prior to construction of the current buildings.

City property.

- 6) Please describe activities at the site since construction of the current buildings, including previous tenants. Commercial activities such as dry cleaning and auto repair are of particular interest to this study.

AMNH is the first tenant. There is no dry cleaning and auto repair.

- 7) Do you know of specific chemicals that are present or once were present at the property? Yes, we have a full list.

- 8) Do you know of any environmental cleanups that have taken place at the property?

No.

- 9) Do municipal water and sewers service the site, or does it rely on private wells and/or a septic system?

AMNH is on the municipal water and service.

- 10) Are you aware of any wells, public or private, on or near the subject property? Not aware of any in this area.

- 11) Please indicate the nature and frequency of trash removal from the subject property.

Trash is removed from all areas daily. All trash is placed in a 30-yard compactor located in the yard and hauled by a private contractor as needed.

- 12) Are you aware of the current or former use, storage or production of any hazardous materials (petroleum products, solvents, paints, pesticides, etc) in any part of the subject site?

Yes, we have a full list.

- 13) Are any environmental permits or licenses held currently, or in the past, relating to the property?

Yes:

NYSDEC Pesticide Applicator Business Registration Certificate,  
NYSDEC Petroleum Bulk Storage Certificate, and  
NYSDEC Air Facility Registration Certificate.

- 14) Are there any registrations held for underground or above ground storage tanks at the property (NYSDEC, NYCDOB, FDNY)?

Yes we have registration for NYSDEC and FDNY.

- 15) Have any previous environmental reports, audits or investigations been performed at the site? If available, please provide copies, preferably prior to the site visit.

Yes: NYS onsite inspection for aboveground and underground diesel storage.

- 16) Does the site or any part of the site operate under a community right-to-know plan, safety plan, preparedness and prevention plan, spill prevention, countermeasure or control plan?

Yes to all.

- 17) Does the property have any activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

NYC Landmarks and Parks

- 18) Are you aware of any reports regarding hydrogeologic or geotechnical conditions on the property or surrounding area?

No

- 19) Please provide copies of any notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating environmental liens encumbering the property.

Attached are correspondence:

NYSDEC – Re: Petroleum Bulk Storage; 05/02/2013, 05/24/2013, & 05/28/2013

EPA – Re: Information request during September 2010 audit

- 20) Please provide copies of any hazardous waste generator notices or reports.

Safety Director has on file.

Requires Clarification.

- 21) Please advise of:

- a. any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property,

No

- b. any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and

None

- c. any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Yes – NYSDEC notice, same as #19.

- 22) Have any environmental liens been filed or recorded against the property under federal, tribal, state or local law?

No

- 23) Are you aware of value reduction on the property due to environmental issues?

N/A

24) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

N/A

25) Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No

26) Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

No

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

## APPENDICES

- Appendix A – Health and Safety Plan

## 1.0 INTRODUCTION

This Sampling Protocol provides a scope of work for conducting a Subsurface (Phase II) Investigation at the Site comprising portions of the American Museum of Natural History (AMNH or the Museum) including Sections 1, 7A, 8, 11, 11A, 11B, 15, 15A, 16, and 17, Weston Pavilion, adjacent Museum yards, and an approximately 76,000-square foot (SF) portion of Theodore Roosevelt Park, defined legally as Tax Block 1130, part of Lot 1 (the Site). The Site, along with the remainder of the Museum buildings and grounds, is located at 200 Central Park West, on New York City-owned mapped parkland under the jurisdiction of the New York City Department of Parks and Recreation (NYC Parks), as shown on Figure 1. The Site boundary and the proposed sampling locations are shown on Figure 2.

This scope of work is intended to assess the potential for encountering hazardous materials during excavation that would be associated with the proposed construction of the Richard Gilder Center for Science, Education and Innovation, and associated improvements to adjacent museum buildings and Theodore Roosevelt Park. The scope is based on the findings of AKRF's November 2016 *Phase I Environmental Site Assessments* (ESA), described in Section 1.4 of this Sampling Protocol, conducted for the Site. The scope of this Sampling Protocol includes the collection of soil, soil vapor and, if encountered, groundwater samples for laboratory analysis. A Health and Safety Plan (HASP) is included as Appendix A to provide measures for protecting on-site personnel and the public during the implementation of the Sampling Protocol.

### 1.1 Site Characterization

Based on U.S. Geological Survey mapping, the Site lies at an elevation of approximately 85 to 90 feet above the North American Vertical Datum (NAVD) of 1988 (an approximation of mean sea level), with the ground sloping slightly down to the south-southwest. Based on USGS mapping, depth to bedrock in the vicinity of the Site is anticipated to be highly variable (approximately 5 to 35 feet below grade).

Based on previous studies (see Section 1.4), groundwater is anticipated to be first encountered approximately 20 to 30 feet below grade; however, shallower groundwater perched on bedrock may be present. Groundwater is anticipated to flow in a southwesterly direction toward the Hudson River, approximately 3,200 feet west of the Site. However, actual groundwater depth and flow beneath the Site can be affected by many factors including the A/B/C/D Line subway tunnels approximately 450 feet east of the Site (east-adjacent to the Site superblock beneath Central Park West), other subsurface features or obstructions such as basements or utilities, and other factors. Groundwater in Manhattan is not used as a source of potable water.

### 1.2 Proposed Project

The proposed project entails demolition of existing Museum buildings within the footprint of the proposed Richard Gilder Center for Science, Education and Innovation (Gilder Center), followed by: construction of a new building with one basement level; renovation in portions of adjacent Museum buildings within the Site; and improvements to the portion of Theodore Roosevelt Park within the Site. The proposed footprint of the Gilder Center is shown on Figure 2.

The proposed project is anticipated to require excavation to approximately 20 feet below grade for the construction of the Gilder Center, and shallower excavation (assumed to be less than 4 feet below grade) for Theodore Roosevelt Park improvements. Based on the expected depth to groundwater, limited dewatering, at most, is anticipated to be required for the proposed construction.

### 1.3 Site History

The Site has been used and exclusively occupied by the Museum since its statutory grant by New York State and ensuing lease agreement with New York City in 1877. The Museum buildings were constructed in stages on previously vacant land known as Manhattan Square, with the first building (Section 1) built in approximately 1877. Various additions were constructed between 1912 and 2000, with Sections 16, 18, and 20 added most recently. Throughout their history, the Site buildings were primarily used for exhibitions, research, maintenance, and educational purposes associated with the Museum. Sections 15 and 15A were identified as a storage structure and auto house on Sanborn maps dated 1951 through 1989. Though Sanborn maps indicated that Sections 15 and 15A were then used as a Power House and Boiler House through 1989, prior reports indicated that these buildings were converted into a garage in approximately 1933, and into Ichthyology Department space (the current use) in approximately 1965. Section 17 housed a coal-fired electric power plant until the 1960s, when the Museum was connected to Consolidated Edison electricity and steam heat.

### 1.4 Previous Environmental Investigations

*American Museum of Natural History – Portions of the American Museum of Natural History and Theodore Roosevelt Park, New York, New York - Phase I ESA, AKRF, November 2016*

The Phase I ESA reviewed a variety of sources including: current and historical land use maps; state and federal environmental regulatory databases; computerized New York City Fire Department and Buildings Department records; and previous studies, and included reconnaissance of the Site and its surroundings.

The Site buildings were constructed between 1902 and 2000 as parts of Museum expansions, and have been used as historically as exhibition, research, educational, and maintenance purposes associated with the Museum.

The Phase I ESA identified the following Recognized Environmental Conditions (RECs):

- Historical petroleum and chemical storage and use at the Site that might represent RECs included:

Section 16 – One 1,080-gallon diesel aboveground storage tank (AST) located within an epoxy-coated room with secondary containment berm;

Section 17 – One empty 250-gallon parts washer tank formerly containing trichloroethylene (TCE), and a 500-gallon double-walled diesel AST located on the first floor (a day tank associated with the AST located in Section 16); and

Exterior yard – Drums (up to 55 gallons) of ethanol, isopropanol, research space waste, and diesel in chemical storage sheds. Chemical storage sheds included secondary containment systems, and were regularly inspected to prevent spillage. Floor drains noted in the exterior yard and other areas throughout the Site were reportedly connected to the municipal sewer system and were in good condition with no evidence of releases or spills. Spill prevention kits were also identified in the drum storage area.

Regulatory databases identified the Museum as a small quantity generator (SQG) of hazardous waste from 2005 to 2016, and historical large quantity generator (LQG) of hazardous waste from 1984 to 2005. Chemical waste was disposed of by Clean Harbors, a permitted chemical waste hauler.

- The Museum was registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database with four ASTs and two underground storage tanks (USTs). Of these, three ASTs and one UST were located at the Site. These included: the two diesel ASTs discussed above; one closed-in-place 1,080-gallon double-wall steel UST with interstitial monitoring and high-level alarm in the exterior yard; and a former 50-gallon AST in Section 1 which was associated with the 1,080-gallon UST. The 50-gallon AST was registered with NYSDEC as being in-service, but was removed in September 2016. The on-site storage tanks were registered as having spill prevention measures including secondary containment in the form of curbs or double-wall construction, interstitial alarms, and high-level alarms, and no evidence of a release on or near the Site was noted.
- Other historical uses of the Site included use of Section 17 as a coal-fired electric power plant in (the Power House), and of Section 15 as an auto house. During the reconnaissance, no evidence of coal storage or residue was observed and there is, therefore, no present information indicating that the proposed project is expected to be complicated by the former presence of the power house and auto house.

The Phase I ESA also identified the following *de minimis* conditions:

- Arsenic-preserved hides were stored in dedicated areas on the fifth floor of Section 1, and on the third floor of Section 7A. Arsenic preservation was a common preservation technique for natural history collections between approximately 1930 and 1990. Preserved hides were stored in designated cabinets.
- Chemical storage in Section 8 was noted on the fifth floor in a NYC Fire Department (FDNY)-permitted room with a secondary containment berm. Chemicals stored included 1-butanol, ethyl alcohol, toluene, and other specimen preservation-related solvents in containers up to five gallons, with no record of historic release.
- Chemical storage in Section 11B was noted on the lower level and fourth floors and included nitrate film negatives and acetate film roll storage.
- Chemical storage noted in Section 15 in the Ichthyology collections included approximately 300,000 small jars (up to five gallons) of specimens preserved in ethanol or isopropanol, large containers and drums (up to 55 gallons) of ethanol used for specimen preservation, and other containers (generally 15 gallons or less) of organic solvents and solvent wastes.
- Chemical storage noted in Section 17 included small containers (up to one gallon) of polyester resins, spray paints, and acids in the exhibition production shop on the fifth floor.
- In addition to the chemical storage noted above, the exterior yard was used to store 55-gallon drums of waste cooking oil, and liquid nitrogen in a 3,000-gallon AST.
- A proposed 30,000-gallon UST was shown on 1962 engineering plans for Section 17 (the Power House). However, no documentation of the UST installation was found. Museum representatives did not believe the tank was installed, and the Museum was reported to have converted from coal to Consolidated Edison steam as a heating source around the time the plans were prepared; thus, it appears the proposed UST was never installed.
- An underground concrete structure located north-adjacent to Section 8, underneath a portion of Theodore Roosevelt Park, as shown on Figure 2, was reportedly used as a shooting range in the 1940s, and used for storage until the 2000s.

- The following petroleum storage tanks were located in Museum areas outside of the Site boundary: one in-service 6,000-gallon UST and one in-service 200-gallon AST, both containing diesel fuel for supplying an emergency generator. These tanks were located in a courtyard in the southwestern portion of the Museum (outside of the Site boundary). No odors, staining, or spills were noted in the vicinity of the AST, and no related historical spills were documented.
- Based on the age of the Museum sections and prior subsurface investigations which identified historic fill in the northern portion of Theodore Roosevelt Park, historic fill materials may also be present beneath the Site.

The petroleum and chemical storage areas on and near the Site are shown on Figure 2.

## 2.0 SCOPE OF WORK

Field work will be conducted under the site-specific Health and Safety Plan (Appendix A), in accordance with the Code of Federal Regulations, Title 29, Part 1910, Section 1910.120 (29 CFR 1910.120). The scope consists of a geophysical survey and the collection and laboratory analysis of soil, soil gas, and groundwater samples, if groundwater is encountered. Ten borings will be advanced for the collection and laboratory analysis of soil samples. If groundwater is encountered, up to five groundwater samples will be collected from temporary well points in the borings. In addition, seven borings will be advanced for collection of soil gas samples.

The proposed boring locations are shown on Figure 2. Soil borings SB-1 through SB-8 and soil gas borings SV-1 through SV-8 are proposed to be advanced within or near the footprint of the proposed Gilder Center, with their locations selected to characterize potential impacts from the RECs identified above. Soil borings SB-9 and SB-10 will be advanced in surrounding park areas which may be affected by improvements associated with the proposed project. The rationale for the proposed boring locations is detailed in Table 1:

**Table 1  
Proposed Investigation Locations**

| Boring Number   | Location                                                                                                            | Rationale                                                                                                                                                                                            |
|-----------------|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| SB/GW-7<br>SV-7      | Within Gilder Center footprint, adjacent to former shooting range, and presumed downgradient of Section 15 and the exterior chemical storage area. | Assess soil, soil vapor, and groundwater (if encountered) in vicinity of the former shooting range, historical uses of Section 15, including former auto house, and past and present chemical storage in Section 15 and the exterior chemical storage area. |
| SB-8                 | Within Gilder Center footprint, adjacent to closed-in-place UST, presumed downgradient of former 50-gallon AST.                                    | Assess soil in vicinity of the closed-in-place UST, and former 50-gallon AST.                                                                                                                                                                               |
| SB-9                 | In Theodore Roosevelt Park, north of Section 17.                                                                                                   | Characterize soil conditions in the northern portion of the Site.                                                                                                                                                                                           |
| SB-10                | In Theodore Roosevelt Park, presumed downgradient of off-site Museum petroleum storage tanks, south of Section 8.                                  | Characterize soil conditions in the southern portion of the Site, and assess soil associated with other Museum petroleum storage tanks (outside of Site boundary).                                                                                          |

## 2.1 Geophysical Survey

A geophysical survey will be conducted prior to drilling throughout accessible areas to clear the proposed sampling locations for subsurface utilities and to locate the known 1,080-gallon closed-in-place UST (registered with NYSDEC as a steel tank) and any additional USTs. The geophysical survey will comprise a ground-penetrating radar (GPR) survey and a magnetometer survey. GPR uses electromagnetic wave propagation and scattering to image and identify changes in electrical and magnetic properties in the ground. The magnetometer survey works on the premise that the subsurface has a relatively static magnetic field, and certain forces interrupt that field. Both systems are widely used for locating underground utility lines, steel USTs, etc.

## 2.2 Borings

A track-mounted Geoprobe<sup>®</sup> direct push rig will be used to advance the borings. Locations will be finalized based on field observations, e.g., access considerations, utilities, etc. Utility markouts will be requested from the New York City/Long Island One Call Center prior to the commencement of drilling. Some borings may be relocated or advanced using a Geoprobe<sup>®</sup> remote rig, manually operated slide hammer or hand auger if limited accessibility (i.e. narrow passageways and/or numerous nearby utilities) is encountered.

Borings SB-1 through SB-8 will be advanced to approximately 20 feet below grade (the anticipated maximum depth of excavation for the Gilder Center) or refusal, whichever is encountered first. Borings SB-9 and SB-10 will be advanced to approximately 4 feet below grade (the anticipated maximum depth of excavation for park improvements). If refusal occurs, an additional boring will be advanced in the vicinity of the initial boring to achieve the intended final boring depth.

## 2.3 Soil Sampling

Soil cores will be collected using a stainless steel, macro-core sampler with internal acetate liners. The cores will be field-screened using a photoionization detector (PID) to measure relative concentrations of volatile organic compounds (VOCs) in the soil. AKRF field personnel will

record and document subsurface conditions and soil samples will be chosen from each boring for laboratory analysis based on any field observations (e.g., odor and staining) and/or PID readings. If no evidence of contamination (visual, odor or PID readings) is apparent, the samples will be selected as follows:

- For deep borings SB-1 to SB-8, the samples will be selected:
  - From a 2-foot interval within a historic fill layer; and
  - From the 2-foot interval just above the water table or 2-foot interval at the bottom of the soil boring, whichever is encountered first.
- For shallow borings SB-9 and SB-10 advanced in the park, only one soil sample will be selected from the 2-foot interval within a historic fill layer.

Samples slated for analysis will be placed in laboratory-supplied containers and shipped in coolers in accordance with EPA protocols to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory. Soil samples will be analyzed for Target Compound List (TCL) VOCs by EPA Method 8260, TCL semi-volatile organic compounds (SVOCs) by EPA Method 8270, PCBs by EPA Method 8082, pesticides by EPA Method 8081, and Target Analyte List (TAL) metals.

Following completion, the borings will be backfilled with drill cuttings and patched at the surface using asphalt or cement mix. Any soil cuttings exhibiting evidence of gross contamination (e.g., sheen or product) will be drummed for off-site disposal as investigation-derived waste.

## 2.4 Groundwater Sampling

If groundwater is encountered in the borings, up to five groundwater samples will be collected from temporary well points installed in the borings. The proposed locations are shown on Figure 2. The samples will be collected using dedicated sampling equipment. Prior to sampling, each well will be purged until turbidity of the water has decreased, and approximately three well volumes have been removed.

Each sample will be labeled, sealed, and placed in a chilled cooler for shipment to a NYSDOH ELAP-certified laboratory. The groundwater samples will be analyzed for VOCs by EPA Method 8260, SVOCs by EPA Method 8270, PCBs by EPA Method 8082, pesticides by EPA Method 8081, and TAL metals (both total and filtered analysis).

## 2.5 Soil Gas Sampling

Seven soil gas samples will be collected at the approximate locations shown on Figure 2. The soil vapor probes will be installed by advancing an expendable drive point using a Geoprobe® to approximately 21 feet below grade (one foot below the anticipated depth of excavation), one foot above the water table, or refusal, whichever is encountered first. The drive point will then be retracted approximately 12 inches to create a void space.

A 6-inch stainless steel screen implant with connected Teflon tubing will be installed through the Geoprobe rods and threaded into the drive point. The sampling tubing will extend from the end of the screen to above grade. The push probe rods will then be removed and the boring will be backfilled with clean silica sand to 1 foot above the screen. Hydrated bentonite will be used to fill the remaining void around the sampling tubing to ground surface.

Prior to sample collection, purging of three sampler volumes will be conducted using a peristaltic pump. During purging, an inverted five-gallon bucket will be placed over the sampling point and

helium gas will be introduced through a small hole in the bucket to saturate the atmosphere around the sample port with helium gas. Purged vapors will be collected into a Tedlar bag and field-screened for organic vapors using a PID. The purged air will also be monitored using a portable helium detector to check for short-circuiting of ambient air into the vapor sampling point. If the purged soil gas contains greater than 10% helium, additional bentonite will be used to enhance the surface seal, and the point will be retested.

Following purging, the samples will be collected using 6-liter Summa canisters equipped with a vacuum gauge and flow controller calibrated for a one-hour sampling period. Vacuum readings will be collected at the start and end of the sampling period. At the completion of the survey, the sampling tubing will be cut off below the ground surface and the surface will be restored.

The Summa canisters will be labeled, sealed, and shipped to a NYSDOH ELAP-certified laboratory. The soil gas samples will be analyzed for VOCs by EPA Method TO-15.

Field observations and/or analytical results may reveal conditions indicative of a spill reportable to NYSDEC. Under New York State statute, AKRF would be obligated to report any such spill within two hours of discovery.

### **3.0 QUALITY ASSURANCE/QUALITY CONTROL PLAN**

#### **3.1 Laboratory Methods**

A New York State-certified laboratory will perform all analytical work. The laboratory will operate a Quality Assurance/Quality Control (QA/QC) program that will consist of proper laboratory practices (including the required chain-of-custody), an internal quality control program, and external quality control audits by New York State.

#### **3.2 Field Quality Control Sampling**

For QA/QC purposes, one trip blank per day of sampling will be sent with the collected samples for laboratory analysis. The trip blank(s) would be analyzed only for VOCs by EPA Method 8260 to check for contamination during transport and sampling procedures.

#### **3.3 Sample Custody**

To ensure the integrity of samples taken, a strict chain of custody record must be maintained on each sample. This begins after sampling with the entry in the sampler's field log book of the sampling details:

- a) Date and time of sampling;
- b) Sample location (as specific as possible);
- c) The unique sample number, size, and container(s) used;
- d) Sample description;
- e) Weather conditions (if applicable); and
- f) Any additional comments.

In addition, a record must be kept of the sample's progress from the sample site to the laboratory where it will be analyzed. This is the chain-of-custody form. The form must include:

- a) The sample number;

- b) The sampler's name;
- c) Date and time of sampling;
- d) Location at which the sample was taken, including the address, if possible;
- e) A description of the sample, as best known;
- f) Signatures of people involved in the chain of possession; and
- g) Inclusive dates of possession of each person in the chain.

The chain-of-custody form must accompany the sample throughout its trip to the laboratory. If the sample(s) must be shipped to a laboratory, most shipping agents will refuse to sign or separately carry the chain-of-custody form. In this one case, it is permissible to put the chain-of-custody form into the box with the sample and then seal the box. The recipient of the box, the laboratory's sample custodian, can then attest to the box's arrival still sealed and unopened.

Accompanying the chain-of-custody record, or included in it, must be a request to the laboratory for sample analyses. Information required includes:

- a) Name of person receiving the sample;
- b) Laboratory sample number;
- c) Date of sample receipt;
- d) Sample allocation; and
- e) Analyses to be performed.

Finally, on arrival at the laboratory, the sample custodian must enter the sample in the laboratory's sample log book. The chain-of-custody should be kept on file at the laboratory.

### **3.4 Field Decontamination Procedures**

To avoid contamination and cross-contamination of samples, all sampling equipment will be cleaned before collection of each sample. The following field procedures will be followed for all samples:

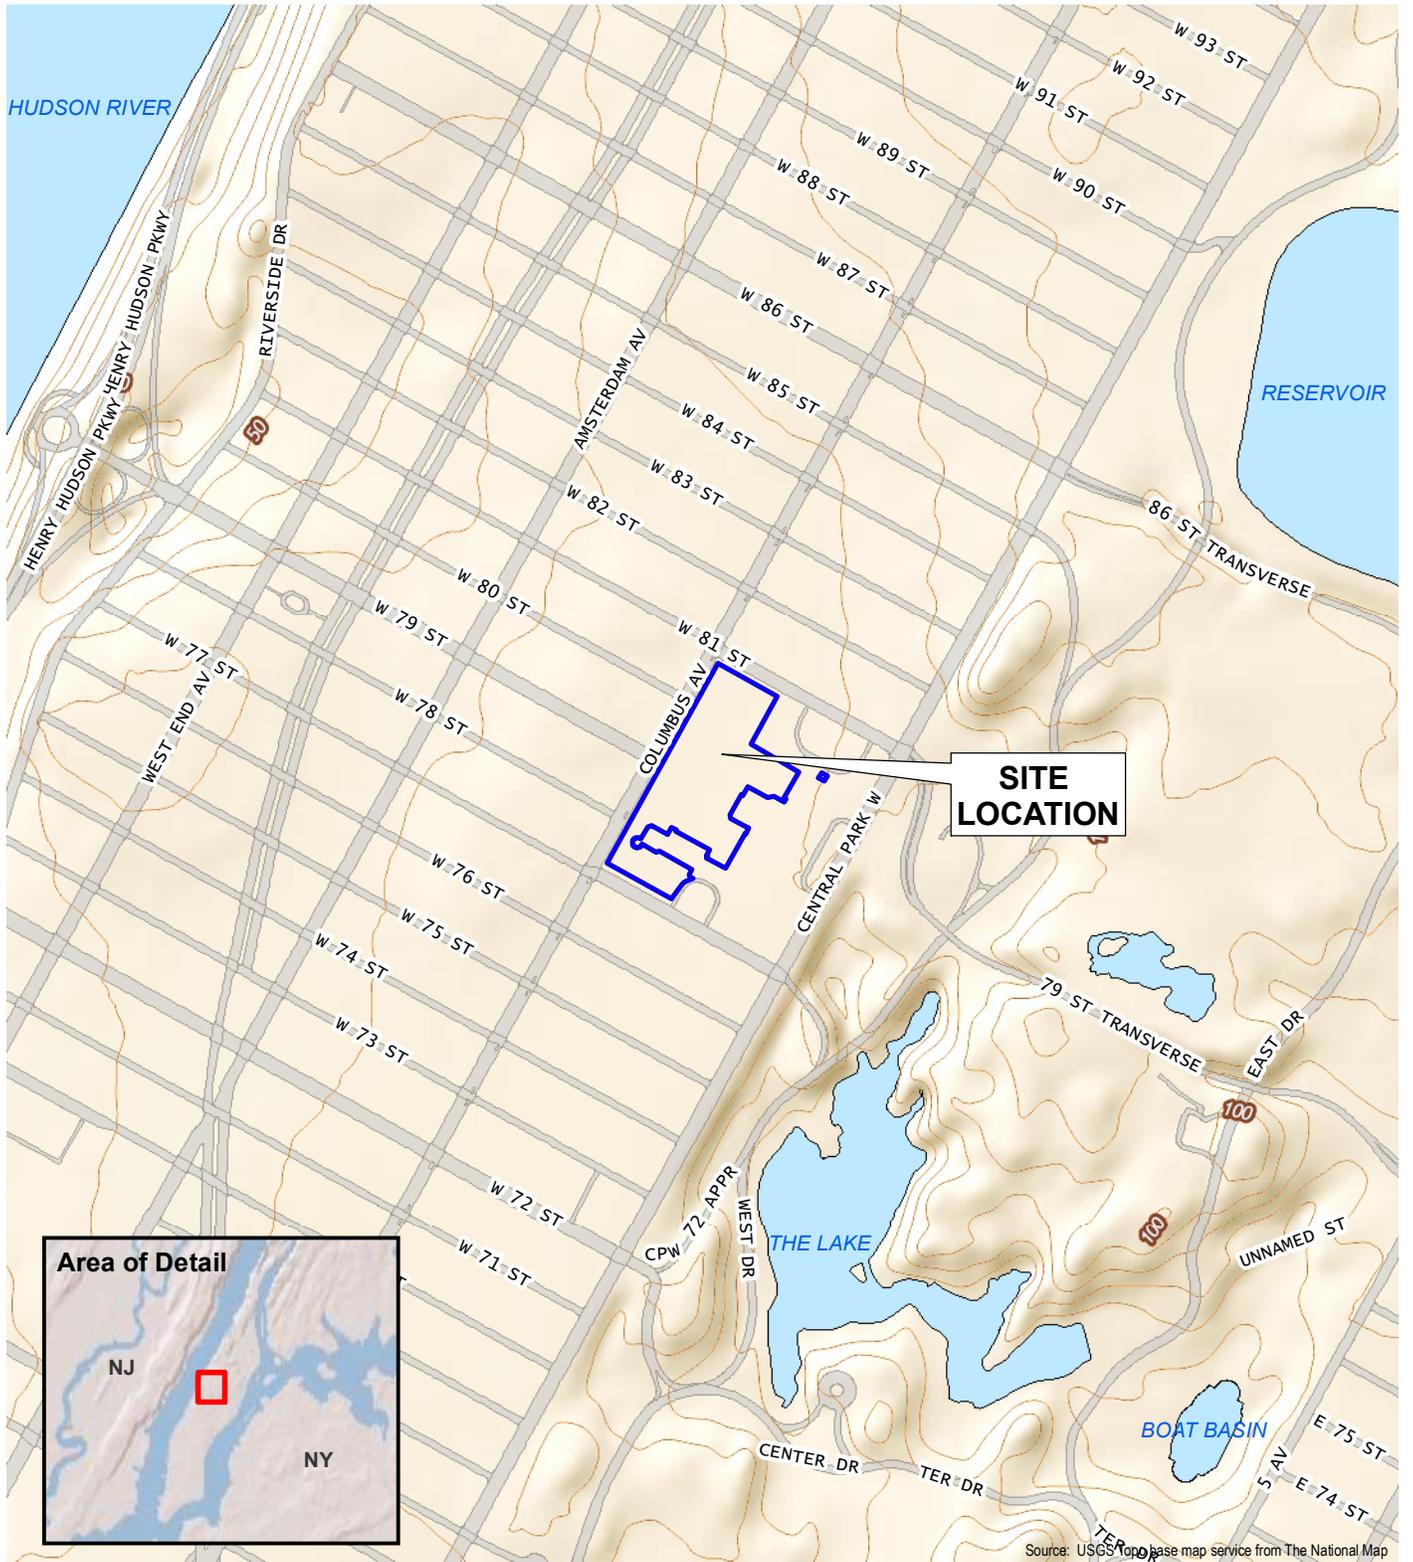

1. Scrub using tap water/Simple Green<sup>®</sup> mixture and bristle brush
2. Rinse with tap water.
3. Scrub again with tap water/ Simple Green<sup>®</sup> and bristle brush.
4. Rinse with tap water.
5. Rinse with distilled water.
6. Air dry the equipment.

## **4.0 REPORT**

A subsurface investigation report will be prepared following the completion of the sampling and analysis program and will be submitted to NYCDEP for approval. The report will describe field procedures and observations, include soil boring logs, a site plan showing sample locations, summarize analytical results, discuss their significance, and provide appropriate recommendations.

## **1.0 INTRODUCTION**

The Site comprises portions of the American Museum of Natural History (AMNH or the Museum) including Sections 1, 7A, 8, 11, 11A, 11B, 15, 15A, 16, and 17, Weston Pavilion, adjacent Museum yards, and an approximately 76,000-square foot (SF) portion of Theodore Roosevelt Park, defined legally as Tax Block 1130, part of Lot 1. The Site, along with the remainder of the Museum buildings and grounds, is located at 200 Central Park West, on New York City-owned mapped parkland under the jurisdiction of the New York City Department of Parks and Recreation (NYC Parks), as shown on Figure 1.

A Phase I Environmental Site Assessment (ESA) conducted for the Site (AKRF, Inc., November 2016) identified potential sources of contamination, including: past and present on-site chemical storage and hazardous waste generation; past and present on-site petroleum storage; a historical on-site power plant; and a historical on-site auto house.

The subsurface investigation will include the collection of soil, groundwater (if encountered), and soil gas samples. This environmental Health and Safety Plan (HASP) has been developed for implementation during site investigation activities conducted by all personnel on-site, both AKRF employees and others. This HASP does not discuss routine health and safety issues common to general construction/excavation, including but not limited to slips, trips, falls, shoring, and other physical hazards.

All AKRF employees are directed that all work must be performed in accordance with the AKRF's Generic HASP and all OSHA applicable regulations for the work activities required for the project. All project personnel are furthermore directed that they are not permitted to enter Permit Required Confined Spaces (as defined by OSHA). For issues unrelated to contaminated materials, all non-AKRF employees are to be bound by all applicable OSHA regulations as well as any more stringent requirements specified by their employer in their corporate HASP or otherwise. AKRF is not responsible for providing oversight for issues unrelated to contaminated materials for non-employees. This oversight shall be the responsibility of the employer of that worker or other official designated by that employer.

## 2.2 Designated Personnel

AKRF will appoint one of its on-site personnel as the Site Safety Officer (SSO). This individual will be responsible for the implementation of the HASP. The SSO will have a 4-year college degree in occupational safety or a related science/engineering field, and experience in

implementation of air monitoring and hazardous materials sampling programs. Health and safety training required for the SSO and all field personnel are outlined in Section 2.3 of this HASP.

### **2.3 Training**

All personnel who enter the work area while intrusive activities are being performed will have completed a 40-hour training course that meets OSHA requirements of the Code of Federal Regulations, Title 29 (29 CFR) Part 1910, Occupational Safety and Health Standards. In addition, all personnel will have up-to-date 8-hour refresher training. The training will allow personnel to recognize and understand the potential hazards to health and safety. All field personnel must attend a training program, whose purpose is to:

- Make them aware of the potential hazards they may encounter;
- Provide the knowledge and skills necessary for them to perform the work with minimal risk to health and safety; Make them aware of the purpose and limitations of safety equipment; and
- Ensure that they can safely avoid or escape from emergencies.

Each member of the field crew will be instructed in these objectives before he/she goes onto the Site. A site safety meeting will be conducted at the start of the project. Additional meetings shall be conducted, as necessary, for new personnel working at the Site.

### **2.4 Medical Surveillance Program**

All AKRF and subcontractor personnel performing field work involving subsurface disturbance at the Site are required to have passed a complete medical surveillance examination in accordance with 29 CFR 1910.120 (f). A physician's medical release for work will be confirmed by the SSO before an employee can begin site activities. The medical release shall consider the type of work to be performed and the required PPE. The medical examination will, at a minimum, be provided annually and upon termination of hazardous waste site work.

### **2.5 Site Work Zones**

During any activities involving subsurface disturbance, the work area must be divided into various zones to prevent the spread of contamination, ensure that proper protective equipment is donned, and provide an area for decontamination.

The Exclusion Zone is defined as the area where exposure to impacted media could be encountered. The Contamination Reduction Zone (CRZ) is the area where decontamination procedures take place and is located next to the Exclusion Zone. The Support Zone is the area where support facilities such as vehicles, fire extinguishers, and first aid supplies are located. The emergency staging area (part of the Support Zone) is the area where all workers on-site would assemble in the event of an emergency. A summary of these areas is provided below. These zones may be changed by the SSO, depending on that day's activities. All field personnel will be informed of the location of these zones before work begins.

| <b>Task</b>                                                                                                                                                              | <b>Exclusion Zone</b>       | <b>CRZ</b>                  | <b>Support Zone</b> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|-----------------------------|---------------------|
| <b>Soil Borings</b>                                                                                                                                                      | <b>10 ft from drill rig</b> | <b>25 ft from drill rig</b> | <b>As Needed</b>    |
| Comments:<br>Control measures such as “caution tape” and/or traffic cones will be placed around the perimeter of the work area when work is being done in a public area. |                             |                             |                     |

## 2.6 Air Monitoring

The purpose of the air monitoring program is to identify any exposure of the field personnel to potential environmental hazards in the soil and groundwater. Results of the air monitoring will be used to determine the appropriate response action, if needed.

### 2.6.1 Volatile Organic Compounds

A photoionization detector (PID) will be used to perform air monitoring during soil disturbance activities to determine airborne levels of total VOCs. The PID will be calibrated at the start of the work day with a 100 ppm isobutylene standard.

### 2.6.2 Work Zone Air Monitoring

Real time air monitoring will be performed with the PID. Measurements will be taken prior to commencement of work and continuously during the work, as outlined in the following table. Measurements will be made as close to the workers as practicable and at the breathing height of the workers. The SSO shall set up the equipment and confirm that it is working properly. His/her designee may oversee the air measurements during the day. The initial measurement for the day will be performed before the start of work and will establish the background level for that day. The final measurement for the day will be performed after the end of work. The action levels and required responses are listed in the following table.

| <b>Instrument</b> | <b>Action Level</b>                | <b>Response Action</b>                                     |
|-------------------|------------------------------------|------------------------------------------------------------|
| PID               | Less than 10 ppm in breathing zone | Level D or D-Modified                                      |
|                   | Between 10 ppm and 50 ppm          | Level C                                                    |
|                   | More than 50 ppm                   | Stop work. Resume work when readings are less than 50 ppm. |

## 2.7 Personal Protection Equipment

The personal protection equipment required for various kinds of site investigation tasks are based on 29 CFR 1910.120, Hazardous Waste Operations and Emergency Response, Appendix B, “General Description and Discussion of the Levels of Protection and Protective Gear.”

AKRF field personnel and other site personnel shall wear, at a minimum, Level D personal protective equipment. The protection will be based on the air monitoring described in Section 2.6.

| LEVEL OF PROTECTION & PPE                                                                                                                                                                                     | Task                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| <b>Level D</b><br><input checked="" type="checkbox"/> Steel Toe Shoes<br><input checked="" type="checkbox"/> Hard Hat<br>(within 25 ft of drill rig)<br><input checked="" type="checkbox"/> Work Gloves       | Soil Boring/Water Sampling                                                          |
| <b>Level D – Modified (in addition to Level D)</b><br><input checked="" type="checkbox"/> Tyvek Coveralls<br><input type="checkbox"/> Saranex Coveralls                                                       | Soil Boring/Water Sampling, PID readings elevated above background but below 10 ppm |

| Comments:<br>Cartridges to be changed out at least once per shift unless warranted beforehand (e.g., more difficult to breathe or any odors detected).                                                        |                                                                                     |

**2.8 General Work Practices**

To protect the health and safety of the field personnel, field personnel will adhere to the guidelines listed below during activities involving subsurface disturbance:

- Eating, drinking, and chewing gum or tobacco are prohibited except in designated areas on the Site. These areas will be designated by the SSO. Smoking, including e-cigarettes, is prohibited throughout the Site.
- Workers must wash their hands thoroughly on leaving the work area and before eating, drinking, or any other such activity.
- The workers should shower as soon as possible after leaving the Site. Contact with contaminated or suspected surfaces should be avoided.
- The buddy system should always be used; each buddy should watch for signs of fatigue, exposure, and heat/cold stress.

### 3.0 EMERGENCY PROCEDURES AND EMERGENCY RESPONSE PLAN

The field crew will be equipped with emergency equipment, such as a first aid kit and disposable eye washes. In the case of a medical emergency, the SSO will determine the nature of the emergency and he/she will have someone call for an ambulance, if needed. If the nature of the injury is not serious, i.e., the person can be moved without expert emergency medical personnel, he/she should be taken to a hospital by on-site personnel. Directions to the hospital are provided below, and a hospital route map is attached.

#### 3.1 HOSPITAL DIRECTIONS

|                          |                                                                                                                                                              |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hospital Name:</b>    | Mount Sinai West                                                                                                                                             |
| <b>Phone Number:</b>     | (212) 523-4000                                                                                                                                               |
| <b>Address/Location:</b> | 1000 Tenth Avenue – New York, New York<br>(The Emergency Department is located on West 59 <sup>th</sup> Street between Columbus Avenue and Amsterdam Avenue) |
| <b>Directions:</b>       | 1. Go SOUTH on <i>Columbus Avenue</i><br>2. Turn RIGHT onto <i>West 59<sup>th</sup> Street</i><br>The Emergency Department entrance will be on the LEFT.     |

#### 3.2 EMERGENCY CONTACTS

### 4.0 APPROVAL & ACKNOWLEDGMENTS OF HASP

#### APPROVAL

Signed: \_\_\_\_\_ Date: \_\_\_\_\_  
AKRF Project Manager

Signed: \_\_\_\_\_ Date: \_\_\_\_\_  
AKRF Health and Safety Officer

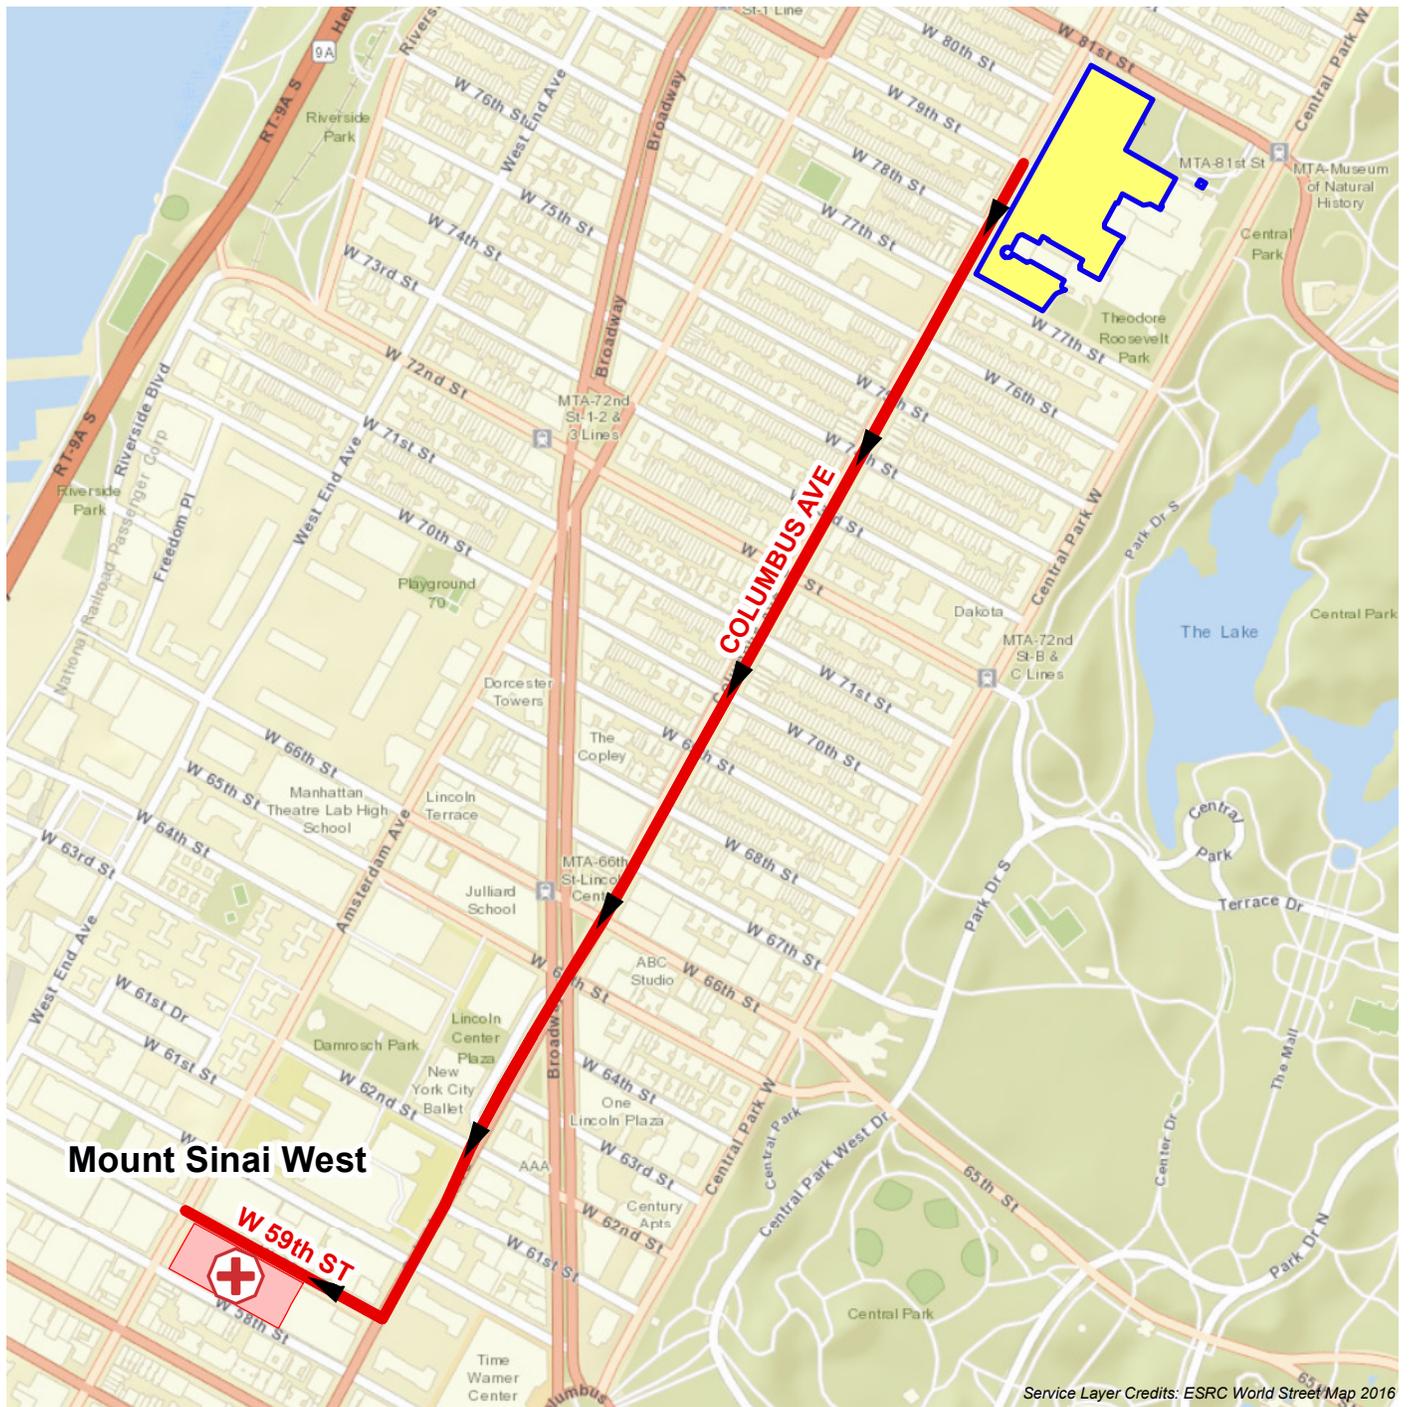

Below is an affidavit that must be signed by all workers who enter the Site. A copy of the HASP must be on-site at all times and will be kept by the SSO.

#### AFFIDAVIT

I, \_\_\_\_\_ (name), of \_\_\_\_\_ (company name), have read the Health and Safety Plan (HASP) for the AMNH Richard Gilder Center for Science, Education and Innovation site. I agree to conduct all on-site work in accordance with the requirements set forth in this HASP and understand that failure to comply with this HASP could lead to my removal from the Site.

Signed: \_\_\_\_\_ Company: \_\_\_\_\_ Date: \_\_\_\_\_

**APPENDIX A**  
**POTENTIAL HEALTH EFFECTS FROM ON-SITE CONTAMINANTS**

This fact sheet answers the most frequently asked health questions (FAQs) about benzene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS: Benzene is a widely used chemical formed from both natural processes and human activities. Breathing benzene can cause drowsiness, dizziness, and unconsciousness; long-term benzene exposure causes effects on the bone marrow and can cause anemia and leukemia. Benzene has been found in at least 813 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What is benzene?

(Pronounced bĕn'zĕn')

Benzene is a colorless liquid with a sweet odor. It evaporates into the air very quickly and dissolves slightly in water. It is highly flammable and is formed from both natural processes and human activities.

Benzene is widely used in the United States; it ranks in the top 20 chemicals for production volume. Some industries use benzene to make other chemicals which are used to make plastics, resins, and nylon and synthetic fibers. Benzene is also used to make some types of rubbers, lubricants, dyes, detergents, drugs, and pesticides. Natural sources of benzene include volcanoes and forest fires. Benzene is also a natural part of crude oil, gasoline, and cigarette smoke.

## What happens to benzene when it enters the environment?

- Industrial processes are the main source of benzene in the environment.
- Benzene can pass into the air from water and soil.
- It reacts with other chemicals in the air and breaks down within a few days.
- Benzene in the air can attach to rain or snow and be carried back down to the ground.

- It breaks down more slowly in water and soil, and can pass through the soil into underground water.
- Benzene does not build up in plants or animals.

## How might I be exposed to benzene?

- Outdoor air contains low levels of benzene from tobacco smoke, automobile service stations, exhaust from motor vehicles, and industrial emissions.
- Indoor air generally contains higher levels of benzene from products that contain it such as glues, paints, furniture wax, and detergents.
- Air around hazardous waste sites or gas stations will contain higher levels of benzene.
- Leakage from underground storage tanks or from hazardous waste sites containing benzene can result in benzene contamination of well water.
- People working in industries that make or use benzene may be exposed to the highest levels of it.
- A major source of benzene exposures is tobacco smoke.

## How can benzene affect my health?

Breathing very high levels of benzene can result in death, while high levels can cause drowsiness, dizziness, rapid heart rate, headaches, tremors, confusion, and unconsciousness. Eating or drinking foods containing high levels of benzene can cause vomiting, irritation of the stomach, dizziness, sleepiness, convulsions, rapid heart rate, and death.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

The major effect of benzene from long-term (365 days or longer) exposure is on the blood. Benzene causes harmful effects on the bone marrow and can cause a decrease in red blood cells leading to anemia. It can also cause excessive bleeding and can affect the immune system, increasing the chance for infection.

Some women who breathed high levels of benzene for many months had irregular menstrual periods and a decrease in the size of their ovaries. It is not known whether benzene exposure affects the developing fetus in pregnant women or fertility in men.

Animal studies have shown low birth weights, delayed bone formation, and bone marrow damage when pregnant animals breathed benzene.

### **How likely is benzene to cause cancer?**

The Department of Health and Human Services (DHHS) has determined that benzene is a known human carcinogen. Long-term exposure to high levels of benzene in the air can cause leukemia, cancer of the blood-forming organs.

### **Is there a medical test to show whether I've been exposed to benzene?**

Several tests can show if you have been exposed to benzene. There is test for measuring benzene in the breath; this test must be done shortly after exposure. Benzene can also be measured in the blood, however, since benzene disappears rapidly from the blood, measurements are accurate only for recent exposures.

In the body, benzene is converted to products called metabolites. Certain metabolites can be measured in the urine. However, this test must be done shortly after exposure and is not a reliable indicator of how much benzene you have been exposed to, since the metabolites may be present in urine from other sources.

### **Has the federal government made recommendations to protect human health?**

The EPA has set the maximum permissible level of benzene in drinking water at 0.005 milligrams per liter (0.005 mg/L). The EPA requires that spills or accidental releases into the environment of 10 pounds or more of benzene be reported to the EPA.

The Occupational Safety and Health Administration (OSHA) has set a permissible exposure limit of 1 part of benzene per million parts of air (1 ppm) in the workplace during an 8-hour workday, 40-hour workweek.

### **Glossary**

Anemia: A decreased ability of the blood to transport oxygen.

Carcinogen: A substance with the ability to cause cancer.

CAS: Chemical Abstracts Service.

Chromosomes: Parts of the cells responsible for the development of hereditary characteristics.

Metabolites: Breakdown products of chemicals.

Milligram (mg): One thousandth of a gram.

Pesticide: A substance that kills pests.

This ToxFAQs information is taken from the 1997 Toxicological Profile for Benzene (update) produced by the Agency for Toxic Substances and Disease Registry, Public Health Service, U.S. Department of Health and Human Services, Public Health Service in Atlanta, GA.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop E-29, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 404-498-0093. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html> ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about ethylbenzene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Ethylbenzene is a colorless liquid found in a number of products including gasoline and paints. Breathing very high levels can cause dizziness and throat and eye irritation. Ethylbenzene has been found in at least 731 of the 1,467 National Priorities List sites identified by the Environmental Protection Agency (EPA).

### What is ethylbenzene?

(Pronounced ěth' əl bĕn' zĕn')

Ethylbenzene is a colorless, flammable liquid that smells like gasoline. It is found in natural products such as coal tar and petroleum and is also found in manufactured products such as inks, insecticides, and paints.

Ethylbenzene is used primarily to make another chemical, styrene. Other uses include as a solvent, in fuels, and to make other chemicals.

### What happens to ethylbenzene when it enters the environment?

- Ethylbenzene moves easily into the air from water and soil.
- It takes about 3 days for ethylbenzene to be broken down in air into other chemicals.
- Ethylbenzene may be released to water from industrial discharges or leaking underground storage tanks.
- In surface water, ethylbenzene breaks down by reacting with other chemicals found naturally in water.
- In soil, it is broken down by soil bacteria.

### How might I be exposed to ethylbenzene?

- Breathing air containing ethylbenzene, particularly in areas near factories or highways.
- Drinking contaminated tap water.
- Working in an industry where ethylbenzene is used or made.
- Using products containing it, such as gasoline, carpet glues, varnishes, and paints.

### How can ethylbenzene affect my health?

Limited information is available on the effects of ethylbenzene on people's health. The available information shows dizziness, throat and eye irritation, tightening of the chest, and a burning sensation in the eyes of people exposed to high levels of ethylbenzene in air.

Animals studies have shown effects on the nervous system, liver, kidneys, and eyes from breathing ethylbenzene in air.

### How likely is ethylbenzene to cause cancer?

The EPA has determined that ethylbenzene is not classified as to human carcinogenicity.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

No studies in people have shown that ethylbenzene exposure can result in cancer. Two available animal studies suggest that ethylbenzene may cause tumors.

### **How can ethylbenzene affect children?**

Children may be exposed to ethylbenzene through inhalation of consumer products, including gasoline, paints, inks, pesticides, and carpet glue. We do not know whether children are more sensitive to the effects of ethylbenzene than adults.

It is not known whether ethylbenzene can affect the development of the human fetus. Animal studies have shown that when pregnant animals were exposed to ethylbenzene in air, their babies had an increased number of birth defects.

### **How can families reduce the risk of exposure to ethylbenzene?**

Exposure to ethylbenzene vapors from household products and newly installed carpeting can be minimized by using adequate ventilation.

Household chemicals should be stored out of reach of children to prevent accidental poisoning. Always store household chemicals in their original containers; never store them in containers children would find attractive to eat or drink from, such as old soda bottles. Gasoline should be stored in a gasoline can with a locked cap.

Sometimes older children sniff household chemicals, including ethylbenzene, in an attempt to get high. Talk with your children about the dangers of sniffing chemicals.

### **Is there a medical test to show whether I've been exposed to ethylbenzene?**

Ethylbenzene is found in the blood, urine, breath, and

some body tissues of exposed people. The most common way to test for ethylbenzene is in the urine. This test measures substances formed by the breakdown of ethylbenzene. This test needs to be done within a few hours after exposure occurs, because the substances leave the body very quickly.

These tests can show you were exposed to ethylbenzene, but cannot predict the kind of health effects that might occur.

### **Has the federal government made recommendations to protect human health?**

The EPA has set a maximum contaminant level of 0.7 milligrams of ethylbenzene per liter of drinking water (0.7 mg/L).

The EPA requires that spills or accidental releases into the environment of 1,000 pounds or more of ethylbenzene be reported to the EPA.

The Occupational Safety and Health Administration (OSHA) has set an occupational exposure limit of 100 parts of ethylbenzene per million parts of air (100 ppm) for an 8-hour workday, 40-hour workweek.

You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about fuel oils. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**SUMMARY: Fuel oils are liquid mixtures produced from petroleum, and their use mostly involves burning them as fuels. Drinking or breathing fuel oils may cause nausea or nervous system effects. However, exposure under normal use conditions is not likely to be harmful. Fuel oils have been found in at least 26 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What are fuel oils?

(Pronounced fyoo'el oilz)

Fuel oils are a variety of yellowish to light brown liquid mixtures that come from crude petroleum. Some chemicals found in fuel oils may evaporate easily, while others may more easily dissolve in water.

Fuel oils are produced by different petroleum refining processes, depending on their intended uses. Fuel oils may be used as fuel for engines, lamps, heaters, furnaces, and stoves, or as solvents.

Some commonly found fuel oils include kerosene, diesel fuel, jet fuel, range oil, and home heating oil. These fuel oils differ from one another by their hydrocarbon compositions, boiling point ranges, chemical additives, and uses.

## What happens to fuel oils when they enter the environment?

- Some chemicals found in fuel oils may evaporate into the air from open containers or contaminated soil or water.
- Some chemicals found in fuel oils may dissolve in water after spills to surface waters or leaks from underground storage tanks.

- Some chemicals found in fuel oils may stick to particles in water, which will eventually cause them to settle to the bottom sediment.
- Some of the chemicals found in fuel oils may be broken down slowly in air, water, and soil by sunlight or small organisms.
- Some of the chemicals found in fuel oils may build up significantly in plants and animals.

## How might I be exposed to fuel oils?

- Using a home kerosene heater or stove, or using fuel oils at work.
- Breathing air in home or building basements that has been contaminated with fuel oil vapors entering from the soil.
- Drinking or swimming in water that has been contaminated with fuel oils from a spill or a leaking underground storage tank.
- Touching soil contaminated with fuel oils.
- Using fuel oils to wash paint or grease from skin or equipment.

## How can fuel oils affect my health?

Little information is available about the health effects that may be caused by fuel oils. People who use kerosene

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

stoves for cooking do not seem to have any health problems related to their exposure.

Breathing some fuel oils for short periods may cause nausea, eye irritation, increased blood pressure, headache, lightheadedness, loss of appetite, poor coordination, and difficulty concentrating. Breathing diesel fuel vapors for long periods may cause kidney damage and lower your blood's ability to clot.

Drinking small amounts of kerosene may cause vomiting, diarrhea, coughing, stomach swelling and cramps, drowsiness, restlessness, painful breathing, irritability, and unconsciousness. Drinking large amounts of kerosene may cause convulsions, coma, or death. Skin contact with kerosene for short periods may cause itchy, red, sore, or peeling skin.

### How likely are fuel oils to cause cancer?

The International Agency for Research on Cancer (IARC) has determined that some fuel oils (heavy) may possibly cause cancer in humans, but for other fuel oils (light) there is not enough information to make a determination. IARC has also determined that occupational exposures to fuel oils during petroleum refining are probably carcinogenic in humans.

Some studies with mice have suggested that repeated contact with fuel oils may cause liver or skin cancer. However, other mouse studies have found this not to be the case. No studies are available in other animals or in people on the carcinogenic effects of fuel oils.

### Is there a medical test to show whether I've been exposed to fuel oils?

There is no medical test that shows if you have been exposed to fuel oils. Tests are available to determine if some of

the chemicals commonly found in fuel oils are in your blood. However, the presence of these chemicals in blood may not necessarily mean that you have been exposed to fuel oils.

### Has the federal government made recommendations to protect human health?

The Occupational Safety and Health Administration (OSHA) and the Air Force Office of Safety and Health (AFOSH) have set a permissible exposure level (PEL) of 400 parts of petroleum distillates per million parts of air (400 ppm) for an 8-hour workday, 40-hour workweek.

The National Institute for Occupational Safety and Health (NIOSH) recommends that average workplace air levels not exceed 350 milligrams of petroleum distillates per cubic meter of air (350 mg/m<sup>3</sup>) for a 40-hour workweek.

The Department of Transportation (DOT) lists fuel oils as hazardous materials and, therefore, regulates their transportation.

### Glossary

Carcinogenic: Able to cause cancer.

CAS: Chemical Abstracts Service.

Evaporate: To change into a vapor or a gas.

Hydrocarbon: Any compound made up of hydrogen and carbon.

Milligram (mg): One thousandth of a gram.

ppm: Parts per million.

Sediment: Mud and debris that have settled to the bottom of a body of water.

This fact sheet answers the most frequently asked health questions (FAQs) about lead. For more information, call the ATSDR Information Center at 1-800-232-4636. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It is important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Exposure to lead can happen from breathing workplace air or dust, eating contaminated foods, or drinking contaminated water. Children can be exposed from eating lead-based paint chips or playing in contaminated soil. Lead can damage the nervous system, kidneys, and reproductive system. Lead has been found in at least 1,272 of the 1,684 National Priority List sites identified by the Environmental Protection Agency (EPA).

### What is lead?

Lead is a naturally occurring bluish-gray metal found in small amounts in the earth's crust. Lead can be found in all parts of our environment. Much of it comes from human activities including burning fossil fuels, mining, and manufacturing.

Lead has many different uses. It is used in the production of batteries, ammunition, metal products (solder and pipes), and devices to shield X-rays. Because of health concerns, lead from paints and ceramic products, caulking, and pipe solder has been dramatically reduced in recent years. The use of lead as an additive to gasoline was banned in 1996 in the United States.

### What happens to lead when it enters the environment?

- Lead itself does not break down, but lead compounds are changed by sunlight, air, and water.
- When lead is released to the air, it may travel long distances before settling to the ground.
- Once lead falls onto soil, it usually sticks to soil particles.
- Movement of lead from soil into groundwater will depend on the type of lead compound and the characteristics of the soil.

### How might I be exposed to lead?

- Eating food or drinking water that contains lead. Water pipes in some older homes may contain lead solder. Lead can leach out into the water.

- Spending time in areas where lead-based paints have been used and are deteriorating. Deteriorating lead paint can contribute to lead dust.

- Working in a job where lead is used or engaging in certain hobbies in which lead is used, such as making stained glass.

- Using health-care products or folk remedies that contain lead.

### How can lead affect my health?

The effects of lead are the same whether it enters the body through breathing or swallowing. Lead can affect almost every organ and system in your body. The main target for lead toxicity is the nervous system, both in adults and children. Long-term exposure of adults can result in decreased performance in some tests that measure functions of the nervous system. It may also cause weakness in fingers, wrists, or ankles. Lead exposure also causes small increases in blood pressure, particularly in middle-aged and older people and can cause anemia. Exposure to high lead levels can severely damage the brain and kidneys in adults or children and ultimately cause death. In pregnant women, high levels of exposure to lead may cause miscarriage. High-level exposure in men can damage the organs responsible for sperm production.

### How likely is lead to cause cancer?

We have no conclusive proof that lead causes cancer in humans. Kidney tumors have developed in rats and mice that had been given large doses of some kind of lead compounds. The Department of Health and Human Services

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

(DHHS) has determined that lead and lead compounds are reasonably anticipated to be human carcinogens and the EPA has determined that lead is a probable human carcinogen. The International Agency for Research on Cancer (IARC) has determined that inorganic lead is probably carcinogenic to humans and that there is insufficient information to determine whether organic lead compounds will cause cancer in humans.

### How can lead affect children?

Small children can be exposed by eating lead-based paint chips, chewing on objects painted with lead-based paint, or swallowing house dust or soil that contains lead.

Children are more vulnerable to lead poisoning than adults. A child who swallows large amounts of lead may develop blood anemia, severe stomachache, muscle weakness, and brain damage. If a child swallows smaller amounts of lead, much less severe effects on blood and brain function may occur. Even at much lower levels of exposure, lead can affect a child's mental and physical growth.

Exposure to lead is more dangerous for young and unborn children. Unborn children can be exposed to lead through their mothers. Harmful effects include premature births, smaller babies, decreased mental ability in the infant, learning difficulties, and reduced growth in young children. These effects are more common if the mother or baby was exposed to high levels of lead. Some of these effects may persist beyond childhood.

### How can families reduce the risks of exposure to lead?

- Avoid exposure to sources of lead.
- Do not allow children to chew on mouth surfaces that may have been painted with lead-based paint.
- If you have a water lead problem, run or flush water that has been standing overnight before drinking or cooking with it.
- Some types of paints and pigments that are used as make-up or hair coloring contain lead. Keep these kinds of products away from children
- If your home contains lead-based paint or you live in an area contaminated with lead, wash children's hands and faces

often to remove lead dusts and soil, and regularly clean the house of dust and tracked in soil.

### Is there a medical test to determine whether I've been exposed to lead?

A blood test is available to measure the amount of lead in your blood and to estimate the amount of your recent exposure to lead. Blood tests are commonly used to screen children for lead poisoning. Lead in teeth or bones can be measured by X-ray techniques, but these methods are not widely available. Exposure to lead also can be evaluated by measuring erythrocyte protoporphyrin (EP) in blood samples. EP is a part of red blood cells known to increase when the amount of lead in the blood is high. However, the EP level is not sensitive enough to identify children with elevated blood lead levels below about 25 micrograms per deciliter ( $\mu\text{g}/\text{dL}$ ). These tests usually require special analytical equipment that is not available in a doctor's office. However, your doctor can draw blood samples and send them to appropriate laboratories for analysis.

### Has the federal government made recommendations to protect human health?

The Centers for Disease Control and Prevention (CDC) recommends that states test children at ages 1 and 2 years. Children should be tested at ages 3–6 years if they have never been tested for lead, if they receive services from public assistance programs for the poor such as Medicaid or the Supplemental Food Program for Women, Infants, and Children, if they live in a building or frequently visit a house built before 1950; if they visit a home (house or apartment) built before 1978 that has been recently remodeled; and/or if they have a brother, sister, or playmate who has had lead poisoning. CDC considers a blood lead level of 10  $\mu\text{g}/\text{dL}$  to be a level of concern for children.

EPA limits lead in drinking water to 15  $\mu\text{g}$  per liter.

Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

**This fact sheet answers the most frequently asked health questions (FAQs) about mercury. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.**

**HIGHLIGHTS: Exposure to mercury occurs from breathing contaminated air, ingesting contaminated water and food, and having dental and medical treatments. Mercury, at high levels, may damage the brain, kidneys, and developing fetus. This chemical has been found in at least 714 of 1,467 National Priorities List sites identified by the Environmental Protection Agency.**

### What is mercury?

(Pronounced mŭr/kyə-rē)

Mercury is a naturally occurring metal which has several forms. The metallic mercury is a shiny, silver-white, odorless liquid. If heated, it is a colorless, odorless gas.

Mercury combines with other elements, such as chlorine, sulfur, or oxygen, to form inorganic mercury compounds or "salts," which are usually white powders or crystals. Mercury also combines with carbon to make organic mercury compounds. The most common one, methylmercury, is produced mainly by microscopic organisms in the water and soil. More mercury in the environment can increase the amounts of methylmercury that these small organisms make.

Metallic mercury is used to produce chlorine gas and caustic soda, and is also used in thermometers, dental fillings, and batteries. Mercury salts are sometimes used in skin lightening creams and as antiseptic creams and ointments.

### What happens to mercury when it enters the environment?

- Inorganic mercury (metallic mercury and inorganic mercury compounds) enters the air from mining ore deposits, burning coal and waste, and from manufacturing plants.
- It enters the water or soil from natural deposits, disposal of wastes, and volcanic activity.

- Methylmercury may be formed in water and soil by small organisms called bacteria.
- Methylmercury builds up in the tissues of fish. Larger and older fish tend to have the highest levels of mercury.

### How might I be exposed to mercury?

- Eating fish or shellfish contaminated with methylmercury.
- Breathing vapors in air from spills, incinerators, and industries that burn mercury-containing fuels.
- Release of mercury from dental work and medical treatments.
- Breathing contaminated workplace air or skin contact during use in the workplace (dental, health services, chemical, and other industries that use mercury).
- Practicing rituals that include mercury.

### How can mercury affect my health?

The nervous system is very sensitive to all forms of mercury. Methylmercury and metallic mercury vapors are more harmful than other forms, because more mercury in these forms reaches the brain. Exposure to high levels of metallic, inorganic, or organic mercury can permanently damage the brain, kidneys, and developing fetus. Effects on brain functioning may result in irritability, shyness, tremors, changes in vision or hearing, and memory problems.

Short-term exposure to high levels of metallic mercury vapors may cause effects including lung damage, nausea,

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

vomiting, diarrhea, increases in blood pressure or heart rate, skin rashes, and eye irritation.

### How likely is mercury to cause cancer?

There are inadequate human cancer data available for all forms of mercury. Mercuric chloride has caused increases in several types of tumors in rats and mice, and methylmercury has caused kidney tumors in male mice. The EPA has determined that mercuric chloride and methylmercury are possible human carcinogens.

### How can mercury affect children?

Very young children are more sensitive to mercury than adults. Mercury in the mother's body passes to the fetus and may accumulate there. It can also pass to a nursing infant through breast milk. However, the benefits of breast feeding may be greater than the possible adverse effects of mercury in breast milk.

Mercury's harmful effects that may be passed from the mother to the fetus include brain damage, mental retardation, incoordination, blindness, seizures, and inability to speak. Children poisoned by mercury may develop problems of their nervous and digestive systems, and kidney damage.

### How can families reduce the risk of exposure to mercury?

Carefully handle and dispose of products that contain mercury, such as thermometers or fluorescent light bulbs. Do not vacuum up spilled mercury, because it will vaporize and increase exposure. If a large amount of mercury has been spilled, contact your health department. Teach children not to play with shiny, silver liquids.

Properly dispose of older medicines that contain mercury. Keep all mercury-containing medicines away from children.

Pregnant women and children should keep away from

rooms where liquid mercury has been used.

Learn about wildlife and fish advisories in your area from your public health or natural resources department.

### Is there a medical test to show whether I've been exposed to mercury?

Tests are available to measure mercury levels in the body. Blood or urine samples are used to test for exposure to metallic mercury and to inorganic forms of mercury. Mercury in whole blood or in scalp hair is measured to determine exposure to methylmercury. Your doctor can take samples and send them to a testing laboratory.

### Has the federal government made recommendations to protect human health?

The EPA has set a limit of 2 parts of mercury per billion parts of drinking water (2 ppb).

The Food and Drug Administration (FDA) has set a maximum permissible level of 1 part of methylmercury in a million parts of seafood (1 ppm).

The Occupational Safety and Health Administration (OSHA) has set limits of 0.1 milligram of organic mercury per cubic meter of workplace air (0.1 mg/m<sup>3</sup>) and 0.05 mg/m<sup>3</sup> of metallic mercury vapor for 8-hour shifts and 40-hour work weeks.

Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

**This fact sheet answers the most frequently asked health questions (FAQs) about polycyclic aromatic hydrocarbons (PAHs). For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.**

**SUMMARY: Exposure to polycyclic aromatic hydrocarbons usually occurs by breathing air contaminated by wild fires or coal tar, or by eating foods that have been grilled. PAHs have been found in at least 600 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What are polycyclic aromatic hydrocarbons?

(Pronounced pŏl'ī-sī'klīk ār'ə-măt'īk hī'drə-kar'bənz)

Polycyclic aromatic hydrocarbons (PAHs) are a group of over 100 different chemicals that are formed during the incomplete burning of coal, oil and gas, garbage, or other organic substances like tobacco or charbroiled meat. PAHs are usually found as a mixture containing two or more of these compounds, such as soot.

Some PAHs are manufactured. These pure PAHs usually exist as colorless, white, or pale yellow-green solids. PAHs are found in coal tar, crude oil, creosote, and roofing tar, but a few are used in medicines or to make dyes, plastics, and pesticides.

## What happens to PAHs when they enter the environment?

- PAHs enter the air mostly as releases from volcanoes, forest fires, burning coal, and automobile exhaust.
- PAHs can occur in air attached to dust particles.
- Some PAH particles can readily evaporate into the air from soil or surface waters.
- PAHs can break down by reacting with sunlight and other chemicals in the air, over a period of days to weeks.

- PAHs enter water through discharges from industrial and wastewater treatment plants.
- Most PAHs do not dissolve easily in water. They stick to solid particles and settle to the bottoms of lakes or rivers.
- Microorganisms can break down PAHs in soil or water after a period of weeks to months.
- In soils, PAHs are most likely to stick tightly to particles; certain PAHs move through soil to contaminate underground water.
- PAH contents of plants and animals may be much higher than PAH contents of soil or water in which they live.

## How might I be exposed to PAHs?

- Breathing air containing PAHs in the workplace of coking, coal-tar, and asphalt production plants; smoke-houses; and municipal trash incineration facilities.
- Breathing air containing PAHs from cigarette smoke, wood smoke, vehicle exhausts, asphalt roads, or agricultural burn smoke.
- Coming in contact with air, water, or soil near hazardous waste sites.
- Eating grilled or charred meats; contaminated cereals, flour, bread, vegetables, fruits, meats; and processed or pickled foods.
- Drinking contaminated water or cow's milk.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

- ❑ Nursing infants of mothers living near hazardous waste sites may be exposed to PAHs through their mother's milk.

### How can PAHs affect my health?

Mice that were fed high levels of one PAH during pregnancy had difficulty reproducing and so did their offspring. These offspring also had higher rates of birth defects and lower body weights. It is not known whether these effects occur in people.

Animal studies have also shown that PAHs can cause harmful effects on the skin, body fluids, and ability to fight disease after both short- and long-term exposure. But these effects have not been seen in people.

### How likely are PAHs to cause cancer?

The Department of Health and Human Services (DHHS) has determined that some PAHs may reasonably be expected to be carcinogens.

Some people who have breathed or touched mixtures of PAHs and other chemicals for long periods of time have developed cancer. Some PAHs have caused cancer in laboratory animals when they breathed air containing them (lung cancer), ingested them in food (stomach cancer), or had them applied to their skin (skin cancer).

### Is there a medical test to show whether I've been exposed to PAHs?

In the body, PAHs are changed into chemicals that can attach to substances within the body. There are special tests that can detect PAHs attached to these substances in body tissues or blood. However, these tests cannot tell whether any

health effects will occur or find out the extent or source of your exposure to the PAHs. The tests aren't usually available in your doctor's office because special equipment is needed to conduct them.

### Has the federal government made recommendations to protect human health?

The Occupational Safety and Health Administration (OSHA) has set a limit of 0.2 milligrams of PAHs per cubic meter of air ( $0.2 \text{ mg/m}^3$ ). The OSHA Permissible Exposure Limit (PEL) for mineral oil mist that contains PAHs is  $5 \text{ mg/m}^3$  averaged over an 8-hour exposure period.

The National Institute for Occupational Safety and Health (NIOSH) recommends that the average workplace air levels for coal tar products not exceed  $0.1 \text{ mg/m}^3$  for a 10-hour workday, within a 40-hour workweek. There are other limits for workplace exposure for things that contain PAHs, such as coal, coal tar, and mineral oil.

### Glossary

Carcinogen: A substance that can cause cancer.

Ingest: Take food or drink into your body.

### References

Agency for Toxic Substances and Disease Registry (ATSDR). 1995. Toxicological profile for polycyclic aromatic hydrocarbons. Atlanta, GA: U.S. Department of Health and Human Services, Public Health Service.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop E-29, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 404-498-0093. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html> ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about trichloroethylene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Trichloroethylene is a colorless liquid which is used as a solvent for cleaning metal parts. Drinking or breathing high levels of trichloroethylene may cause nervous system effects, liver and lung damage, abnormal heartbeat, coma, and possibly death. Trichloroethylene has been found in at least 852 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).

### What is trichloroethylene?

Trichloroethylene (TCE) is a nonflammable, colorless liquid with a somewhat sweet odor and a sweet, burning taste. It is used mainly as a solvent to remove grease from metal parts, but it is also an ingredient in adhesives, paint removers, typewriter correction fluids, and spot removers.

Trichloroethylene is not thought to occur naturally in the environment. However, it has been found in underground water sources and many surface waters as a result of the manufacture, use, and disposal of the chemical.

### What happens to trichloroethylene when it enters the environment?

- ❑ Trichloroethylene dissolves a little in water, but it can remain in ground water for a long time.
- ❑ Trichloroethylene quickly evaporates from surface water, so it is commonly found as a vapor in the air.
- ❑ Trichloroethylene evaporates less easily from the soil than from surface water. It may stick to particles and remain for a long time.
- ❑ Trichloroethylene may stick to particles in water, which will cause it to eventually settle to the bottom sediment.
- ❑ Trichloroethylene does not build up significantly in

plants and animals.

### How might I be exposed to trichloroethylene?

- ❑ Breathing air in and around the home which has been contaminated with trichloroethylene vapors from shower water or household products such as spot removers and typewriter correction fluid.
- ❑ Drinking, swimming, or showering in water that has been contaminated with trichloroethylene.
- ❑ Contact with soil contaminated with trichloroethylene, such as near a hazardous waste site.
- ❑ Contact with the skin or breathing contaminated air while manufacturing trichloroethylene or using it at work to wash paint or grease from skin or equipment.

### How can trichloroethylene affect my health?

Breathing small amounts may cause headaches, lung irritation, dizziness, poor coordination, and difficulty concentrating.

Breathing large amounts of trichloroethylene may cause impaired heart function, unconsciousness, and death. Breathing it for long periods may cause nerve, kidney, and liver damage.

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

Drinking large amounts of trichloroethylene may cause nausea, liver damage, unconsciousness, impaired heart function, or death.

Drinking small amounts of trichloroethylene for long periods may cause liver and kidney damage, impaired immune system function, and impaired fetal development in pregnant women, although the extent of some of these effects is not yet clear.

Skin contact with trichloroethylene for short periods may cause skin rashes.

### How likely is trichloroethylene to cause cancer?

Some studies with mice and rats have suggested that high levels of trichloroethylene may cause liver, kidney, or lung cancer. Some studies of people exposed over long periods to high levels of trichloroethylene in drinking water or in workplace air have found evidence of increased cancer. Although, there are some concerns about the studies of people who were exposed to trichloroethylene, some of the effects found in people were similar to effects in animals.

In its 9<sup>th</sup> Report on Carcinogens, the National Toxicology Program (NTP) determined that trichloroethylene is “reasonably anticipated to be a human carcinogen.” The International Agency for Research on Cancer (IARC) has determined that trichloroethylene is “probably carcinogenic to humans.”

### Is there a medical test to show whether I've been exposed to trichloroethylene?

If you have recently been exposed to trichloroethylene, it can be detected in your breath, blood, or urine. The breath test, if it is performed soon after exposure, can tell if you have been exposed to even a small amount of trichloroethylene.

Exposure to larger amounts is assessed by blood

and urine tests, which can detect trichloroethylene and many of its breakdown products for up to a week after exposure. However, exposure to other similar chemicals can produce the same breakdown products, so their detection is not absolute proof of exposure to trichloroethylene. This test isn't available at most doctors' offices, but can be done at special laboratories that have the right equipment.

### Has the federal government made recommendations to protect human health?

The EPA has set a maximum contaminant level for trichloroethylene in drinking water at 0.005 milligrams per liter (0.005 mg/L) or 5 parts of TCE per billion parts water.

The EPA has also developed regulations for the handling and disposal of trichloroethylene.

The Occupational Safety and Health Administration (OSHA) has set an exposure limit of 100 parts of trichloroethylene per million parts of air (100 ppm) for an 8-hour workday, 40-hour workweek.

### Glossary

Carcinogenicity: The ability of a substance to cause cancer.

CAS: Chemical Abstracts Service.

Evaporate: To change into a vapor or gas.

Milligram (mg): One thousandth of a gram.

Nonflammable: Will not burn.

ppm: Parts per million.

Sediment: Mud and debris that have settled to the bottom of a body of water.

Solvent: A chemical that dissolves other substances.

### References

This ToxFAQs information is taken from the 1997 Toxicological Profile for Trichloroethylene (update) produced by the Agency for Toxic Substances and Disease Registry, Public Health Service, U.S. Department of Health and Human Services, Public Health Service in Atlanta, GA.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop F-32, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 770-488-4178. ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>. ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about toluene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Exposure to toluene occurs from breathing contaminated workplace air, in automobile exhaust, some consumer products paints, paint thinners, fingernail polish, lacquers, and adhesives. Toluene affects the nervous system. Toluene has been found at 959 of the 1,591 National Priority List sites identified by the Environmental Protection Agency

### What is toluene?

Toluene is a clear, colorless liquid with a distinctive smell. Toluene occurs naturally in crude oil and in the tolu tree. It is also produced in the process of making gasoline and other fuels from crude oil and making coke from coal.

Toluene is used in making paints, paint thinners, fingernail polish, lacquers, adhesives, and rubber and in some printing and leather tanning processes.

### What happens to toluene when it enters the environment?

Toluene enters the environment when you use materials that contain it. It can also enter surface water and groundwater from spills of solvents and petroleum products as well as from leaking underground storage tanks at gasoline stations and other facilities.

When toluene-containing products are placed in landfills or waste disposal sites, the toluene can enter the soil or water near the waste site.

Toluene does not usually stay in the environment long.

Toluene does not concentrate or buildup to high levels in animals.

### How might I be exposed to toluene?

Breathing contaminated workplace air or automobile exhaust.

Working with gasoline, kerosene, heating oil, paints, and lacquers.

Drinking contaminated well-water.

Living near uncontrolled hazardous waste sites containing toluene products.

### How can toluene affect my health?

Toluene may affect the nervous system. Low to moderate levels can cause tiredness, confusion, weakness, drunken-type actions, memory loss, nausea, loss of appetite, and

**ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>**

hearing and color vision loss. These symptoms usually disappear when exposure is stopped.

Inhaling High levels of toluene in a short time can make you feel light-headed, dizzy, or sleepy. It can also cause unconsciousness, and even death.

High levels of toluene may affect your kidneys.

### **How likely is toluene to cause cancer?**

Studies in humans and animals generally indicate that toluene does not cause cancer.

The EPA has determined that the carcinogenicity of toluene can not be classified.

### **How can toluene affect children?**

It is likely that health effects seen in children exposed to toluene will be similar to the effects seen in adults. Some studies in animals suggest that babies may be more sensitive than adults.

Breathing very high levels of toluene during pregnancy can result in children with birth defects and retard mental abilities, and growth. We do not know if toluene harms the unborn child if the mother is exposed to low levels of toluene during pregnancy.

### **How can families reduce the risk of exposure to toluene?**

- Use toluene-containing products in well-ventilated areas.

- When not in use, toluene-containing products should be tightly covered to prevent evaporation into the air.

### **Is there a medical test to show whether I've been exposed to toluene?**

There are tests to measure the level of toluene or its breakdown products in exhaled air, urine, and blood. To determine if you have been exposed to toluene, your urine or blood must be checked within 12 hours of exposure. Several other chemicals are also changed into the same breakdown products as toluene, so some of these tests are not specific for toluene.

### **Has the federal government made recommendations to protect human health?**

EPA has set a limit of 1 milligram per liter of drinking water (1 mg/L).

Discharges, releases, or spills of more than 1,000 pounds of toluene must be reported to the National Response Center.

The Occupational Safety and Health Administration has set a limit of 200 parts toluene per million of workplace air (200 ppm).

You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about xylene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**SUMMARY: Exposure to xylene occurs in the workplace and when you use paint, gasoline, paint thinners and other products that contain it. People who breathe high levels may have dizziness, confusion, and a change in their sense of balance. This substance has been found in at least 658 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What is xylene?

(Pronounced zī'lēn)

Xylene is a colorless, sweet-smelling liquid that catches on fire easily. It occurs naturally in petroleum and coal tar and is formed during forest fires. You can smell xylene in air at 0.08–3.7 parts of xylene per million parts of air (ppm) and begin to taste it in water at 0.53–1.8 ppm.

Chemical industries produce xylene from petroleum. It's one of the top 30 chemicals produced in the United States in terms of volume.

Xylene is used as a solvent and in the printing, rubber, and leather industries. It is also used as a cleaning agent, a thinner for paint, and in paints and varnishes. It is found in small amounts in airplane fuel and gasoline.

## What happens to xylene when it enters the environment?

- Xylene has been found in waste sites and landfills when discarded as used solvent, or in varnish, paint, or paint thinners.
- It evaporates quickly from the soil and surface water into the air.

- In the air, it is broken down by sunlight into other less harmful chemicals.
- It is broken down by microorganisms in soil and water.
- Only a small amount of it builds up in fish, shellfish, plants, and animals living in xylene-contaminated water.

## How might I be exposed to xylene?

- Breathing xylene in workplace air or in automobile exhaust.
- Breathing contaminated air.
- Touching gasoline, paint, paint removers, varnish, shellac, and rust preventatives that contain it.
- Breathing cigarette smoke that has small amounts of xylene in it.
- Drinking contaminated water or breathing air near waste sites and landfills that contain xylene.
- The amount of xylene in food is likely to be low.

## How can xylene affect my health?

Xylene affects the brain. High levels from exposure for short periods (14 days or less) or long periods (more than 1 year) can cause headaches, lack of muscle coordination, dizziness, confusion, and changes in one's sense of balance. Exposure of

ToxFAQs Internet home page via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

people to high levels of xylene for short periods can also cause irritation of the skin, eyes, nose, and throat; difficulty in breathing; problems with the lungs; delayed reaction time; memory difficulties; stomach discomfort; and possibly changes in the liver and kidneys. It can cause unconsciousness and even death at very high levels.

Studies of unborn animals indicate that high concentrations of xylene may cause increased numbers of deaths, and delayed growth and development. In many instances, these same concentrations also cause damage to the mothers. We do not know if xylene harms the unborn child if the mother is exposed to low levels of xylene during pregnancy.

### How likely is xylene to cause cancer?

The International Agency for Research on Cancer (IARC) has determined that xylene is not classifiable as to its carcinogenicity in humans.

Human and animal studies have not shown xylene to be carcinogenic, but these studies are not conclusive and do not provide enough information to conclude that xylene does not cause cancer.

### Is there a medical test to show whether I've been exposed to xylene?

Laboratory tests can detect xylene or its breakdown products in exhaled air, blood, or urine. There is a high degree of agreement between the levels of exposure to xylene and the levels of xylene breakdown products in the urine. However, a urine sample must be provided very soon after exposure ends because xylene quickly leaves the body. These tests are not routinely available at your doctor's office.

### Has the federal government made recommendations to protect human health?

The EPA has set a limit of 10 ppm of xylene in drinking water.

The EPA requires that spills or accidental releases of xylenes into the environment of 1,000 pounds or more must be reported.

The Occupational Safety and Health Administration (OSHA) has set a maximum level of 100 ppm xylene in workplace air for an 8-hour workday, 40-hour workweek.

The National Institute for Occupational Safety and Health (NIOSH) and the American Conference of Governmental Industrial Hygienists (ACGIH) also recommend exposure limits of 100 ppm in workplace air.

NIOSH has recommended that 900 ppm of xylene be considered immediately dangerous to life or health. This is the exposure level of a chemical that is likely to cause permanent health problems or death.

### Glossary

Evaporate: To change from a liquid into a vapor or a gas.

Carcinogenic: Having the ability to cause cancer.

CAS: Chemical Abstracts Service.

ppm: Parts per million.

Solvent: A liquid that can dissolve other substances.

### References

Agency for Toxic Substances and Disease Registry (ATSDR). 1995. Toxicological profile for xylenes (update). Atlanta, GA: U.S. Department of Health and Human Services, Public Health Service.

This fact sheet answers the most frequently asked health questions (FAQs) about arsenic. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS: Exposure to higher than average levels of arsenic occurs mostly in the workplace, near hazardous waste sites, or in areas with high natural levels. At high levels, inorganic arsenic can cause death. Exposure to lower levels for a long time can cause a discoloration of the skin and the appearance of small corns or warts. Arsenic has been found at 1,014 of the 1,598 National Priority List sites identified by the Environmental Protection Agency (EPA).**

### What is arsenic?

Arsenic is a naturally occurring element widely distributed in the earth's crust. In the environment, arsenic is combined with oxygen, chlorine, and sulfur to form inorganic arsenic compounds. Arsenic in animals and plants combines with carbon and hydrogen to form organic arsenic compounds.

Inorganic arsenic compounds are mainly used to preserve wood. Organic arsenic compounds are used as pesticides, primarily on cotton plants.

### What happens to arsenic when it enters the environment?

- Arsenic cannot be destroyed in the environment. It can only change its form.
- Arsenic in air will settle to the ground or is washed out of the air by rain.
- Many arsenic compounds can dissolve in water.
- Fish and shellfish can accumulate arsenic, but the arsenic in fish is mostly in a form that is not harmful.

### How might I be exposed to arsenic?

- Eating food, drinking water, or breathing air containing arsenic.
- Breathing contaminated workplace air.
- Breathing sawdust or burning smoke from wood treated with arsenic.
- Living near uncontrolled hazardous waste sites containing arsenic.
- Living in areas with unusually high natural levels of arsenic in rock.

### How can arsenic affect my health?

Breathing high levels of inorganic arsenic can give you a sore throat or irritated lungs. Ingesting high levels of inorganic arsenic can result in death. Lower levels of arsenic can cause nausea and vomiting, decreased production of red and white blood cells, abnormal heart rhythm, damage to blood vessels, and a sensation of "pins and needles" in hands and feet.

Ingesting or breathing low levels of inorganic arsenic for a long time can cause a darkening of the skin and the

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

appearance of small “corns” or “warts” on the palms, soles, and torso.

Skin contact with inorganic arsenic may cause redness and swelling.

Organic arsenic compounds are less toxic than inorganic arsenic compounds. Exposure to high levels of some organic arsenic compounds may cause similar effects as inorganic arsenic.

### How likely is arsenic to cause cancer?

Several studies have shown that inorganic arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer. The World Health Organization (WHO), the Department of Health and Human Services (DHHS), and the EPA have determined that inorganic arsenic is a human carcinogen.

### How can arsenic affect children?

We do not know if exposure to arsenic will result in birth defects or other developmental effects in people. Birth defects have been observed in animals exposed to inorganic arsenic.

It is likely that health effects seen in children exposed to high amounts of arsenic will be similar to the effects seen in adults.

### How can families reduce the risk of exposure to arsenic?

- If you use arsenic-treated wood in home projects, you should wear dust masks, gloves, and protective clothing to decrease exposure to sawdust.
- If you live in an area with high levels of arsenic in water or soil, you should use cleaner sources of water and limit contact with soil.

### Is there a medical test to show whether I've been exposed to arsenic?

There are tests to measure the level of arsenic in blood, urine, hair, or fingernails. The urine test is the most reliable test for arsenic exposure within the last few days. Tests on hair and fingernails can measure exposure to high levels of arsenic over the past 6-12 months. These tests can determine if you have been exposed to above-average levels of arsenic. They cannot predict how the arsenic levels in your body will affect your health.

### Has the federal government made recommendations to protect human health?

EPA has set limits on the amount of arsenic that industrial sources can release to the environment and has restricted or canceled many uses of arsenic in pesticides. EPA has set a limit of 0.01 parts per million (ppm) for arsenic in drinking water.

The Occupational Safety and Health Administration has set limits of 10 µg arsenic per cubic meter of workplace air (10 µg/m<sup>3</sup>) for 8 hour shifts and 40 hour work weeks.

### Source of Information

Agency for Toxic Substances and Disease Registry (ATSDR). 2000. Toxicological Profile for Arsenic. Atlanta, GA: U.S. Department of Health and Human Services, Public Health Service.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop F-32, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 770-488-4178. ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>. ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

**APPENDIX B**  
**WEST NILE VIRUS/ST. LOUIS ENCEPHALITIS PREVENTION**

## WEST NILE VIRUS/ST. LOUIS ENCEPHALITIS PREVENTION

The following section is based upon information provided by the CDC Division of Vector-Borne Infectious Diseases. Symptoms of West Nile Virus include fever, headache, and body aches, occasionally with skin rash and swollen lymph glands, with most infections being mild. More severe infection may be marked by headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, convulsions, muscle weakness, paralysis, and, rarely, death. Most infections of St. Louis encephalitis are mild without apparent symptoms other than fever with headache. More severe infection is marked by headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, occasional convulsions (especially infants) and spastic (but rarely flaccid) paralysis. The only way to avoid infection of West Nile Virus and St. Louis encephalitis is to avoid mosquito bites. To reduce the chance of mosquito contact:

- Stay indoors at dawn, dusk, and in the early evening.
- Wear long-sleeved shirts and long pants whenever you are outdoors.
- Spray clothing with repellents containing permethrin or DEET (N, N-diethyl-meta-toluamide), since mosquitoes may bite through thin clothing.
- Apply insect repellent sparingly to exposed skin. An effective repellent will contain 35% DEET. DEET in high concentrations (greater than 35%) provides no additional protection.
- Repellents may irritate the eyes and mouth.
- Whenever you use an insecticide or insect repellent, be sure to read and follow the manufacturer's directions for use, as printed on the product.

**EMERGENCY HAND SIGNALS**

## EMERGENCY SIGNALS

In most cases, field personnel will carry portable radios for communication. If this is the case, a transmission that indicates an emergency will take priority over all other transmissions. All other site radios will yield the frequency to the emergency transmissions.

Where radio communications is not available, the following air-horn and/or hand signals will be used:

### EMERGENCY HAND SIGNALS

**OUT OF AIR, CAN'T BREATHE!**

**Hand gripping throat**

**LEAVE AREA IMMEDIATELY,  
NO DEBATE!**

**(No Picture) Grip partner's wrist or place both hands around waist**

## 1.0 INTRODUCTION

AKRF, Inc. (AKRF) conducted a Subsurface (Phase II) Investigation of portions of the American Museum of Natural History (AMNH or the Museum) and Theodore Roosevelt Park, related to the proposed construction of the Gilder Center, which entails partial or full demolition of portions of the Museum including Sections 1, 7A, 8, 11, 11A, 11B, 15, 15A, 16, and 17, Weston Pavilion, adjacent Museum yards, and an approximately 75,000-square foot (SF) portion of Theodore Roosevelt Park, defined legally as Tax Block 1130, part of Lot 1. The Phase II investigation areas, along with the remainder of the Museum buildings and grounds, is located at 200 Central Park West, on New York City-owned mapped parkland under the jurisdiction of the New York City Department of Parks and Recreation (NYC Parks), as shown on Figure 1.

The scope of the Phase II investigation was established in AKRF's Subsurface (Phase II) Investigation Sampling Protocol and Health and Safety Plan, dated February 2017, and a letter of approval provided by the New York City Department of Environmental Protection (NYCDEP), dated February 27, 2017. The Phase II scope is based on the findings of AKRF's November 2016 Phase I Environmental Site Assessment (ESA) and included a geophysical survey, and the advancement of soil borings with the collection and laboratory analysis of soil, groundwater, and soil vapor samples. This report describes the methods and results of the investigation.

## 2.0 SITE BACKGROUND

### 2.1 Site Characterization

The Phase II investigation areas consist of portions of the Museum including an open air concrete-paved area (the Yard) in the western-central portion of the current Museum footprint, and landscaped areas to the north, south, and west, as shown on Figure 2.

Based on U.S. Geological Survey mapping, the Museum lies at an elevation of approximately +85 to +90 feet above the North American Vertical Datum (NAVD) of 1988 (an approximation of mean sea level), with the ground within the landscaped area sloping down to the east. The Yard was observed to be approximately 13.5 to 14.5 feet lower than the landscaped area, isolated from landscaped areas by retaining walls in the northern portion of the Yard or Museum buildings and sloped driveways to the south. For the purposes of this report, all depths to subsurface findings, including soil types, bedrock, and groundwater will be presented as existing grade relative to the landscaped area.

Based on USGS mapping, depth to bedrock in the vicinity of the Museum is anticipated to be highly variable (approximately 5 to 35 feet below existing grade relative to the landscaped area). During the Phase II investigation, evidence of weathered bedrock was observed as shallow as 2 to 3 feet below existing grade (relative to the landscaped area).

Groundwater was observed between approximately 18 and 23 feet below existing grade (relative to the landscaped area); which, based on the presence of shallow weathered bedrock, is likely to be attributed to a perched water table. Though the local topography may indicate that groundwater at the Museum might flow towards the east, groundwater in the greater area surrounding the Museum is anticipated to flow in a southwesterly direction toward the Hudson River, approximately 3,200 feet west of the Museum. Actual groundwater depth and flow beneath the Museum can be affected by many factors including the A/B/C/D Line subway tunnels approximately 450 feet east of the Museum (east-adjacent to the Museum superblock beneath Central Park West), other subsurface features or obstructions such as basements or utilities, and other factors. Groundwater in Manhattan is not used as a source of potable water.

## 2.2 Previous Environmental Investigations

AKRF is aware of two previous environmental investigations conducted for the Property:

*American Museum of Natural History – Portions of the American Museum of Natural History and Theodore Roosevelt Park, New York, New York - Phase I ESA, AKRF, November 2016*

The Phase I ESA reviewed a variety of sources including: current and historical land use maps; state and federal environmental regulatory databases; computerized New York City Fire Department and Buildings Department records; and previous studies, and included reconnaissance of the Site and its surroundings.

The Site buildings were constructed between 1902 and 2000 as parts of Museum expansions, and have been used as historically as exhibition, research, educational, and maintenance purposes associated with the Museum.

The Phase I ESA identified the following Recognized Environmental Conditions (RECs), which were further investigated during this Phase II Investigation:

- Historical petroleum and chemical storage and use at the Site that might represent RECs included:

Section 16 – One 1,080-gallon diesel aboveground storage tank (AST) located within an epoxy-coated room with secondary containment berm (i.e., a low concrete berm constructed around the perimeter of the tank);

Section 17 – One empty 250-gallon parts washer tank formerly containing trichloroethylene (TCE) (which was formerly used to remove lipids and fats from vertebrate zoology specimens), and a 500-gallon double-walled diesel AST located on the first floor (a day tank associated with the AST located in Section 16); and

Exterior yard – Approximately 17 drums (up to 55 gallons) of ethanol, isopropanol, research space waste, and diesel in secured chemical storage sheds. Chemical storage sheds included secondary containment systems, and were regularly inspected to prevent spillage. Floor drains noted in the exterior yard and other areas throughout the Site were reported to be connected to the municipal sewer system and were in good condition with no evidence of releases or spills. Spill prevention kits were also identified in the drum storage area.

Regulatory databases identified the Museum as a small quantity generator (SQG) of hazardous waste from 2005 to 2016, and historical large quantity generator (LQG) of hazardous waste from 1984 to 2005. Chemical waste was disposed of off-site by Clean Harbors, a permitted chemical waste hauler. The chemical storage areas are New York City Fire Department (FDNY)-permitted, with no evidence of a release noted on or concerning the project site.

- The Museum was registered in the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database with three ASTs and one underground storage tank (UST). Of these, two ASTs and one UST were located at the Site. These included: the two diesel ASTs discussed above; one closed-in-place 1,080-gallon double-wall steel UST with interstitial monitoring and high-level alarm in the exterior yard; and a former 50-gallon AST in Section 1, which was associated with the 1,080-gallon UST. The 50-gallon AST was registered with NYSDEC as being in-service, but was removed in September 2016. The on-site storage tanks were registered as having spill prevention measures including secondary containment in the form of curbs or double-wall construction,

interstitial alarms, and high-level alarms, and no evidence of a release on or near the Site was noted.

- Other historical uses of the Site included use of Section 17 (the Power House) as a coal-fired electric power plant in, and Section 15 as an auto house (i.e., garage) and power house. During the reconnaissance, no evidence of coal storage or residue was observed and there is, therefore, no present information indicating that the proposed project is expected to be complicated by the former presence of the power house and auto house.

The Phase I ESA also identified the following *de minimis* conditions:

- Arsenic-preserved hides were stored in dedicated areas on the fifth floor of Section 1, and on the third floor of Section 7A. Arsenic preservation was a common preservation technique for natural history collections between approximately 1930 and 1990. Preserved hides were stored in designated cabinets.
- Chemical storage in Section 8 was noted on the fifth floor in a FDNY-permitted room with a secondary containment berm. Chemicals stored included 1 liter to 5-gallons in volume of 1-butanol, ethyl alcohol, toluene, and other specimen preservation-related solvents, with no record of historic release.
- Chemical storage in Section 11B was noted on the lower level and fourth floors and included nitrate film negatives and acetate film roll storage.
- Chemical storage noted in Section 15 in the Ichthyology collections included approximately 300,000 small jars (up to five gallons) of specimens preserved in ethanol or isopropanol, large containers and drums (up to 55 gallons) of ethanol used for specimen preservation, and other containers (generally 15 gallons or less) of organic solvents and solvent wastes, with no record of historic release.
- Additional chemical storage noted in Section 17 included small containers (up to one gallon) of polyester resins, spray paints, and acids in the exhibition production shop on the fifth floor, with no record of historic release.
- In addition to the chemical storage noted above, the exterior yard was used to store 55-gallon drums of food oil waste, and liquid nitrogen in a 3,000-gallon AST, with no record of historic release.
- A proposed 30,000-gallon UST was shown on 1962 engineering plans for Section 17. However, no documentation of the UST installation was found. Museum representatives do not believe the tank was installed, and the Museum was reported to have converted from coal to Consolidated Edison steam as a heating source around the time the plans were prepared; thus, it appears the proposed UST was never installed.
- One closed-in-place 1,080-gallon double-wall UST with interstitial monitoring and high-level alarm was identified in the exterior yard. This UST was associated with the former 50-gallon day tank AST identified in Section 1.
- The following petroleum storage tanks were located in Museum areas outside of the Site boundary: one in-service 6,000-gallon double-wall fiberglass reinforced plastic UST and one in-service 200-gallon AST, both containing diesel fuel for supplying an emergency generator. These tanks were located in a courtyard in the southwestern portion of the Museum (outside of the Site boundary). No odors, staining, or spills were noted in the vicinity of the AST, and no related historical spills were documented.

- Based on the age of the Museum sections and prior subsurface investigations which identified historic fill in the northern portion of Theodore Roosevelt Park, historic fill materials may also be present beneath the Site.

Geophysical Survey, American Museum of Natural History, Hager-Richter Geoscience, Inc., March 2017

Hager-Richter Geoscience, Inc. completed a Geophysical Survey related to a geotechnical investigation lead by Langan in February 2017. The objective of the survey was to detect site utilities within the proposed redevelopment area.

- Segments of known electrical and sewer utilities, a known utility trench and small segments of possible utilities were detected. No major unknown utilities or anomalies were detected during the geophysical survey.

Geotechnical Engineering Study, American Museum of Natural History, Gilder Center, New York, New York, Langan, April 2017

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. of New York, New York (Langan) completed a Geotechnical Engineering Study to support the foundation and construction design for the proposed project.

Based upon the findings from the installation of geotechnical soil borings, groundwater wells, and test pits, the study characterized subsurface material at the Museum to consist of fill material (comprising sand with varying amounts of silt, gravel, rock fragments, and debris), underlain by sand, decomposed rock, and bedrock at varying depths. Shallow bedrock and shallow, potentially perched groundwater were noted in the subsurface.

The study concluded that any soil remaining after construction excavation would require compaction prior to shallow foundation construction, and that dewatering may be required during construction activities. A membrane-type waterproofing solution was also recommended for installation under or behind any proposed subgrade walls or slabs, which would also satisfy the vapor proofing requirements discussed in Section 4.2 of the RAP.

A copy of these previous reports are provided in Appendix A.

### 3.0 FIELD ACTIVITIES

The Phase II investigation field activities were conducted between March 27 and 30, 2017, and included a geophysical survey; the advancement of borings at ten locations with the collection and testing laboratory analysis of 18 soil samples; the installation of five temporary groundwater monitoring wells with the collection and analysis of five groundwater samples; and the installation of seven soil vapor points with the collection and analysis of seven soil vapor samples and an ambient air sample. The sampling locations are provided on Figure 2.

#### 3.1 Geophysical Survey

A geophysical survey was conducted by On Point Locating (On Point) prior to advancing the borings to clear the proposed sampling locations of subsurface utilities and to search for potential undocumented USTs. A ground-penetrating radar (GPR) and magnetometer survey was conducted throughout accessible areas of the property. A copy of the Geophysical Engineering Survey Report is included as Appendix B.

The geophysical survey identified multiple utility lines, and some boring locations were shifted within 5 to 10 feet of the initial proposed locations as necessary to avoid utility lines and other

obstructions. The survey did not identify subsurface anomalies consistent with the presence of undocumented USTs.

### 3.2 Soil Sampling

To collect the soil samples, eight soil borings (SB-1 through SB-8) were advanced using a track-mounted Geoprobe® direct push probe (DPP) unit by Cascade Drilling and Technical Services (Cascade) and two soil borings (SB-9 and SB-10) were advanced using an AMS soil auger (hand auger) at the locations noted on Figure 2. Soil cores were collected using 5-foot long, 2-inch diameter, stainless steel, macrocore, piston rod samplers fitted with an internal acetate liner and advanced to a maximum depth of 25 feet below existing grade (relative to the landscaped area).

Soil was field-screened using a photoionization detector (PID), which measures relative concentrations of volatile organic compounds (VOCs) and was calibrated at the start of the work day with 100 parts per million (ppm) isobutylene. At each boring location, AKRF field personnel recorded and documented subsurface conditions, including any evidence of contamination (i.e., odors, staining, etc.). The soil boring logs are provided in Appendix C.

Soil samples were collected from each boring for testing laboratory analysis based on any field observations (e.g., odor and staining) and/or PID readings. If no evidence of contamination (visual, odor or PID readings) was apparent, the samples were selected as follows, based on the NYCDEPs comments to the Subsurface Phase II Work Plan:

- For deep borings SB-1 to SB-8:
  - From 0 to 2 feet below existing grade; and
  - Between 2 feet below existing grade and the maximum proposed excavation depth (biased towards soil exhibiting evidence of contamination) or, if no evidence of contamination was observed, from the groundwater interface and/or the 2-foot interval below the maximum proposed excavation depth, whichever was encountered first.
- For shallow borings SB-9 and SB-10 advanced in the park, only one soil sample was collected from 0 to 2 feet below existing grade.

Soil samples were collected using dedicated or properly decontaminated sampling equipment, placed into testing laboratory-supplied containers within a chilled cooler, and submitted via courier to TestAmerica Laboratories, Inc (TestAmerica), of Edison, NJ, a New York State Environmental Laboratory Approval Program (NELAP)-certified testing laboratory. The soil samples were analyzed for Target Compound List (TCL) VOCs by United States Environmental Protection Agency (EPA) Method 8260, TCL semi-volatile organic compounds (SVOCs) by EPA Method 8270, polychlorinated biphenyls (PCBs) by EPA Method 8082, pesticides by EPA Method 8081, and Target Analyte List (TAL) metals by EPA Method 6010/6020.

### 3.3 Groundwater Sample Collection and Analysis

Groundwater monitoring wells (GW-1, GW-2, GW-4, GW-5 and GW-7) were installed in five of the soil borings (SB-1, SB-2, SB-4, SB-5 and SB-7), in areas identified in AKRF's Phase II work plan. The temporary monitoring wells consisted of 1-inch diameter polyvinyl chloride (PVC) with a 10-foot, slotted-screen interval. The wells were installed such that the 10-foot screen interval was centered about the observed water table. Monitoring well construction logs are included as Appendix D.

The monitoring wells were developed by purging a minimum of three well volumes using a peristaltic pump prior to sampling. During purging, a LaMotte 2020 turbidity meter was used to take turbidity readings every five minutes until purging requirements were met and turbidity

readings were below 50 nephelometric turbidity units (NTUs) for three consecutive readings. The monitoring wells were then sampled using the peristaltic pump. Groundwater samples were collected into testing laboratory-issued sample containers, stored in an ice-filled cooler to maintain a temperature of 4 °C, and delivered under chain-of-custody protocol by courier to TestAmerica. The samples were analyzed for VOCs by EPA Method 8260, SVOCs by EPA Method 8270, PCBs by EPA Method 8082, pesticides by EPA Method 8081, and TAL metals (both total and filtered analysis) by EPA Method 6010/6020.

### 3.4 Soil Vapor Sample Collection and Analysis

Seven soil vapor sample points (SV-1 through SV-7) were installed adjacent to seven of the soil borings (SB-1, SB-2, SB-3, SB-4, SB-5, SB-6, and SB-7) in areas identified in AKRF's Phase II work plan. At each location, a 6-inch screen implant (probe) with dedicated Teflon tubing and threaded fittings was installed to depths ranging from approximately 17 to 20 feet below existing grade (relative to the landscaped area), the proposed foundation depth. The area around the probes were backfilled with clean silica sand to 2 feet below the surface, and hydrated bentonite was used to fill the remaining void to grade to prevent short-circuiting of ambient air into the soil gas sampling point.

Prior to sampling, the soil vapor points were purged of approximately three sample volumes using a SKC PCXR8 air pump. During purging, an inverted bucket was placed over the sampling point and helium gas was introduced through a small hole in the bucket to saturate the atmosphere around the sample port with helium gas. The purged vapors were collected into a Tedlar bag and monitored using a Dielectric Technologies Model MGD-2002 portable helium detector to check for short-circuiting of ambient air into the vapor sampling point and verify the adequacy of the bentonite seal. Helium concentrations of less than the NYSDOH threshold value of 10 percent were considered sufficient to verify a tight seal. All soil vapor points passed the seal integrity tests with helium readings of not detected (ND) or significantly less than 10 percent. Purged vapors were also field-screened for VOCs using a calibrated PID.

Soil vapor probes were connected via Teflon tubing to testing laboratory-supplied, batch-certified clean 6-liter Summa<sup>®</sup> canisters equipped with one hour flow regulators. Vacuum readings were collected at the start and end of the sampling period. The samples were collected over approximately one hour or until canister vacuum was observed to have dropped between -10 and -5 inches of mercury (inHg), whichever occurred first. The canisters were labeled and shipped to Alpha Analytical Laboratories of Westborough, Massachusetts using standard chain-of-custody procedures and were analyzed for VOCs by EPA Method TO-15. Soil vapor sampling logs are provided in Appendix E.

### 3.5 Field Observations

#### Soil Sampling

Brown fine sand and silt, with some clay was observed from grade surface to the terminus of the boring, between 18 and 25 feet below existing grade (relative to the landscaped area). Weathered rock was interspersed throughout the sand and silty layer, starting as shallow as 2 feet below existing grade (relative to the landscaped area). PID readings (ranging from 1.2 to 12.2 ppm) were observed in three soil borings (SB-1, SB-6, and SB-7). No petroleum-like odors or staining were observed in any soil borings. Results of the field screening data are provided on the soil boring logs in Appendix C.

Groundwater

Groundwater was encountered in all four monitoring wells between approximately 18 and 23 feet below existing grade (relative to the landscaped area), with a potential slight gradient towards the east, based on field depth to water measurements. Petroleum-like odors or sheens were not noted in groundwater during sampling at all four monitoring wells.

Soil Vapor

Soil vapor points were screened between 17 and 20 feet below existing grade (relative to the landscaped area). Pre-sampling PID screening results ranged from 1.6 ppm at SV-3 to 13 ppm at SV-7.

## 4.0 TESTING LABORATORY ANALYTICAL RESULTS

### 4.1 Soil Analytical Results

Soil sample testing laboratory analytical results were compared to the NYSDEC 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 Soil Cleanup Objectives (SCOs) for Restricted Residential use (RRSCOs) and Commercial use (CSCOs). The CSCOs were developed for commercial uses including passive recreation uses (public uses with a limited potential for soil contact). Comparison to CSCOs also provides guidance with regard to off-site disposal of any excess soil generated during future redevelopment. Soil descriptions, observations, and PID readings were recorded on the soil boring logs provided in Appendix C. Testing laboratory analytical data sheets are included in Appendix E. Results are summarized below:

Volatile Organic Compounds (VOCs)

VOCs were not detected above the RRSCOs or CSCOs in any of the soil samples.

Acetone, a common testing laboratory contaminant, was detected in 15 soil samples at concentrations ranging from 1.4 µg/kg to 25 µg/kg, well below the RRSCO of 100,000 µg/kg and CSCO of 500,000 µg/kg. Acetone was also detected in testing laboratory blank samples, as indicated by the "B" data qualifier.

M,p-xylenes were detected in nine samples collected from borings SB-2, SB-4, SB-5, and SB-8 at concentrations ranging from 0.12 to 0.02 µg/kg, well below the RRSCO for total xylenes of 100,000 µg/kg and the CSCO for total xylenes of 500,000 µg/kg. M,p-xylenes were also detected in testing laboratory blank samples, as indicated by the "B" data qualifier.

The VOC 2-butanone was detected in four samples at concentrations ranging from 1.1 to 6.3 micrograms per kilogram (µg/kg), well below the RRSCO of 100,000 µg/kg and CSCO of 500,000 µg/kg.

Methylene chloride was detected at estimated concentrations between 0.33 µg/kg and 0.42 µg/kg in three soil samples, well below the RRSCO of 100,000 µg/kg and CSCO of 500,000 µg/kg.

Toluene was detected at an estimated concentration of 0.21 µg/kg in one sample [SB-4 (6-7)-170327], well below the RRSCO of 100,000 µg/kg and 500,000 µg/kg.

The chlorinated solvent, trichloroethene (TCE), was detected in sample SB-6(0-1)-170329 at an estimated concentration of 0.31 µg/kg, well below the RRSCO of 21,000 µg/kg and the CSCO of 200,000 µg/kg.

Low concentrations of the VOCs 1,1,2-trichloro-1,2,2-trifluoroethane, and carbon disulfide were also detected in the soil samples; however, no SCOs have been established for these analytes under NYSDEC 6 NYCRR Part 375.

Soil analytical results for VOCs are presented in Table 1a.

Semivolatile Organic Compounds (SVOCs)

Twenty-three SVOCs [2-methylnaphthalene, 4-methylphenol, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, bis(2-ethylhexyl) phthalate, carbazole, chrysene, dibenz(a,h)anthracene, dibenzofuran, di-n-butyl phthalate, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, isophorone, naphthalene, phenanthrene, and pyrene] were detected at variable concentrations in 14 of the 18 soil samples. The SVOC detections primarily consisted of polycyclic aromatic hydrocarbons (PAHs), a class of compounds most commonly found in combustion products (such as coal ash) that are frequently found in urban fill.

Five PAHs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene] were detected at concentrations above their respective RRSCOs and/or CSCOs in soil sample SB-1(1-2)-170329. Benzo(a)anthracene and benzo(b)fluoranthene were detected at respective concentrations of 1,300 µg/kg and 1,600 µg/kg, above their RRSCO of 1,000 µg/kg. Benzo(a)pyrene was detected at a concentration of 1,300 µg/kg, above its RRSCO and CSCO of 1,000 µg/kg. Dibenz(a,h)anthracene was detected at a concentration of 360 µg/kg, above its RRSCO of 330 µg/kg. Indeno(1,2,3-cd)pyrene was detected at a concentration of 1,400 µg/kg, above its RRSCO of 500 µg/kg. No other SVOCs were detected in the soil samples at concentrations above their respective RRSCOs and/or CSCOs.

Soil analytical results for SVOCs are presented in Table 1b.

Metals

Twenty metals (out of the 23 analyzed) were detected in one or more soil samples. No metals were detected above their respective RRSCOs and/or CSCOs.

Metal detections included arsenic (maximum concentration of 15.6 milligrams per kilogram (mg/kg)), chromium (maximum concentration of 30 mg/kg), copper (maximum concentration of 95.8 mg/kg), lead (maximum concentration of 143 mg/kg), mercury (maximum concentration of 0.79 mg/kg), nickel (maximum concentration of 31.3 mg/kg), silver (maximum concentration of 0.36 mg/kg), and zinc (maximum concentration of 108 mg/kg). Soil analytical results for metals are presented in Table 1c.

Polychlorinated Biphenyls (PCBs) and Pesticides

No PCBs were detected in the soil samples above testing laboratory reporting limits.

Pesticides were not detected above their respective RRSCOs and/or CSCOs. Six pesticides (4,4'-DDD, 4,4'-DDE, 4,4'-DDT, dieldrin, endosulfan II, and endosulfan sulfate) were detected in samples SB-1, SB-6, SB-7, and SB-9, with concentrations ranging from 2.4 mg/kg to 190 mg/kg. Soil analytical results for PCBs and pesticides are presented in Table 1d.

## 4.2 Groundwater Analytical Results

Groundwater sample testing laboratory analytical results were compared to the NYSDEC Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values (AWQS), including Type E aesthetic standards for protection of freshwaters. It should be noted that this is a very conservative comparison as the Class GA AWQS are drinking water standards and guidelines, as groundwater in Manhattan is not used as a potable water source. Testing laboratory analytical data sheets are included in Appendix E.

Volatile Organic Compounds (VOCs)

VOCs were detected in two of the five groundwater samples (GW-2-170327 and GW-4-170327). Cis-1,2-dichloroethene (cis-1,2-DCE) was detected in sample GW-2-170327 at a concentration of 9.5 micrograms per liter ( $\mu\text{g/L}$ ), above the AWQS of 5  $\mu\text{g/L}$ . Tetrachloroethene (PCE) was detected in sample GW-2-170327 at a concentration of 11  $\mu\text{g/L}$ , above the AWQS of 5  $\mu\text{g/L}$ . TCE, trans-1,2-DCE, and vinyl chloride were also detected in sample GW-2-170327 at concentrations below their respective Class GA AWQSs.

Cis-1,2-DCE and PCE were also detected in groundwater sample GW-4-170327 at concentrations of 2.5  $\mu\text{g/L}$  and 1.2  $\mu\text{g/L}$ , respectively, below their respective Class GA AWQSs. TCE was also detected in sample GW-4-170327 at a concentration of 0.32  $\mu\text{g/L}$ , below the Class GA AWQS of 5  $\mu\text{g/L}$ . Trans-1,2-DCE and vinyl chloride were not detected in sample GW-4-170327.

The VOCs acetone, chloroform, dichlorodifluoromethane, MTBE, m,p-xylene, and toluene were also detected in groundwater samples collected from MW-2 and MW-4, at trace concentrations well below their respective Class GA AWQS. No other VOCs were detected in any of the groundwater samples. VOCs were not detected in either of the aqueous trip blanks.

Groundwater analytical results for VOCs are presented in Table 2a.

Semivolatile Organic Compounds (SVOCs)

The SVOC naphthalene was detected in groundwater samples GW-1-170329 and GW-4-170327 at estimated concentrations of 2.4  $\mu\text{g/L}$  and 1.9  $\mu\text{g/L}$ , respectively, below its AWQS of 10  $\mu\text{g/L}$ . Phenanthrene was detected in samples GW-1-170329 and GW-4-170327 at estimated concentrations of 0.97  $\mu\text{g/L}$  and 1.5  $\mu\text{g/L}$ , respectively, below its AWQS of 50  $\mu\text{g/L}$ . SVOCs were not detected in the remaining groundwater samples at concentrations above testing laboratory reporting limits.

Groundwater analytical results for VOCs are presented in Table 2b.

Metals

Twenty-one metals were detected in the unfiltered groundwater samples (total metals analysis). Of the detections, 11 metals (beryllium, chromium, copper, iron, lead, magnesium, manganese, mercury, nickel, sodium, and thallium), were detected at concentrations above their respective AWQS in at least one groundwater sample. Beryllium was detected in sample GW-1-170329 at a concentration of 5.6  $\mu\text{g/L}$ , above its AWQS of 3  $\mu\text{g/L}$ . Chromium was detected in sample GW-1-170329 at a concentration of 117  $\mu\text{g/L}$ , above its AWQS of 50  $\mu\text{g/L}$ . Copper was detected in sample GW-1-170329 at a concentration of 201  $\mu\text{g/L}$ , above its AWQS of 50  $\mu\text{g/L}$ . Iron was detected in all five groundwater samples at concentrations ranging from 1,160  $\mu\text{g/L}$  to 108,000  $\mu\text{g/L}$ , above the Class GA Type E standard of 300  $\mu\text{g/L}$ . Lead was detected in sample GW-1-170329 at a concentration of 345  $\mu\text{g/L}$ , above its AWQS of 25  $\mu\text{g/L}$ . Magnesium was detected in sample GW-2-170327 at a concentration of 55,300  $\mu\text{g/L}$ , above its AWQS of 35,000  $\mu\text{g/L}$ . Manganese was detected above the Class GA Type E standard of 300  $\mu\text{g/L}$  in all groundwater samples except for GW-5-170328 at concentrations ranging from 2,530  $\mu\text{g/L}$  to 5,700  $\mu\text{g/L}$ . Mercury was detected in sample GW-1-170329 at a concentration of 1.7  $\mu\text{g/L}$ , above its AWQS of 0.7  $\mu\text{g/L}$ . Nickel was detected in sample GW-1-170329 at a concentration of 107  $\mu\text{g/L}$ , above its AWQS of 100  $\mu\text{g/L}$ . Sodium was detected in all five groundwater samples at concentrations ranging from 21,800  $\mu\text{g/L}$  to 287,000  $\mu\text{g/L}$ , above its AWQS of 20,000  $\mu\text{g/L}$ . Thallium was detected in sample GW-1-170329 at a concentration of 1.7  $\mu\text{g/L}$ , above its AWQS of 0.5  $\mu\text{g/L}$ .

Sixteen metals were detected in the filtered groundwater samples (dissolved metals analysis). Generally, concentrations of metals in the dissolved analysis were lower than those in the total

analysis, with the exception of calcium, potassium, and sodium. Of the detections, four metals (iron, magnesium, manganese, and sodium), were detected at concentrations above their respective AWQS in at least one groundwater sample. Iron was detected in three samples (GW-2-170327, GW-5-170328, and GW-7-170330) at concentrations ranging from 352 µg/L to 448 µg/L, above the Class GA Type E standard of 300 µg/L. Magnesium was detected in sample GW-2-170327 and GW-4-170327 at concentrations of 52,100 µg/L and 36,300 µg/L, respectively, above its AWQS of 35,000 µg/L. Manganese was detected in all groundwater samples above the Class GA Type E standard of 300 µg/L except for GW-5-170328 at concentrations ranging from 378 µg/L to 5,240 µg/L. Sodium was detected in all five groundwater samples at concentrations ranging from 22,300 µg/L to 272,000 µg/L, above its AWQS of 20,000 µg/L.

Groundwater analytical results for metals are presented in Table 2c.

#### Polychlorinated Biphenyls (PCBs) and Pesticides

No PCBs or pesticides were detected in the groundwater samples above testing laboratory reporting limits. Groundwater analytical results for metals are presented in Table 2d.

### **4.3 Soil Vapor Analytical Results**

Since there are no regulatory guidance values for VOCs in soil vapor, soil vapor testing laboratory analytical results were compared to the New York State Department of Health (NYSDOH) Indoor Air Guidance Values (AGVs) of the *Final Guidance for Evaluation Soil Vapor Intrusion in the State of New York*, dated October 2006, as revised in the September 2013 and August 2015 fact sheets for PCE and TCE.

Twenty-nine VOCs were detected in the soil vapor and ambient air samples. at individual concentrations up to 140 micrograms per cubic meter (µg/m<sup>3</sup>). TCE was detected above the AGV of 2 µg/m<sup>3</sup> in soil vapor sample SV-5-170328, at a concentration of 4 µg/m<sup>3</sup>. TCE was also detected in soil vapor sample SV-2-170328 at a concentration of 1 µg/m<sup>3</sup>. Acetone, a common testing laboratory contaminant, was detected in all soil vapor samples and in the ambient air sample at concentrations ranging from 75 µg/m<sup>3</sup> to 3,700 µg/m<sup>3</sup>. Many of the detected VOCs were also detected in the ambient air sample. Soil vapor and ambient air analytical results are presented in Table 3.

## 5.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF, Inc. (AKRF) conducted a Subsurface (Phase II) Investigation of portions of the American Museum of Natural History (AMNH or the Museum) and Theodore Roosevelt Park, related to the proposed construction of the Gilder Center, which entails partial or full demolition of portions of the Museum including Sections 1, 7A, 8, 11, 11A, 11B, 15, 15A, 16, and 17, Weston Pavilion, adjacent Museum yards, and an approximately 75,000-square foot (SF) portion of Theodore Roosevelt Park, defined legally as Tax Block 1130, part of Lot 1. The Phase II investigation area, along with the remainder of the Museum buildings and grounds, is located at 200 Central Park West, on New York City-owned mapped parkland under the jurisdiction of the New York City Department of Parks and Recreation (NYC Parks).

The scope of the Phase II investigation was established in AKRF's Subsurface (Phase II) Investigation Sampling Protocol and Health and Safety Plan, dated February 2017, and a letter of approval provided by the New York City Department of Environmental Protection (NYCDEP), dated February 27, 2017. The Phase II scope is based on the findings of AKRF's November 2016 Phase I Environmental Site Assessment (ESA) and included a geophysical survey, and the advancement of soil borings with the collection and testing laboratory analysis of soil, groundwater, and soil vapor samples. The following conclusions and recommendations are based upon the findings described in this report, but are subject to the Limitations described in Sections 6.0.

Brown fine sand and silt, with some clay was observed from grade surface to the terminus of each boring (between 18 and 25 feet below existing grade relative to the landscaped area). Weathered bedrock was interspersed throughout the sand and silt layer, starting as shallow as 2 feet below existing grade (relative to the grade of the landscaped area). Groundwater in the investigation area was encountered between approximately 19 and 24 feet below existing grade (relative to the landscaped area), and based on local topography, is expected to flow in an easterly direction. Based on the presence of weathered bedrock at shallow depths throughout the investigation areas, the observed groundwater may be attributed to water tables perched above a shallow bedrock layer. Groundwater in this part of Manhattan is not used as a potable source.

### Conclusions

- The geophysical survey identified multiple utility lines, and some boring locations were shifted within 5 to 10 feet of the initial proposed locations as necessary to avoid utility lines and other obstructions. The geophysical survey did not identify subsurface anomalies consistent with the presence of undocumented USTs.
- During field screening of soil samples, PID readings ranging from approximately 1 to 12 ppm were noted in three soil borings. Soil samples were biased toward intervals with PID detections. No petroleum-like odors, sheens, staining or other potential signs of soil contamination were observed during the Phase II investigation.
- Groundwater was observed between approximately 19 and 24 feet below existing grade (relative to the landscaped area) and, based on the presence of weathered bedrock in soil borings, may be attributed to a perched water table. No odors, sheens, or other potential signs of groundwater contamination were observed during the Phase II investigation.
- No VOCs were detected in soil samples above their respective NYSDEC Part 375 RRSCOs or CSCOs. A trace TCE detection was identified at sample location SB-6 at a depth between 0 and 1 feet below grade. TCE was not detected in any other soil samples, and the TCE detection at SB-6 is not indicative of on-site TCE contamination of significance.

- Multiple SVOCs, primarily comprising PAHs, were detected in 14 of 18 soil samples. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene were detected at concentrations above their respective RRSCOs in soil sample SB-1(1-2)-170329, with the benzo(a)pyrene detection above the CSCO as well. The exceedances were not significantly above the RRSCOs and CSCOs however, and were at concentrations typical of soil at many urban sites, including throughout Manhattan. These detections will be addressed by the provisions specified in the Remedial Action Plan (RAP).
- No metals, PCBs, or pesticides were detected in soil samples above their respective RRSCOs and CSCOs. Metals detections were at concentrations typical of soil at urban sites. Pesticides were detected at sampling locations in landscaped areas of the Park, making it likely that the low pesticide detections were attributable to grounds keeping activities. These detections will be addressed by the provisions specified in the RAP.
- PCE and cis-1,2-DCE were detected in one groundwater sample at concentrations slightly above their respective Class GA AWQS. No other VOCs were detected above their respective Class GA AWQS. These detections will be addressed by the provisions specified in the RAP.
- No SVOCs were detected at concentrations above their respective Class GA AWQSs. No PCBs or pesticides were detected in groundwater samples above testing laboratory reporting limits.
- Metals were detected in the filtered and unfiltered groundwater samples, with 21 Class GA AWQS exceedances in unfiltered samples, and 16 Class GA AWQS exceedances in the filtered samples, indicating that concentrations of at least five metals (beryllium, chromium, lead, mercury, and nickel) were attributable to metals absorbed to suspended solids in the unfiltered groundwater samples. The metals detections were typical of groundwater at many urban sites, including throughout Manhattan. These detections will be addressed by the provisions specified in the RAP.
- TCE was detected in soil vapor at one location at a concentration of 4  $\mu\text{g}/\text{m}^3$ , slightly exceeding the NYSDOH Air Guideline Value for indoor air quality of 2  $\mu\text{g}/\text{m}^3$ . No other VOCs were detected above the NYSDOH Air Guideline Values for indoor air quality and the remaining VOC detections were relatively low and typical of soil vapor at many urban sites, including throughout Manhattan. The NYSDOH Air Guideline Values for indoor air quality are guidance values for protection of indoor air quality and not intended to be used for direct comparison of soil vapor concentrations, which are expected to decrease due to retardation, decay, and dilution in the subsurface (collectively referred to as site-specific attenuation factors) prior to impacting any enclosed spaces. Based upon the soil vapor sampling data collected as part of this Phase II Investigation and the site-specific attenuation factors, the existing conditions pose a minimal risk for vapor intrusion for the existing buildings and proposed Gilder Center construction, which will be controlled by the provisions specified in the RAP.

Detections in soil, groundwater, and soil vapor were generally at concentrations either below or not significantly elevated above their respective regulatory guidance. As such, the following recommendations to be implemented during any future construction activities are expected to fully address any potential concerns related to any contamination identified in this Phase II report:

- To address the known and potential unexpected contamination during redevelopment, a RAP and associated Construction Health and Safety Plan (CHASP) should be prepared for implementation during proposed construction and submitted to NYCDEP for review and approval, which will summarize environmental mitigation measures, including pre-construction ACM surveys, soil stockpiling, soil disposal and transportation; dust control; contingency measures if additional petroleum storage tanks or other contamination should be unexpectedly encountered; and a minimum two foot clean fill buffer in any landscaped or uncapped areas, designed to control or avoid the

potential for human or environmental exposure to known or unexpectedly encountered hazardous materials during and following construction of the proposed project. The CHASP should include measures for worker and community protection, including personal protective equipment, dust control, air monitoring, and emergency response procedures.

- During any subsurface disturbance, surplus excavated soil and debris will be handled and disposed of in accordance with applicable regulatory requirements. All material intended for off-site disposal will be characterized and managed in accordance with the requirements of the intended receiving facility and applicable laws. Evidence of a spill (if any) located or found during future investigation or disturbance will be reported to NYSDEC and addressed in accordance with applicable requirements.
- During construction of the proposed project, any unexpectedly encountered USTs (or buried former ASTs) will be properly closed and/or removed in accordance with applicable regulations.
- Groundwater sampled during the Phase II investigation contained low levels of VOCs. Construction dewatering during construction will be permitted prior to discharging, and conducted in accordance with NYCDEP sewer discharge requirements.
- This investigation did not reveal substantial concerns related to vapor intrusion. However, as the proposed project is expected to extend beyond the observed groundwater table, a waterproofing membrane, such as the sheet-applied Grace Preprufe® product line, will be installed as part of foundation construction.

## 6.0 LIMITATIONS

The scope of the Phase II investigation was established in AKRF's Subsurface (Phase II) Investigation Sampling Protocol and Health and Safety Plan, dated February 2017, and in a letter of approval provided by the NYCDEP, dated February 27, 2017. The Phase II scope is also based on the findings of AKRF's November 2016 Phase I ESA, and included a geophysical survey, the advancement of soil borings, and the collection and laboratory analysis of soil, groundwater, and soil vapor samples. No significant deviations from the Sampling Protocol were required during the investigation.

The findings set forth in this report are strictly limited in time to the date of the investigation described herein, and in scope to the investigation requirements as defined in the NYCDEP-approved Subsurface (Phase II) Investigation Sampling Protocol and Health and Safety Plan. The conclusions and recommendations presented in the report are based solely on the services and any limitations described in this report.

This report contains conclusions that are based on the analysis of data collected at the time and locations noted in the report through intrusive or non-intrusive sampling. However, further investigation might reveal additional data or variations of the current data, which may differ from our understanding of the conditions presented in this report, and may require the enclosed recommendations to be reevaluated or modified.

Chemical analyses have been performed for specific parameters during the course of this investigation, as summarized in the text and tables. It should be noted that additional chemical constituents, not searched for during this investigation, may be present at the site. Due to the nature of the investigation and the limited data available, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. The presence of biological hazards, radioactive materials, lead-based paint, and asbestos-containing materials was not investigated, beyond the extent specified in the report.

Interpretations of the data, including comparison to regulatory standards, guidelines or background values, are not opinions that these comparisons are legally applicable. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage, and disposal of known or potentially contaminated materials is subject to all applicable laws, which may or may not be fully described as part of this report.

The analytical data, conclusions, and/or recommendations provided in this report should not be construed in any way as a comprehensive classification of waste that may be generated during future disturbance at the Museum. Waste(s) generated at the site, including excess soil, may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined beforehand as the data provided in this report may be insufficient and could vary following additional sampling.

This report may be based solely or partially on data collected, conducted, and provided by, AKRF and/or others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. In addition, these reports may have been based upon available previous reports, historical records, and documentation from federal, state, and local government agencies, personal interviews, and geological mapping. This report is subject, at a minimum, to the limitations of the previous reports, historical documents, availability and accuracy of collected documentation, and personal recollection of those persons interviewed. In certain instances, AKRF has been required to assume that the information provided is accurate with limited or no corroboratory evidence.

This report is intended for use solely by Venable LLP, and the American Museum of Natural History. Reliance by third parties on the information and opinions contained herein are strictly prohibited and

requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.
